T O U R

THROUGH THE ISLAND OF

GREAT BRITAIN.

DIVIDED INTO

CIRCUITS OR JOURNIES.

CONTAINING,

I. A Description of the Principal Civies and Towns, their Situation, Government, and Com-

The Customs, Manners, Exercises, Diversions, and Employments of the People.

II. The Nature and Virtue of the many Medicinal Springs with which both Parts of the United Kingdom abound.

JV. An ample Description of London, including Westminster and Southweark, their Bridges, Squares, Hospitals, Churches, Palaces, Markets, Schools, Li-

braries, Shipping in the Thames, and Trade, by means of that noble River, &c.

V. The Produce and Improvement of the Lands, the Trade, and Manufactures.

VI. The Sea-Ports and Fortifications, the Course of Rivers, and the Inland Navigation.

VII. The Public Edifices, Seats, and Palaces of the Nobility and Gentry.

VIII. The Isles of Wight, Scilly, Portland, Jersey, Guernsey, and the other English and Scotish Isles of most Note.

Interspersed with Ufeful Observations.

Particularly fitted for the Perufal of fuch as defire to Travel over the ISLAND.

Originally begun by the Celebrated DANIEL DE FOE, continued by the late Mr. RICHARDSON. Author of Clariffa, &c. and brought down to the prefent Time by Gentlemen of Eminence in the Literary World.

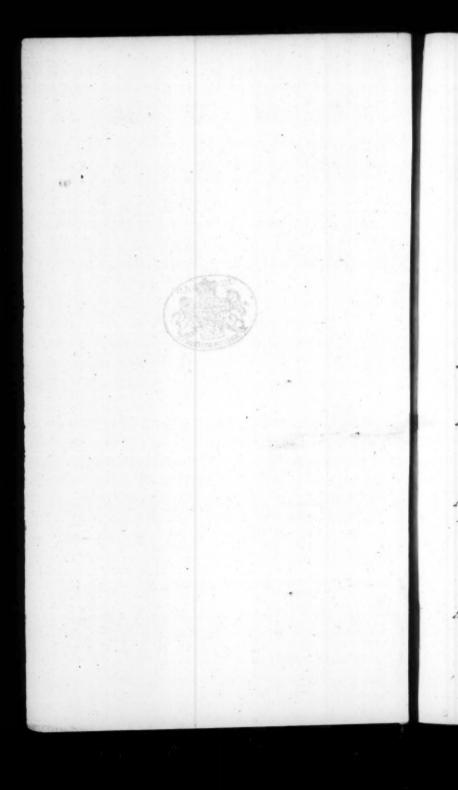

The EIGHTH EDITION,

With great Additions and Improvements.

THROUGH THAT PART OF

GREAT BRITAIN

CALLED

SCOTLAND.

LETTER I.

General DESCRIPTION of NORTH
BRITAIN.

EFORE I enter on particular descriptions of my Northern Tour, it may not be improper to take a general survey of Scotland, in order to give a brief geographical account thereof; to describe its lakes, rivers, and sisheries; its mountains, woods, and springs; its manusactures, government, customs, and manners; and such other matters as would have been improperly dispersed in different parts of the Tour, had they not been here collected, as it were, in one point of view.

Vol. IV.

B

Abrief

A brief Geographical Account of SCOTLAND.

CCOTLAND is bounded on the fouth by the Irifb fea and England, from which it is divided by Solway Firth, and the rivers Elk and Keklop; on the west border, by the Cheviot hills, in the Middle Marches; and by the lower parts of the Tweed, on the east border. On the east it is bounded by the German sea; on the north, by the Deucaledonian sea; and on the west, by the great western ocean.

. Its greatest length from Dung sby-bead, or John of Gret's-house, in Caithness, to the Mull of Galloway, towards Ireland, is no more than about 215 Scots miles: but if we reckon directly north from Dumfries, or the faid Mull of Galleway, to the utmost parts of Caithness, or Strathnavern, the length will not be fo much; and less still, if we reckon from Berwick to either of these

places.

Its breadth, from the point of Ard-na-murchan near the Isle of Mull, about the middle part of Scotland in the west, to Buchanness in the east parts, towards the north, is about 140 Scots miles; but the fea running up into the land, or the land thrusting out into the fea in many places, makes the breadth of it everywhere elfe very various and disproportionable; for in the fouth parts it is feldom 100 miles over, and in the north parts, beyond Inverness, not so many; so that there is no house above 40 or 45 miles from salt water.

Besides the main land, there are about 300 islands, fome of them very confiderable, which may be diffinguished into several classes: the western islands called Hebrides, or Ebuda, by Latin authors; the Orcades, or Orkney islands: the islands of Shetland, or Zetland;

and some few in the Firth of Forth.

The whole country abounds in lakes and rivers, many whereof, running into creeks and arms of the

ta

with

fea (which in feveral places are very wide and deep), afford great and commodious opportunities for fishing and shipping: but it is much to be regretted, that the land is neither cultivated, nor the fishing and shipping carried on and improved to so much advantage as might be expected.

Of the most remarkable Lakes and Rivers in Scotland.

SCOTLAND, or North Britain, has received from the bountiful hand of Providence, a very copious distribution of waters, and those too very happily difposed for the use and benefit of its inhabitants, infomuch that it may be with truth affirmed, that there is fearce any confiderable part of it to fituated as not to have its share of these blessings. Springs of clear and wholesome water are every-where in plenty, not only on the fides, but even on the tops of many of the mountains, and fometimes also on the bare rocks, as in the island of Buss in the Firth of Firth. These springs in their descent swell into pleasant rills, and by degrees into brooks or burns, which straying every-where through the fields, either are, or might be, eafily rendered instruments of sertility. These again, in their progress, augmenting their streams, become at length no contemptible rivers, which administer to all the purposes of domestic economy. Many of these meeting with hollow places in their passage, expand themfelves into lochs, till finding a proper channel, they refume their form of rivers.

the

fea

The lakes of Scotland (there called lochs), are too many to be particularly described. Those called loch Tay, loch Lomond, Lochness, loch Au, and one or two more, present us with such picturesque scenes as are not, probaby, to be matched in Europe, if we except Ireland. Several of these lakes are beautifully fringed

with woods, and contain plenty of fresh-water fish. The Scots sometimes give the name of a loch to an arm of the fea; as, for example, loch Tyn, which is fixty miles long, and four broad, and is famous for its excellent herrings; the loch of Spinie, near Elgin, is remarkable for its number of fivans and cygnets, which often darken the air with their flights, owing, as fome think, to the plant o'orina, which grows in its waters, with a strait stalk, and a cluster of feeds at the top. Near Lochness is a hill faid to be almost two miles perpendicular, at the top of which is a lake of fresh water, about thirty fathoms in length, but its depth could never yet be afcertained, nor does it ever freeze; whereas, but seventeen miles from thence, the lake Lochanuyn, or Green Lake, is covered with ice all the year round.

The ancient province of Lochaber receives that name from being the mouth of the lochs, by means of which the ancient Caledonians, the genuine descendants of the Celts, were probable enabled to preferve themfelves independent upon, and unmixed with the

Lowlanders.

Other lochs or lakes we shall take notice of in their respective places. The following are the principal

n

fo

ri

25

the

lan

300

nav

larg

Bul

rivers in North Britain.

The Forth is one of the most noble and commcdious rivers in Scotland. It takes its rife near the bottom of Leimon-hills, and running from west to east, receives in its paffage many confiderable streams, deriving their waters from the eminences in the midland counties.

The river Clyde rifes out of Tinto-hill, near a place called Arrick-stone, on the confines of the two thires of Peebles and Lanerk. It runs at first northwestward, till being joined by another stream, it passes by Craufurd, and runs almost directly north, through the famous moor of the same name, anciently renowned

renowned for producing gold dust and lapis lazuli, as it still is for the rich mines of lead, belonging to the Earl of Hopton. After traverfing this moor, the river declines eastward, and fetching a confiderable compals, turns again to the north-west; when receiving a large supply of water from the river Douglas, it comes to Lanerk, a royal burgh; and here is a bridge over it, of great convenience to the adjacent counties. The Clyde then leaving Hamilton at a small distance, about which there is as good oak timber as any in the island, proceeds to Glasgow, which it reaches after traverfing about 50 miles from its fource. Here, becoming both broad and deep, it continues its progress, dividing the shires of Renfrew and Dunbarton; and having passed the town of Renfrew, and soon aster received the two rivers of the name of Cart, it moves majestically on, till it also absorbs the river Levir, issuing from Loch-Lomond; and thus swelled with subsidiary streams, having passed New Port Glafgow, and Greenock, and washed a part of Argyleshire, it joins its waters to those of the fea, after a course of 70 miles

One of the greatest improvements of inland navigation that has been attempted in Great Britain, is now carrying on at a very considerable expence, by a society of public-spirited gentlemen, for joining the rivers Forth and Clyde together; by which a communication will be opened between the east and west seas, to the immense advantage of the whole kingdom, as must be evident to every person, who looks into

the map of Scotland.

The Tay is indisputably the largest river in Scotland It rises in Braidalbin on the frontiers of Lorn, and, augmented by several waters in its passage, is navigable to Perth. The Firth of Tay is not indeed so large or so commodious as that of Forth; but from Buttonness to Perth it is not less than 40 miles; and

B 3

the

the whole may be, without any great impropriety, stiled a harbour, which has Fife on one fide, and the

thires of Perth and Angus on the other.

The river of South Esk rises among the mountains in the north of Angus; and, running directly many miles south, makes an angle near the seat of the Earl of Airly, and directs its course eastward, falling at length into the German Ocean, a little below Montrose.

The rivers Dee and Don run from east to west, and fall into the German sea near Aberdeen. Both these rivers have bridges over them, at no great distance from the fall; that over the Dee consists of seven arches, and is esteemed a magnificent work: that over the Don is only of a single arch, sustained on each side by a rock, and is a most noble and surprising

piece of workmanship.

The river Devon, or Dovern, rifes not many miles north from the Don, and running through Strathbogie, in a winding course, declining however conflantly to the north-east till it reaches the town of Strath-bogie, and then runs for a few miles directly north, turns afterwards due east, at length turns again to the north; and passing many miles on one side of a beautiful country, which from thence derives the name of Strath-devon, bending a little to the west, falls at length into that part of the German ocean which is stilled Murray-Firth.

The Spey is a river of as long a course as most in North Britain. It rises in the mountains of Badenoch, in the heart of the shire of Inverness. Its waters quickly spread themselves to such an extent, as to become a small lake, called Loch-Spey; from which, resuming the form of a river, it proceeds several miles southeast; then, setching a compass, it turns north-east, and in that direction runs many miles till it reaches Ruthven; from whence digressing more to the east, and receiving many rivulets by the way, it rolls on

with

lit

be

is

w

qu

No

mo

76

Var of t

tim

with a rapid stream to Rothes; and from thence directing its course northwards, falls into the Firth of Murray, at a place called Garmach, or Garmouth, which is a creek of no great importance, frequented only by small vessels.

The Lossy rifes not many miles above the royal burgh of Elgin, in the pleasant and plentiful country of Murray, and falls into Murray Firth a few miles below it at a place called Lossy-mouth, or New-Port-

Elgin.

The river of Findorn rises in the hills of Monchrolky, where its waters quickly spread into a lake; passing out of which, and running south-west, they foon form a larger, which is called Loch-Moy. Iffuing from thence, it takes a wide compais, and paffing by Conbrugh, through which runs the great military road to Inverness, turns gradually to the north-east, becoming the boundary of the two shires into which Murray is divided, viz. Elgin and Nairn. After reeeiving many fmaller streams, croffing the wood of Tornaway, and running at a small distance from the ancient town of Forres, declining a little to the northwest, it falls into a bason, which receives likewise a leffer river that runs through Forres, and two other little streams, which make all together a better harbour than any of the former, though dry when the tide is out, and with a bar at the mouth of the river, which, however, is less apt to shift, and of confequence the harbour is fafer than most of the rest. Not far from this bay stood anciently the rich and famous abbey of Kinlos.

The river Nairn also falls into Murray-Firth. This Firth, according to Ptolemy, was the Estuarium Vararis. At the bottom of it, and on the south bank of the river Nesse, stands the town of Inverness, sometimes, as ancient writers affirm, the residence of the

Kings of Scotland.

The river Nesse is about four miles long, with a stone-bridge over it at Inverness of seven arches.

The river Connel is swelled by the water of no less than six lakes, and rolls with a copious stream into Cromertie-Firth, passing by Dingwall, an old royal burgh, near its fall, and on the south-side, at the

mouth of the Firth Stands Cromertie.

All these rivers abound with fish; and the people are very industrious in making the best use they can of the several inlets along the coast, and of the sew

and those small vessels they have.

In the county of Strathnavern, the first stream of consequence we meet with is the river Strathy, which runs out of a loch of the same denomination, and, after a course of between 20 and 30 miles, falls into a little creek, which is called Strathy Bay. Armsdale river, a large stream, but of a much shorter course, is the next; and to the west of this, lies the river Navern, slowing from a loch of the same name, the greatest body of water in this county, and from which it derives the appellation of Strathnavern.

The river Irwin rises on the border of the shire of Lanerk: and running a north-west course for about 23 miles, makes the boundary of what was called the bailiwick of Gunningham. As it falls into the sea, it meets with another considerable river from the southwest; and by the junction of both these waters is formed a convenient harbour, upon which stands the

ancient royal burgh of Irwin.

The river Aire rises on the edge of Lanerkshire, and running through the county of its own name in a west course, near 20 miles, in which space it receives many auxiliary streams, falls at length into what is

ni

be

ftr

tra

har

oui

voy

commonly called the Firth of Clyde.

The river Blainoch rises amongst the mountains which divide the shire of Aire from the county of Galloway, and running a south-east course 10 or 12 miles,

miles, turns them almost directly east, and receiving in its passage two other pretty large streams, falls into the sea at Wigton, where it meets also with the waters of the river Cree, and the opening of the shore between them constitutes what is called Wigton Bay.

The river Nethe, Nid, or Nithe, rifes in the fouth part of the shire of Aire, and running in a winding, but constantly in a fouth-east course, receives in its passage several rivers, the principal among which are the Scar and the Kairn, and falls at last, with a very full tide, into the sea, some miles below the town

of Dumfries.

The river Annan has its source at Arrick slone, near those of the Clyde and the Tweed. It is very remarkable, that though these three rivers rise as it were together, they run into different seas; the Tweed into the German ocean, the Clyde into the Irish sea, and the Annan into the Solway Firth, after passing through the stewartry of Annandale, to which it gives name, and a little below the town of Annan.

The E/k is the last river that runs into the Solway

Firth.

Thus much for the most remarkable lakes and rivers in North Britain.

Of the Fisheries in SCOTLAND.

THE greatest advantages Scotland can boast of, are its fisheries. These might prove a mine of insinite wealth to the whole island, as they have long been to the Dutch, and would add more to our strength and superiority at sea, than all our foreign traffic; for here we might breed many thousands of hardy seamen, who would always be at hand to man our sleets, when the rest are absent upon distant voyages.

B 5 Their

Their falmon fishery is very considerable in the rivers Don and Dee at Aberdeen, and in the river Clyde. The town of Renfrew has employed fixty vesse's in this fishery in a season, and great quantities are export-

ed to France and Holland.

About the northern and western islands is the finest cod-sistery in Europe, of which the Dutch and Hamburghers run away with most of the profits, the islanders selling their sist to them, there being no British merchants to take them off their hands, though there cannot be a more profitable branch of business. It is related of an English merchant, who used to buy cod-sist, and salt them upon the coast of Scotland, that in one voyage he had sour thousand of these sist cured at a penny and two pence a-piece, and sold them again at eighteen-pence and half a crown each.

Herrings abound on all the coasts of the kingdom, but especially in the western isles, which are reckoned the best and fattest, though not so large as those taken on the eastern and northern coasts. The herring-fishing on the Scots coast is accounted the best in the world, and the Dutch have got a great part of

their wealth by it.

Herrings are sometimes bought in the isles for 6d. per barrel; and when cured, and sent abroad, yield from 25 to 40s. per barrel; and sometimes 36,000 barrels of white herrings have been exported to France from Clyde in a season, besides what were exported from Dunbar, and other parts of the kingdom, to France, and other nations; which may serve as a specimen to shew how capable that trade is of improvement, especially considering the situation of the west of Scotland and the isles, from whence they may be a month sooner at market with them, than from any part of England and Holland; and, with the advantage of taking and curing them cheaper and sooner than the Dutch can possibly do, considering how far they

they have to fail backward and forward, what risques they run at sea, and what numbers of tenders they are obliged to send to and again, betwixt their own country, and their doggers, with provisions, salt, &c., they might soon be outdone in that profitable trade by the inhabitants of Great Britain, who may lie ashore at night, and land their sish as soon as caught, without any danger from tempests or enemies; many of those bays where herrings abound, being very safe for

ships to ride in.

The herring-fishery in the Forth lasts annually about two months, and is or might be of great service. They commonly employ there about 800 boats, and in them at least between 5 and 6000 men and boys. It is computed that about 40,000 barrels are caught and cured in a season. These, though lean, are very firm, sound fish, came formerly to a good market in Sweden, and are still sold with considerable profit in the Canaries, the western islands, and in several parts of America. About one sixth of these herrings may be spent at home, and the value of what is exported is modestly computed at 20,000 s.

The manner in which this fishery is carried on, renders it exceedingly beneficial to the country. The boats belong partly to the fishermen, who employ the rest of the year in catching of white fish; but the greatest part are commonly the property of ship-carpenters, and other persons on shore, who build and

equip them in the way of adventurers.

Whales in abundance frequent the islands of Fladden, Orkney, and Lewis: 114 ran ashore on the island of Orkney at one time, in the year 1691.

Cod, tufk, and ling, are caught in vast plenty upon

all their coafts.

Haddocks, sturgeon, turbot, trouts, perch, pike, scate, greybeard, mackerel, keeling, whiting, feaurchin, cat sish, cock-padle, lyths, sparlings, soles,
B 6

flukes, garvie, eels, are also caught on the Scottish coasts in great plenty for home consumption.

Otters, whose skins are useful for muffs, &c. are

very numerous in the isles.

Shell-fish of all forts, as lobsters, crabs, oysters, are also found in vast quantities in the western islands; the latter so large, that they must be cut in three or four piecs, to be eaten.

Cockles, mussels, limpets, wilks, scollops, and spouts, are cast by the tide in such numbers on the

isles, that the people cannot consume them.

Of the Cattle, Horses, Fowls, &c. of Scotland.

THE country abounds in flocks of sheep, and herds of cattle; which are generally black, except in corn-soils, where they seldom breed or keep any more than are necessary for the plough or the pail. But it is observable, that such as are bred in the corn-countries, are much larger than those bred in other parts, and equal in fize to those bred in some parts of England, even where the land seems to be better.

In general, their sheep and cattle are much smaller than those of England, especially in pasture-lands; yet are they of a far sweeter and more delicious taste than

the largest breed of the English

They have also hogs, but not in plenty, except in the north; and a great number of goats, particularly in the north and Highlands; though even there they are now comparatively scarce, owing to their disbarking the trees; the latter they eat themselves, but the former they for the most part pickle and export, as they likewise do vast quantities of salt bees.

in gentlemen's parks; but every where else they are

in great plenty.

They

2

lace

and

They breed great numbers of horses, especially in Gal'oway and the Highlands; small indeed, but capable of great satigue; especially if we consider, that they are not only more proper for the saddle, and other uses in that country, which, being hilly, will not admit in many places of teams and carriages; but are more hardy than horses of a larger size, and will thrive upon what would starve great horses. Nevertheless, in many places of the Lowlands, they can breed horses six for war, coach, or carriage.

Scotland has not only plenty of domestic fowl, such as are common to other countries, but many that are peculiar to themselves, especially in the islands, where they are in such multitudes, that the inhabitants can neither consume nor vend half of them; but their trade for them still increases, as it has done since the

Union.

Their fowl and eggs afford a large fund of trade for food, and their feathers for bedding and other uses.

Of the Linen and Woollen Manufactures of Scotland.

LAX abounds in Scotland, so that, besides what they consume themselves, they export great quantities of linen, brown and whitened; which is one of the greatest manusactures of the kingdom, and, if duly regulated and encouraged, as it is more and more since the Union, might save a great deal of money in the island, besides what it might bring into it; for the Scots have much improved their linen manusacture of late; and, besides fine linen, make very good holland, cambric, muslins, plain and striped, callicoes, damasks, ticking for beds, &c. white and dyed threads, laces, tape, &c.

Mr. Spruel (in his Account Current betwixt Scotland and England) fays, he has known, out of a pound of flax

flax of Scots growth, which cost but 12d. fix spangles of fine yarn fpun, which was fold at Glafgow at about 45. 8d per spangle; which made the product of that 12d to the spinners 28s. and, made into fine muslin, that fame pound of flax amounted to 10 or 12 dollars, which is 21. 16s. 8d. or 21. 16s. the charges of weaving and whitening deducted. He adds, that from one pound of Scots flax, lace-makers have made lace to the value of 81. sterling; which is sufficient to shew how much the linen manufacture may be improved there, and how many poor women, who are not capable of employing themselves otherwise, may get a livelihood by it, and what money it may bring into the nation.

Their hemp is also capable of being improved, not only to fave money in the island, which is exported for canvas, failcloth, &c. but also to export, and to

make nets for their fishery, and other uses.

The numerous and large flocks of flreep they have in Scotland produce abundance of wool, from whence come manufactures of feveral forts; as broad-cloth, coarfe or housewife's cloth, fingrims, serges, bays, crapes, temmin, Glasgow plaids, worsted camblets, and other stuffs, and stockings, for home-consumption and export; besides their tallow and skins. Their wool is not fo fine as that of England, by reason the country is almost every where destitute of all manner of shelter for their sheep during the winter, which is often very fevere; yet they have brought their broadcloth lately to great perfection, but can never equal England in that part of the woollen manufacture: however, it is very proper for ferges, bays, camblets, shalloons, and other stuffs; and by due regulation is capable of great improvement for a foreign trade.

An instance of what great improvement may be made of their wool, we have from Mr. Spruel (in his Account Current); viz. that they make such fine

worsted stockings at Aberdeen, that they yield 10, 15, 20, and 305. a pair for womens stockings; which shews, that they are capable of making stockings at lower rates, especially considering that they have store of very good wool brought thither from the Highlands and isles; which, because sold at the cross of Aberdeen, is commonly called cross-wool. The most remarkable places besides in Scotland, for good wool, are Galloway and Tweedale; from which great improvement might be made in bays, serges, and shalloons.

The Scots plaids are a manufacture, in which, they exceed all nations, both as to colour and fineness; but the women having disused them for garments, they are only worn by the dregs of the people; and the Highlanders being forbidden the use of them by law, the manufacture is of late greatly decreased. Their greatest trade for their woollen manufactures, and other commodities, has for many years been with the United Netherlands, where they have a Conservator, who ferves both for a conful and envoy, to take care: of the affairs of their trade, being part of the ancient privileges they enjoyed by treaties with the dukes of Burgundy and others, when fovereigns of the Netherlands. From this trade the towns of Rotterdam and Ter-veer have acquired confiderable wealth; in return) for which, the Scots have been always well effeemed in those provinces; and the states allow them churches, and maintenance for their ministers.

Of the Grain and Pulse of SCOTLAND.

THE wheat of Scotland is so excellent, that Joseph Scaliger, who had been in the country, says, no bread in Europe is comparable to what is made of it, for whiteness, lightness, and easy digestion; and I sound what he says of it to be strictly true. It is propagated every where in the Lowlands, and in all the vallies

16 GENERAL DESCRIPTION

vallies of the Highlands; and the kingdom raises not only enough for their own consumption, but for ex-

portation.

Oats are the most universal grain of the kingdom, and exceed those in England, for all uses. They thrive very well every where, and are produced in such quantities, as afford a considerable fund for export, both in grain and meal, and make very good bread and drink.

Peas they have in great plenty, both for their own confumption and for exportation; and they are fo good of the kind, that the labouring husbandmen make good nourishing bread of them.

Beans they have also in great plenty for their own

use, and for export.

Barley grows likewise very well in Scotland; but they sow more of that sort they call bear, which has four rows of grain upon an ear; whereas other barley has but two: of this they make good bread, broth, ale, and beer, and export great quantities.

Rye grows also very well in Scotland, and makes good bread; but they do not cultivate it nearly so much

as they do the grain above mentioned.

Of the Mountains, Wood, Timber, &c. of Scotland.

THE most remarkable mountains of Scotland are the Grampian mountains, which run from east to west, from near Aberdeen to Cowall in Argyleshire, almost the whole breadth of the kingdom, famous for the battle fought on them betwixt the Romans and the ancient Scots and Caledonians, under the conduct of Galgacus, as we find in Tacitus. The next most remarkable chain of mountains are those of Lammermon, which run from the eastern coast in the Merse a greatway west. Next to these are Peniland hills, which

There are many large woods of oak in Scotland, which afford materials for building and shipping, and for the husbandman's use; and the country is very improveable this way, if planting were more encouraged: however, they have at prefent not only fuch as are fit for the uses above mentioned, but also for pipeflaves and barrels; and their bark is of use to the tanners, great quantities of which are annually exported. to Ireland, and elsewhere. They have likewise ashtrees, elms, and others, fit for building, and other domestic uses; and great forests of fir, which afford materials for building and shipping; and might, with due care, afford pitch and tar, without being obliged to bring fuch large quantities from the northern countries, as is usually done by the inhabitants of Britain.

There were formerly many large woods in Scotland, among which the forest of Caledonia was famous; but

there are now not the least traces of it left.

The woods are more rare than formerly in the fouthern parts of the kingdom; of which the most remarkable now left are those of Hamilton, Calender, and Torswood: but in the north, especially in Perthsbire, Lochaber, Badenech, and Mar, there are many forests, fome of them 20, and fome 30 miles in length.

They have abundance of fruit-trees of all forts in their gardens and orchards, and might, by improvement, not only have sufficient to afford them fruit for

home

drinking and export.

THE most remarkable mineral waters in Scotland are Moffat Wells, which lie at the distance of a mile from Moffat in Annandale. These springs are fituated on the declivity of a hill, and on the brow of a precipice, with high mountains at a distance, and almost on every fide of them. The hill is the fecond from Hartfield, adjoining the highest hill in Scotland! A vein of spar runs for several miles on this range of hills, and forms the bottom and lower fides of the wells. It is a greyish spar, having polished and shining surfaces of regular figures, interspersed with glittering particles of a golden colour, which are very copious and large. These two springs are separated from each other by a small rock, the higher well lying with its mouth fouth-east. It is of an irregular fquare figure, and is about eighteen inches deep. The lower well is furrounded with naked rocks, and forms a small arch of a circle: its depth is four feet and a half; and, by a moderate computation, the two springs yield 40 loads of water in 24 hours, each load containing 64 or 68 Scotch pints: a Scotch pint is two English quarts. The higher shallow well is used for bathing, as it is not capable of being kept for clean as the lower well, on account of the shallowness and the lowness of its parts. These waters are strongly fulphureous, and refemble the scourings of a foul gun. The colour of the water is somewhat milky or bluish. The soil on every fide of the wells is thin, and the hills rocky, only just below the wells there is a small moss, caused by the falling of the water from the hill above it. Great is the medicinal virtue of these waters, in relieving inwardly, colies, pains in the

the stomach, griping of the guts, bilious and nephretic, nervous and hysteric colics; the gravel, by carrying off quantities of sand, (but does not dissolve the slimy gravel), and clearing the urinary passage in a surprising manner; in curing ichuries, and ulcerated kidneys; the gout, the passy; and is a sovereign remedy in rheumatic and scorbutic pains, even when the limbs are much swelled, useless, and covered with scales. It is applied outwardly in at. Anthony's fire, tumours, &c.

Mahon's Well, near St. Mahon's church, has the fame virtue, but does not operate so strongly; and there is a well of the same nature discovered not many years ago at Hallyards, within six miles of Edinburgh.

Montrofe Spa is of a whitish colour, soft taste, and discovers but little of the mineral. It is very diurctic, and, if drank in a sufficient quantity, purgative. It relieves pains in the stomach, weaknesses of all kinds, the strangury, gravel, stone; scurvies even in the worst condition, and spitting of blood.

Peterhead Spring, in the shire of Aberdeen, is celebrated as a vitriolic water in the last century, by Dr. Moore, professor of medicine in that ancient university. The waters are pretty much of the same nature with those of

The fpring of Aberbrothock in the county of Angus; which are apparently impregnated with steel. This water has a brisk spirituous taste at the well; yet tolerably bears carriage to some distance. It relieves in gravelly and scorbutic cases; removes acidity in the stomach: but its greatest virtue is in nervous cases, and broken constitutions.

The Dunse Spa in the Merse, appears, upon a strict examination, to be a very pure chalybeate spring; but, notwithstanding the simplicity of its contents, of very powerful virtue when drank on the spot. The scum, that settles on the surface, has been applied with suc-

cels

cess to weak eyes. The water taken under proper directions, to the amount of two quarts in 24 hours, removes flatulencies in the stomach; cures indigestion; frees children from the worms; strengthens the bowels; and is of fingular service in the scurvy, and also in scrophulous cases. In nervous and even in spasmodic cases there are instances of its efficacy; and of its curing palfies even in old people; the credit, therefore, of this fpring may be confidered as thoroughly established. See Dr. Hume's Esfay on the Virtues of these waters, Edinburgh, 1751, 8vo.

Glendy Spa rifes at a small distance from the famous Kairn on the top of the Grampian Hills, in a bog, with moss round about, and no rock near it. It mounts up in bubbles, as if boiling, through the moss, which is loaded with ochre. These waters may be drank with little or no preparation, and are ferviceable in removing gravelly complaints, in most scurvies, and cutaneous distempers; and particularly beneficial in nervous cases, and in a general bad habit

of body.

Kineardine Spa is a pure chalybeate, and has very near the same properties with the spa of Aberbrothock.

At Kinghorne, a very clear and cold water flows from the clefts of a rock, which quickly passes through the body. It is of excellent use for recovering a lost appetite, and against the gravel and stone; it is outwardly applied to watery and itching eyes, and against redness and pimples in the face. The famous Dr. P. Anderson wrote upon its usefulness. There flows also from the same rock a whitish viscid liquor, which is an excellent cosmetic.

Arthrey Well, two miles north of Stirling, flows from a mountain; where is a copper mine, with some mixture of gold and filver: the water is very cold, and, being tinctured with the minerals it flows

through, is of use against outward distempers.

In Glenelg, at a place called Achignigle, is a stream which turns holly into a greenish stone, of which they make moulds for easting musquet bullets, meltingpots for melting brass, and other metals.

There is a petrifying fountain, near the castle of Slaine, in the shire of Buchan, the water of which, dropping from a natural cave, presently turns into pyramids of stones, which are brittle, and make good lime.

There is another in *Hamilton* wood, the stones made by which resemble petrified moss.

At a very small distance west from Aberdeen springs Aberdeen Spa; the virtues of which, in many chronic distempers, have been celebrated by Dr. William Barclay, professor of physic in that university.

At a small distance from Cortachie, the Earl of Airley's seat, on the river of South-Esk, arises a steel water, at the foot of a hill, amongst rocky stones, that sparkle like marcasites when they are broken. These waters resemble in a gre t measure, and have much the same virtue as, those of Aberbrothock, and are both drank with the greatest success immediately after the ceasing of the spring rains; that is, in the months of May and June, or, before those of the autumn, in the months of August and September.

In the year 1748 a very valuable mineral spring was discovered, on the Hartfell mountains, three miles distant from Mosfat; known to cure hot tetterous eruptions, obstinate ulcers, bloody-flux, bloody urine, spitting of blood, rheumatic pains, and weaknesses of every kind, more especially those arising from long illnesses. But, what must appear very singular, and the belief of which nothing but the evidence of sacts could support, these waters have done most surprising cures in consumptions of the lungs in a very short time; and, what renders the Hartfell Spa still more valuable, its waters bear carriage as well, if not bet-

ter, than any of like virtue; and may be drank, with very near the same advantage, at any distance, as upon the spot. See Medical Essays and Observations, vol. ii. p. 15.

St. Katharine's Well in Lothian, at a small distance from Edinburgh, has been long remarkable for an oil of a black colour, and pleasant smell, floating on the top of the waters; which has been used medicinally, with great success, for old achs, and wandering pains.

At MonEton, near Edinburgh, is a well, called, The routing Well; because of the noise it makes before tempests, from the part of the well which looks towards that quarter of the sky, from whence the tempest is to blow.

In 1761, a well was discovered at Edinburgh, the water of which is much like that of Moffat in taste, and has been blessed with the same success in the cure of ulcers, obstructions in the bowels, &c.

Of Precious Stones, and other valuable Com-

Iron, at Dunfermling in Fife.

Free stone, slate, lime-stone, marble, in great plenty, all over the country.

Of the Customs, Manners, Language, &c. of the Scots.

THE Scots are divided into Highlanders, who call themselves the ancient Scots; and into Lowlanders, who are a mixture of ancient Scots, Piets, Britons, French, English, Danes, Germans, Hungarians, and others.

Buchanan describes the customs of the Highlanders graphically thus: "In their diet, apparel, and houfhold-furniture, they follow the parlimony of the ancients; they provide their diet by fishing and hunting, and boil their flesh in the paunch or skin of a beaft. While they hunt, they eat it raw, after having fqueezed out the blood. Their drink is the broth of boiled meat, or whey: they keep it some years, and drink it plentifully in their entertainments; but most of their drink water. Their bread is of oats and barley, the only grain produced in their country, which they prepare very artfully: they eat a little of it in the morning, and contenting themselves with that, hunt, or go about their business, without eating any more till night. They delight most in cloaths of several colours, especially striped; the colours they affect most,

most, are purple and blue. Their ancestors, as do most of them still, made use of plaids very much variegated; but now they make them rather of dark colours, refembling that of the crops of heath, that they may not be discovered, while they lie in the heaths waiting for their game. Being rather wrapped up than covered with those plaids, they endure all the rigours of the feafons, and fometimes fleep covered all over with fnow."

Here let me observe, that in my tour through these parts, when I have been forced by the weather to retreat for shelter into their huts. I have seen their children, several sometimes in a hut, full of the smallpox, and, at their height, they have been walking and lying in the wet and dirt, the rain at the same time beating violently through the thatch: yet they feemed hearty, drinking whey and butter-milk, and generally do very well*.

Buchannan proceeds:

"At home they lie upon the ground, having under them fern or heath (covered with a sheet or blanket); the latter laid with the roots undermost, so as it is almost equal to feathers for softness, but much more healthful; for the quality of heath being to draw out fuperfluous humours, when they lie down weary and faint upon it at night, they rife fresh and vigorous in the morning. They affect this hard way of fleeping; and if at any time they come into other places of the country, where there is better accommodation, they pull the coverings off the bed, and lie down upon them, wrapped in their plaids, lest they should be spoiled by this barbarous effeminacy, as they call it."

^{*} They practifed inoculation long before Lady Mary Wortley Montague introduced it into England, by laying the pock on the skin, which produces the same effect as if an incision was made. Their regimen under the diftemper above mentioned is at length justified by modern practice.

the act of the British Parliament, which passive, the tave been gradually diminishing, and it is not bubted but, in a few years, their ancient dress totally laid aside, which is the more to be as every thing which creates a distinction is

to every kingdom.

^{*} They practifed inoculation long before Lady Mary Wortley Monta, gue introduced it into England, by laying the pock on the skin, which produces the same effect as if an incision was made. Their regimes under the distemper above mentioned is at length justified by modern practice.

Since the act of the British Parliament, which paffed in 1746, for obliging them to alter their dress, the plaids have been gradually diminishing, and it is not to be doubted but, in a few years, their ancient dress will be totally laid aside, which is the more to be wished, as every thing which creates a distinction is hurtful to every kingdom.

Our Camden speaks of the Highlanders as follows:

"These parts are inhabited by a people uncivilized, warlike, and very mischievous, commonly called Highland-men; who, being the true race of the ancient Scots, speak Irish, and call themselves Albin-nich (in Braidalbin); a people that are of firm and compact bodies, of great strength, swift of foot, high-minded, inured to exercises of war, or rather robbery, and desperately bent upon revenge. They wear, after the manner of the Irifh, striped mantles (plaids) of various colours, with their hair thick and long; living by hunting, fishing, and stealing. In war, their armour was formerly a head-piece, and a coat of mail; and their arms a bow, barbed arrows, and a broad back-fword;" [but late a broad-fword, a durk and pistol at their girdle, and a target at their shoulder:], and being divided into families, which they call. clans, what with plundering and murdering, they commit fuch barbarous outrages, that their favage cruelty hath made the law necessary, which enacts, hat if one of any clan bath committed a trespass. he rest shall repair the damage; or whoever of them s taken shall suffer death."

The manners and cultoms of the modern High-

anders will be seen hereaster.

The Lowlanders partake much of the temper of the cople, of whom we have mentioned them to be omposed, but most resemble the French, occasioned. y the long league between the two nations, the mual commerce, frequent inter-marriages, and custom VOL. IV.

26 GENERAL DESCRIPTION

of travelling into France to study the law, and other sciences, and by their affecting to serve in the French armies. But, since the union of the crowns, the English customs, and way of living, have obtained much in the Lowlands, where the English tongue has been their natural language for above 600 years; but still retains more ancient Saxon and French. This being extraordinary, and perhaps singular, that a foreign language should prevail in a country altogether independent of England, and where the inhabitants are of another lineage, and maintained such sierce and long wars to preserve their distinct sovereignty; the Scottish antiquaries and historians give the following reasons for it.

1. The frequent Saxon auxillaries fent to affiff the Piets against the Scots, which occasioned many of those Saxons to settle in the Lowlands of Scotland, then pos-

01

110

wh

ver

Bei

me

four

affai

ders

fessed by the Piets.

2. The last considerable effort made by the Piets, in conjunction with the English, to recover their country against Donald V. of Scotland; who, after he. had defeated the English and Piets upon the river fedd, in Tiviotdale, neglecting to improve his victory, was afterwards surprised by them near Berwick, and taken prisoner, after a great slaughter of his men. Upon this success, the English, under the conduct of Ofbresh and Ella, poffeffed themselves of the country, as far as Dumbarton, without restoring the Piets; the major part of which retired to Denmark and Norway, and the remainder were cut off by the English, to prevent their calling in foreigners. Thus the English continued in possession of that part of the country, from the year 858, till about the year 875, when king Gregory the Great of Scotland recovered the country, and the Scottish proprietors the possession of their estates; but willingly entertained the English commonalty and husbandmen, who were as defirous to

flay, their own country being, at that time, infested by the Danes; and they rather chose to be under the dominion of the Scots, who were Christians, than under that of the Danes, who were Pagans.

3. Great numbers of the English came into Scotland to affift king Malcolm III. against the usurper Macheth, whom he rewarded, after his victory, with possessions

in Scotland.

b com-

rous to

flay,

4. A great many English came to Scotland, after the Norman conquest, with Edgar Atheling, and his fister Margaret, who was afterwards married to king Malcolm above mentioned; which makes the reasons of the Scots historians for the prevailing of the English language in the Lowlands of Scotland, very probable.

It has been gaining ground upon the old Scots language ever fince, which is now confined to the Highlands, and the ifles, where most of those of note also understand English: though about 100 years ago, the old people in Galloway generally understood the Erse, or ancient Scots language, which is now, in a manner, quite worn out, except in the Highlands.

Of the Religion und Ecclefiastical Government of Scotland.

THE established religion of Scotland, since the Revolution, and confirmed by the Act of Union, is what is called the Presbyterian; being a church government by pastors, teachers, elders, and deacons. Before the Revolution, the church was governed by bishops; but they, not at all relishing the new settlement, were abolished.

The ecclefiastical courts, as they now stand, are

four, viz.

1. The kirk-fession, consisting of the minister, elders, and deacons, in each parish, who consider the affairs of the parish as a religious society. They indeed the consistence of the parish as a religious society.

58 GENERAL DESCRIPTION

judge in all matters of leffer feandals, can suspend from the communion, and regulate all particulars re-

lating to public worship and the poor.

2. The prefbytery, which confifts of the minister, and one elder, from 5 to 10, 12, or more neighbouring parishes, who chuse one of these ministers to be præses, or moderator. Here are tried appeals from the kirk-sessions: and here they inspect into the behaviour of the ministers and elders within their respective bounds. They supply vacant parishes, ordain pastors, examine and license schoolmasters, and young students for probationary preachers; and judge when, or on whom, to inslict the greater excommunication.

3. The provincial fynod: this is composed of all the members of several adjacent presbyteries. It meets twice a year, at some principal place within its bounds, and is opened by a sermon. Their business is, to receive correspondents from the neighbouring synods, who are a check upon one another; to determine appeals from the presbyteries in their district; to enquire into and censure the behaviour of the presbyteries themselves. They likewise have power to transport or remove a minister from one place to another, which often occasions great disturbance. Hence lie appeals, however, to

4. The general affembly, the highest ecclesiastical court in the kingdom, which meets yearly in the month of May, and sits about 10 days. A lord commissioner, who is always a nobleman of the first quality, presides here, as a representative of the King's person. All the members of this are annually elected; and the moderator of the last year's assembly

opens the new fessions with a fermon.

The same discipline, as to the main of the several forms and proceedings, was observed in the episcopal times, only they had no lay-elders: the bishop or his deputy, being a minister or ministers, within the bounds.

viz

For

bounds, prefided in all presbyteries and diocesan fynods, as the archbishop of St. Andrew's did in the national or general affemblies. For it must be observed, that episcopacy in Scotland differed from episcopacy in England; for here it was as low as the nature of an episcopal church could admit: the bishops were fine quibus non, they had no lay-chancellors, but did all things presbyterorum consilio.

During the time of the episcopacy, Scotland contained two archbishoprics, St. Andrew's, and Glasgow; and twelve bishoprics, which were Edinburgh, Dunkeld, Aberdeen, Murray, Birchin, Dumblain, Ross, Caithness, Orkney, Galloway, Argyle, and the Isles.

The 13 provincial fynods, into which Scotland is at

present divided, are,

1. Lathian and Tweedale, confishing of seven prefbyteries; viz. Edinburgh, Linlithgow, Biggar, Peebles, Dalkeith, Haddington, and Dumbar.

2. Merfe and Tiviotdale, confifting of fix presbyterics ; viz. Dunfe, Chirfide, Kelfe, Jedburgh, Selkirk, Er/ilton.

. 3. Dumfries, confifts of four presbyteries; viz. Middlebee, Lochmaban, Pentpont, and Dumfries.

4. Galloway confifts of three presbyteries; viz.

Wigton, Stranrawer, and Kircudbright.

5. Glasgow and Air consist of seven presbyteries; viz. Air, Irvin, Paifley, Hamilton, Lanerk, Glafgou, Dumbarton.

6 Argyle and Air confift of five presbyteries; viz. Denoon, Cambleton, Inverary, Kilmoir, Sky.

7. Perth and Stirling contain five presbyteries; viz. Dunkeld, Perth, Dumblane, Stirling, Auchterarder.

8. Fife contains four presbyteries; viz. Dunform-

ling, Kirkaldy, St. Andrew's, Cowpar.

9. Angus and Mernes contain fix presbyteries; viz. Meigle, Dundee, Forfar, Brechin, Aberbrothock, fordun.

30 GENERAL DESCRIPTION

10. Aberdeen consists of eight presbyteries; viz. Kincardin, Aberdeen, Alford, Garioch, Deer, Turreff, Fordice, Ellon.

11. Murray confifts of fix presbyteries; viz Strathbogie, Elgin, Forres, Inverness, Abernethy, Aberlower.

12. Ross consists of four presbyteries; viz. Chanony, Tain, Dingwal, Dornech.

13. Orkney, consists of three presbyteries; viz. Caithness, Orkney, Zetland.

The law of Scotland has provided against pluralities; and throughout the whole country there are no benefices worth less than 50 l. per ann. sterling; which, in that country, is a good maintainance; nor any that exceed 150 l. per ann.

In the 17th year of his late Majesty's reign, an act was made, whereby ministers in Scotland taxed themfelves, in order to raise, by annual rates, out of their stipends, a fund for support of the widows and children of the established clergy of Scotland; by which the relict of each minister is to be allowed an annuity, and his child or children a certain sum, in proportion to the rate he annually paid.

Of the Order of the Thistle, or St. Andrew, in Scotland.

THE order of St Andrew, or the Thistle, by reason of its great antiquity, and memorable institution, is, upon all occasions, called The most Ancient and most Noble Order of the Thistle, being founded, as all the Scotch historians affert, by Achaius the 65th king of Scotland, after a signal victory obtained over the Saxons, anno 819, and dedicated to St. Andrew, the patron or tutelar saint of Scotland.

This order came at length to shine forth in fuller splendor in the reign of king James V. who was him-

felf

to

th

tic

m

to

pro

der

tut

felf a splendid and magnificent prince. He caused the collar of the order to be composed of two ancient badges or fymbols of the Scots and Piets; viz. the thiftle and fprigs of rue; but about the time of the Reformation it fell into defuctude, and was then rarely used by the knights; being so very zealous for the reformed religion, that they left their order, where they laid down their popery; and it was never after re-assumed, till the reign of king James VII. who, for the better regulating of the order in all its proceedings, figned a body of the statutes, and appointed the knights brethren to wear the image of St. Andrew upon a blue watered tabby ribband; and likewise named the royal chapel, or abbey church of Holy Rood House to be the chapel of the order (the old church of St. Andrew being ruined at the Reformation); for which end it was put in excellent repair,

but was divested of all its beautiful ornaments by a

furious rabble at the late Revolution.

Her late majesty queen Anne was pleased to revive the faid order upon the 31st of December, 1703, and figned a body of flatutes, wherein the colour of the ribband was changed from blue to green, to make a distinction between this order and that of the Garter: all which statutes the late king George I. was pleafed to confirm, with some additional ones, among which was that of adding rays of glory to furround the whole figure of St. Andrew, which hangs at the collar. And though, from the time of the Reformation, both elections and instalments had been dispensed with, his majesty was pleased to order, that for the future chapters for election shall be held in the royal presence; to which end he commanded the great wardrobe to provide the knight's brethren, and officers of the order, with fuch mantles, as are appointed by the sta-

tutes of the order.

Andrew,

Of the Civil Government of Scotland.

THE College of Justice, commonly called, The Court of Seffion, confifts of a prefident and fourteen fixed fenators, or judges, called Ordinary Lords of Seffion, and two extraordinary lords; and they have feven clerks of fession, and fix other inferior officers. Before this court all civil canfes are tried at flated times, which they determine by acts of Parliament, and the custom of the nation; and, where these are defective, they decide according to the imperial and civil law, not according to the rigour of the letter, but according to equity and justice. There lies no appeal from this court, but to the Parliament; and the presence of nine judges is required to make their decrees valid. The Parliament has full power to affirm or reverse, with costs not exceeding 200 l. sterling.

This court has distributive justice only, both in law and equity; but no authority as to life or limb, unless for some faults competent to themselves. Since the Union, lords of session are appointed a committee for planting of churches, and valuation of tythes.

The High Court of Justiciary confifts of five lords of the sossion, and the justice-general and justice-clerk. They try all crimes. All prosecutions in this court are raised by the king's advocate; and the greatest traitor is, here, allowed advocates to plead for him.

The Court of Exchequer was established in purfuance of the Act of Union, in the sixth year of queen Anne; and has the same power, authority, privilege, and jurisdiction over the revenue of Scotland, as the Court of Exchequer in England has over the revenues there. The judges have also the power of passing signatures, gifts, and tutories, &c. The court con-

fifts

k

ir

ki

tiv

sh al

CLI

the

fifts of a chief, and four other barons; and it has two remembrancers, a clerk of the pipe, attornies, auditors, and other officers.

The officers of state are,

1. The keeper of the feal, and his officers,

2. The lord privy feal, and his officers.

3. Lord clerk register, and his officers.

4. Lord advocate.

The Faculty of Advocates enjoy many and great privileges with the rest of the college of justice; and have a dean, treasurer, clerk, curator, and other of-

Writers of the fignet are those, who subscribe all writs and fummonies that pais the fignet; and they, as well as the advocates, are capable of being made

ordinary lords.

t confifts

Besides the above national judges, every particular county or thire has a cnief magistrate, or his depute, ordinary judge in all cases civil and criminal; but an appeal lies from this magistrate, in most cases, to the

Session and Court of Justiciary. The sheriff is, in effect, the supreme justice of peace, to whom the law principally intrusts the securing the quiet and tranquillity of the part of the kingdom of which he is sheriff. King James VI. and king Charles I. bought in some, and designed to buy in all the rest, of these heretable sherisfalties; but

most of them yet remain in the great families of the kingdom.

Bailiffs, stewards, and constables, in their respective districts, have the same liberty as sheriffs in their shires. When the jurisdiction act passed, in 1748, all the heretable theriffalties were purchased by the crown, which has now the full right of appointing theriffs, and theriffs-depute. The judges also now go their circuits to try criminals, as is practifed in

South Britain.

There are three forts of burghs; viz. Burghs Royal, Burghs of Regality, and Burghs of Barony; every one whereof is a corporation, and holds courts, though only the royal burghs fend members to Parliament.

The Royal Burghs are one entire body, governed by, and accountable to, one general court, called the Convention of Burrows, which is annually held, generally at *Edinburgh*, and has cognizance of all matters relating to the trade and interest of all the burghs

in general.

Regalities were feus granted by the king to some particular subjects, whose authority and jurisdiction were very large and extensive, both in civil and criminal cases; and the lord or his baillie, had not only the power of furca & fessa, pit and gallows; but a jurisdiction with the magistrate in civilibus. But these regalities have been all abolished, by consent of the proprietors of them, by virtue of an act made 20 Geo. II. for that very purpose.

As to Burghs of Barony, every one that holds a barony of the crown, has a court wherein leffer causes,

both civil and criminal, are tried, &c.

The Commissariot Courts are a kind of ecclesiastical courts. The commissaries of Edinburgh, who are four, particularly try causes of matrimony and adultery, in order to a plenary divorce, not only a tore of mensa, but even a vinculo matrimonii; so that the innocent party may marry, as if the offending party

were naturally dead.

The Court of Admiralty is a supreme court, in all the causes competent to his own jurisdiction; and the lord high admiral is the king's lieutenant and justice-general upon the seas, and in all ports, harbours, and creeks of the same, and upon fresh water and navigable rivers below the first bridge, or within slood-mark. And no appeal lies to the court of session for maritime

h

ony; ourts, Parerned d the , gemat-

irghs

urghs fome Ction d criot onbut a thefe of the Geo.

a baauses, affical

o are aduloro & he inparty in all

nd the uffices, and naviflood-

on for ritime

maritime matters. All maritime causes, crimes, faults, trespasses, quarrels, &c. are triable before the lord admiral's judge (for he himself never judges in person) by the civil law, and customs of Scotland. Nevertheless, there are some particular jurisdictions of admiralty hereditary in some great families; as the duke of Argyle, who is admiral of the Western Isles; the earl of Sutherland, of the shire of that name; the earl of Morton, of Orkney, and Zetland, &c. fuch men of war as come up the Frith of Forth, for guarding and fecuring the coafts, receive orders from the lord provost of Edinburgh +.

By the 6th of Queen Anne, justices of peace are established in Scotland, with the same authority as those

in England.

A short View of the Asts of Parliament of Great Britain, that have made any Alteration in the Laws of Scotland, from the Union of the two Kingdoms, Anno 1707.

[] NION of the two kingdoms.] By 5 A. R. cap. 8. it was enacted, that the kingdoms of England and Scotland should be united into one kingdom, by the name of Great Britain, to commence on the first of May, 1707.

Parliament.] That the faid united kingdom should

be represented by one Parliament.

Succession of the crown.] That the succession of the crown be fettled in the Protestant branches of the house of Hanover, as it stands limited in England.

Land-tax.] That when 1,997,763/. 8s. 6d. 1 shall be raised in England by a land tax, the quota for Scot-

† There jurisdictions have been abolished by the act above mentioned, and veffed in the crown.

[.] The Orkney islands were fold by the late earl of Morton, to Sir Laurence Dundas, Bart. with the confent of his heir.

36 GENERAL DESCRIPTION

land should be 48,000 l. as the quota of that kingdom; Scotland not to be charged with any duties laid on by the Parliament of England before the Union.

Coin, weights, and measures.] To be the same as in

England.

Trade, customs, and excise.] The subjects of the united kingdom shall have free trade to all places belonging to either. To be regulated, as in England, throughout the united kingdom.

29 Geo. II. c. 12. A method is prescribed for grant-

ing licences to retail ale, &c.

Civil government.] The courts of session, or college of justice, the courts of justiciary, and the inferior courts of Scotland, to remain as they are; and no cause in Scotland to be cognizable in the courts of West-minster.

20 Geo. II. cap. 43. Regulations of the fheriff's

court.

Offenders of dittay.] 8 A. cap. 15. The method of taking up offenders by dittay, and exhibiting informations by the stress of the portous roll, abolished.

8 A. cap. 15. Informations in order to make up dittays concerning crimes to be tried in the circuits in Scotland, to be by prefentments made by the justices at their quarter-sessions, or upon information taken by them for stewards, bailiss of regalities, &c.

20 Geo. II. cap. 43., Advocation of causes under

12/. value, discharged.

Superiors, vaffals, difarming Highlanders.

r Geo. I. cop. 20. An act for encouraging all superiors, vasfals, landlords, and tenants, who continue loyal to king George.

By 25 Geo. II. cap. 41. the crown is enabled to pur-

chase superiorities in Scotland.

Vaffals attendance. I Geo. I. cap. 54. enjoins, that the personal service and attendance, which was wont

Highlanders disarmed.] I Geo. I. cap. 54. An act for more effectual securing the peace of the Highlands in Scotland; which enacts, that no person within the said Highlands, shall use or bear broad-swords or target, poynard, wingar, or dirk, side-pistol, or gun, or any warlike weapons, in the fields, or in the way to or from any church, market, sair, burial, huntings, meetings, &c. However, not to extend to noblemen, officers of justice, or commoners, having yearly 4001. Scots, or who are otherwise qualified to vote at elections for Parliament-men; allowing to every such commoner two firelocks, two pair of pistols, and two swords; and that the magistrates of the royal burghs may keep arms in magazines.

Two other, 19 Geo. II. cap. 39. and 21 Geo. II.

cap. 34, for disarming the Highlands.

26 Geo. II. cap. 22. Stirlingfrire included."

19, 20, and 21 Geo. II. No persons, but soldiers in the army, are to wear Highland cloaths, that is to say, the plaid, philbeg, or little kilt, trouse, shoulder-belts or any part of the Highland garb.

Equivalent.

3 Geo. I. cap. 27. Commissioners are appointed to state the debts due to Scotland, by way of equivalents' Also,

5 Geo!

5 Geo. I. cap 20. An act for fettling certain yearly funds, payable out of the revenues in Scotland, and other uses mentioned in the treaty of Union; and to discharge the equivalents claimed on behalf of Scotland; and for obviating suture disputes concerning it. N. B. This equivalent was stated by the Union act, at 398,0851. 105.

The faid fund to be payable out of the excise and customs of Scotland; the charges of the civil lift there

being first paid.

If the produce of the excise, &c. shall be deficient,

to be made good out of the revenues of Scotland.

Proprietors of debts incorporated.] The King impowered to incorporate the proprietors of 248,550 l. 9s. od. ½, on whom the above faid annuities are fettled: the faid fum to be the joint stock of the company, and every one to have a share in the annuity in proportion to his debt.

Elections of Peers and Commoners.

Sixteen Peers of Scotland to be chosen out of the Scots peerage, to sit and vote in the House of Lords; and forty-five representatives of Scotland, in the House of Commons of the Parliament of Great Britain; thirty for the shires, &c. and sifteen for the royal burghs.

12 A. cap. 6. No person who has purchased an estate, intitled to elect, or be elected, a member of

Parliament, till after a year's possession.

Anno 1734. An act for better regulating the election of members to serve in the House of Commons for Scotland; and for incapacitating the judges of the court of Justiciary, and barons of the Exchequer there, to be elected, or to sit and vote as members of the House of Commons.

6 A. cap. 23. An act requiring the election of fixteen Peers. By the same act, Peers of Scotland are to be tried as English Peers are, for treason or felony.

Exchequer.] 6 A. cap. 26. An act for erecting a court of Exchequer in Scotland, after the model of that in England. Jurors to have 51. per annum, four terms annually for the court of Exchequer. Writs of error there to be returnable in the Parliament of Great Britain.

Malt act.] 11 Geo. I. cap. 8. The duties on malt in Scotland, fettled 3d. the bushel; being half the

duty paid in England.

Church government, Toleration, &c.

The presbyterian church-government to remain established in Scotland. The church of England to re-

main established in England.

10 A. cop. 7. It shall be lawful for those of the episcopal communication in Scotland to affemble for divine worship to be performed by pastors ordained by Protestant bishops, without disturbance, except in parish-churches.

Such

Such paffors to exhibit their orders at the quarterfessions of the peace, and the same to be registered, paying one shilling.

Such parsons may baptize and marry, provided the christenings be registered, and banns three times pub-

lished in the episcopal congregations,

One hundred pounds penalty for disturbing such

congregations.

19 Geo. II. No pastor or minister of such communion shall officiate, unless they first take the oaths, and pray for the king and royal family by name.

Excommunication.] No pain or forfeiture to be incurred by any person on any excommunication by the church-judicatories in Scotland. Ministers to pray for the royal family.

Patrons. 10 A. cap. 12. Patrons of churches, &c.

restored to their right of presentation.

Papists and Nonjurors, to register.] 9 Geo. 1. cap. 24. An act to oblige Papifts and Nonjurors to register their estates in Scotland.

10 Geo I. cap. 10. An act to explain the faid act, to oblige Papists to register their estates.

Civil Government.

Sheriffs.] 21 Geo. II. cap. 19. Sheriffs-depute, &c. not to be officers to any subject.

28 Geo. II. cap. 7. For 15 years, to hold their offices fo long as his Majesty shall appoint, afterwards

ad vitam aut culpam.

Justices of peace.] A sufficient number to be in Scotland, who, befides the powers fuch justices now have there, shall have the same authority as justices of peace in England.

Circuit Courts In Scotland to be held but twice a year. Another, 8 A cop. 15. None obliged to attend Lords of Justiciary in their circuits, but the sheriff,

and his officers.

1 Geo. I. cap. 28. An act to take away the yule va-

cance, or Christmas vacation.

3 Geo. II. cap. 32. The judges of the court of Seffion are impowered to adjourn their fessions; so that they may still have a yule vacance, or Christmas vacation, if they see sit.

Lords of Session.] 10 Geo. I. cap. 19. An act to ex-

lords of festion in Scotland.

Oaths.] 6 A. cop. 14. An act requiring the abjuration-oath to be taken by all officers in Scotland.

Another, 8 A. cap. 14. requiring the oaths to be

taken by all officers in Scotland.

Another, 5 Geo. I. cap. 29. To make the former more effectual, and to cause the oaths to be taken by ministers and preachers in Scotland.

20 Geo. II. An act was made to give relief to perfons in Scotland, whose title-deeds and writings were destroyed, or carried off, by the rebels in the late rebellion 1745.

20 Geo. 11. cap. 43. Directions for officers poynding

goods.

By 20 Geo. II. cap. 51. Heirs of tailzie, &c. are impowered to fell to the crown.

Prisons.] 20 Geo. H. cap. 43. Regulations of pri-

fons in Scotland.

By 21 Geo. II. cop. 19. His majesty's forts are made lawful prisons.

By another act, 20 Geo. II. all heretable jurifdications of justiciary regalities, heretable bailleries, and constabularies, stewartries, sheriffships, and deputysherifships, in the possession of subjects, are taken

away

away from the faid fubjects, and restored to the crown; and provision is made for the more effectual adminis-

tration of justice in Scotland.

Another act was made, 20 Geo II. whereby the tenure of wardholding in Scotland is taken away, and converted into blanch and feu-holdings, the calualties of fingle and life-rent. Escheats incurred by horning and denunciation, in civil causes, are also taken away, and vaffals are discharged of their attendance at headcourts; and the services of tenants are ascertained, and heirs of tailzie are allowed to fell lands to the crown.

By another act, 21 Geo. II. cap. 19. the method of taking evidence in writing, in cases not capital, is ta-

ken away.

By 21 Geo. II. cap. 33. the evidence of offenders is admitted in trials for theft of cattle.

Treason, and other Crimes.

7 A. cap. 21. High-treason, and misprision of treason, to be deemed the fame in Scotland as in England; and the crown impowered to grant commissions of oyer and terminer to try the same in Scotland.

Jurors.] Jurors at such trials to have estates at forty

fhillings per annum each.

Treason, indictments, and presentments.] After the decease of the Pretender, and three years after the Hanover succession shall take place, no attainder for treason shall disinherit the heir.—And then a copy of the indictment for treason, and a list of the witnesses to prove it, and the names of the jury with these additions, shall be delivered to the party indicted ten days before the trial.

But, by an act 17 Geo. II. the first mentioned provision is not to take place, till the deaths of the fons of

the Pretender.

19 Geo. II. cap. 25. Suspected persons in Scotland may be summoned to appear at Edinburgh.

LETTER II.

Containing a DESCRIPTION of the MERSE, the Two LOTHIANS, of EDINBURGH, LEITH, &c.

I AM just now entered Scotland by the ordinary way of Berwick, which place I have already sufficiently described in a former letter. The first thing we observed, after we had lest Berwick about three miles behind us, was the sea on the right-hand, and the river Tweed, which setches a reach northward, on the lest. The land between lies so high, that in stormy weather it is very bleak and unpleasant, having little or no shelter: however, the land, compared to what we lest in Northumberland, or what we soon found farther in Scotland, is good.

The first town in Scotland, but not directly in the road, is Mordington, a poor forry village; yet gives the title of lord to a branch of the noble family of Douglas.

About three miles farther east is a small harbour, with a town called Aymouth, where a fort was formerly raised to curb the garrison of Berwick. This town gave title of baron to the late duke of Marlbrough; but the patent being granted only to him, and the heirs male of his own body, the honour extinguished with

with him. It affords a good harbour for fishing-veffels. In Queen Elizabeth's time, the French held it, and fortified it, as it was the first port in Scotland they could fasely land their supplies at, for the queen-mother; but they were obliged to quit that, and the kingdom, some time after, by a treaty, queen Elizabeth supporting the resormers against her.

Claret I found here in great plenty, and very cheap, and the best of fish in abundance; but the cookery

was as nafty as the women.

From this place we enter upon a most desolate, and, in winter, frightful moor for travellers, especially strangers, called *Coldingham-meor*, upon which, for about eight miles, you hardly see an hedge, or a tree; and I met with but one house all the way, and that not an house of entertainment.

Coldingham, whence this moor derives its name, was an old monastery, built by Edgar, king of Scotland, about the year 1100, and famous for its lady abbess Ebba, of whom they tell us the following story.

This lady was the daughter of Edelfred, king of Northumberland; and, when her father was taken prifoner by the pagan Mercians, the got into a boat in the Humber, with three other women, who, by their own prayers only, were miraculously preserved, and carried as far as Scotland, where, under a promontory, they were driven on shore by a storm, and their boat dashed in pieces.

When they got ashore, they laboured with their hands, and made themselves a little but to lodge in; they continued their religious way of living, and the country-people sustained them with sood; till at length, acquiring a great character by their sanctity and austerity, they were addressed to, far and near, for their prayers; and, by the charity of the people, got enough to build a religious house at Coldingham.

Here

Here, as fame fays, when the cruel Danes came on shore, the religious lady, (who, it seems, was very beautiful too) cut off her nose and upper-lip, and made all her nuns do the same, in order to preserve their chastity. Whereupon the barbarous Danes, enraged at their zeal, fired their nunnery, and burnt them all alive. From this lady, who, it is said, was sainted for these sufferings, the promontory, where she landed, is to this day called St. Ebbe's-bead, and vulgarly, by our sailors, St. Tabbe's. There was once, upon the point of this promontory, a strong fort, called Fast-costs, belonging to the earl of Hume; but it has been some time demolished.

A little to the north-west is the town and castle of Duns, remarkable for the birth of John Duns, commonly called Duns Sectus, anno 1274; fome of whole family where then in being there. Duns Scotus was a friar minor, and the greatest scholar of his age. Scaliger fays, there was nothing his genius was not capable of. But his chief study was in points more nice than necessary, whereupon he was called Dollor Subtilis. His followers, called Scotiffs, were great oppofers of the Thomists, another set of scholastics, so named from Thomas Aguinas. He studied at Oxford and Paris, and died of an apoplexy at Cologne. After Berwick was taken by the English, the sheriff-court was kept here, which was but lately removed to a market town, called Greenlow; which is also a royal burgh, and the principal in the shire, belonging to the earl of Marchmont, who has a handsome seat, called Marchmont House, in the neighbourhood; which may be feen from the new road, which paffes through this town, and croffes the Tweed at Coldstream Bridge.

Duns was also remarkable for the encampment of the Scottish army, under general Lessy, assembled to oppose king Charles I. when he came to the English borders with an army, to persuade that kingdom to obedience obedience. It has the best weekly market for cattle in Scotland, and is a place of the best trade in this county.

Coldstream is a market-town, in this county of Merse, where was anciently an abbey. In the year 1763, an act passed for repairing and widening the road from Deanburn-bridge, through Greenlow and part of the fedburgh road, by Lauder, in the shire of Berwick, to Cornbill in the county of Durham; and for building a bridge over the Tweed, near Coldstream.

In consequence of this act a fine bridge is now built over the Tweed, consisting of five large arches, for the passage of the river in common; with two smaller (one at each end) upon the shores, in order to take off the weight of water which would otherwise lay upon the abutments in the time of sloods. This is the most elegant bridge in the North; the piers are small, the arches wide, and it has a raised soot-way on each side, for the greater convenience and safety

At a small distance from the town of Coldstream is the feat of Sir John Pringle, Bart. called the Lees. He has lately rebuilt the house, in a very elegant manner. In the front is a handsome pediment, supported by four Corinthian pillars: the whole building is of fine stone, with wings for the offices. It is sheltered from the north winds by plantations, at a little distance; and to the fouth it commands a delightful view of the river, and the elegant new bridge above mentioned. At the west end of the lawn, (which is interspersed with small plantations of shrubs, &c.) is an open octagon temple, the dome supported by Ionic pillars, which commands a charming view of the Tweed, and country adjacent. Sir John has a great tafte for agriculture, and has, in consequence thereof, introduced feveral advantageous improvements into the neighbourhood, Eccles

Eccles also is a market-town: and Ersilton is noted for the birth-place of the rhyming poet Learmont, so much admired by the vulgar Scots, under the name of Thomas the Rhymer. Hume was sormerly the residence of the earls of that name, which they derived from the town; and they had a strong castle there, now demolished. The present seat of this family is at Hirfel, about two miles from Coldstream. The house is old; but it has lately been repaired, and received some additions. It is surrounded with plantations of firs, which come up to the road-side.

Many of the ancient Scattish gentry and nobility derived their names from the places of their residence, as was originally the custom in England, and other countries. Thus the Dunbars, Humes, &c. were originally the same; but tradition, or rather the armorial bearings of the several families, distinguished their lineage. This hint may serve, once for all, to those families called of that ilk; i. e. whose surname and paternal estate are the same, and are generally estated.

teemed ancient and honourable.

At the end of the moor, the Firth of Forth instantly caught our fight; and here we had an extensive prospect of that great arm of the sea, of the rich country of East-Lothian, the Bass-Isle, and at a distance the sea of May, the coast of the country of Fife, and the country as far as Montrose.

After going down a long descent, we dined at Old Combus, at a mean house in a poor village, where, I believe, the lord of the soil is often execrated by the weary traveller, for not enabling the tenant to furnish more comfortable accommodations, in so considerable

thoroughfare.

The country becomes now extremely fine, being bounded at a distance on one side by hills, and on the other by the sea. The intervening space is a rich tack of corn-land; indeed, East Lothian is consider-Vol. IV.

ed as the Northamptonshire of North Britain. land is in many places manured with fea tang; but I was informed, that the barley produced from it is

much lighter than that from other manures.

The next town of note is Dunbar, a royal burgh, which, in Scotland, is much the fame with what we call a corporation in England, and fends members to Parliament in like manner; only, in Scotland, these burghs have some particular privileges separate to themselves; as that, for example, of holding a fort of Parliament, called a Convention of Burghs, a method taken from the union of the Hans towns in the North, in which they meet and concert measures for the public good of the towns, and of their trade, and make by-laws, or acts and declarations, which bind the whole body; nor have they lost this privilege by the Union with England, it being preferved entire, and is now many ways more advantageous to them than it was before, as their trade is now more confiderable.

This town of Dunbar is an handsome, well-built town, fituated in the mouth of the river Forth, on the fouth fide towards the German Ocean. The houses, as in most of the principal towns, are all built with stone, and covered with flate. It hath been fenced in with a strong stone wall; but that is now decayed. On the opposite side of the haven appear the ruins of a castle, almost covered with the sea at flood-tide, which formerly was remarkably strong, and was the feat of the earls of March, afterwards stiled earls of Dunbar; a fortress often won by the English, and as often recovered by the Scots; but demolished in the year 1656, by order of the commonwealth, to pre-

vent its being a retreat for the royalists.

Dunbar is a very confiderable port, and of great advantage to all ships in the river, in case of stress of weather; but yet its entrance was so difficult by steep rocks, in the mouth of the harbour, that the corpora-

tion had exhausted itself by endeavouring to cut through them; and, being unable to proceed farther in it, and, at the same time, the town-house and school of the town being run to decay, and the town itself destitute of fresh water; to answer all these good purposes, they procured an act to pass, in the year 1718, intitled, An Act for laying a Duty of Two Pennies Scots, or One-sixth Part of a Penny, upon every Pint of Ale or Beer that shall be fold within the Town of Dunbar, for improving and preserving the Harbour, and repairing the Town-house, and building a School, and other public Buildings there; and for supplying the said Town with fresh Water.

This duty has been of great fervice to the town, and has enabled them to make a great progress in the intended improvements: but the principal works, which were to dig up part of the rock at the bottom of the harbour, to carry out the great pier to the rock called the Beacon Rock, to cut the slope of the island down to a perpendicular, and to supply the town with sresh water, remaining undone; and the act expiring in the year 1738, the same was continued for 25 years

longer, by an act paffed 10 Geo. II.

poration Between the harbour and the castle is a very surprising stratum of stone, in some respects resembling that of the Giant's Causeway in Ireland. It consists of great columns of a red grit stone, either triangular, quadrangular, pentangular, or hexangular. Their diameters from one to two feet, their length at low water thirty, dipping or inclining a little to the south. They are jointed, but not so regularly or so plainly, as those which form the Giant's Causeway. The surface of several that had been torn off appear as a pavement of numbers of convex ends, probably answering to the concave bottoms of their joints once incumbent on them. The space between the columns was silled with thin septa of red and white sparry matter,

and veins of the same pervaded the columns transversely. This range of columns faces the north, with a point to the east, and extends in front about two hundred yards: the breadth is inconsiderable. The rest of the rock degenerates into shapeless masses of the same fort of stone irregularly divided by thin septa. The rock is called by the people of Dunbar, the Isle.

They had here a great herring fishery, which has decayed very much of late years; and they cure herrings here, as they do at Yarmouth in Norfolk, though I cannot fay they cure them fo well, nor are they fo fit for keeping and fending on long voyages. The herrings themselves may indeed make a little difference, being generally larger, and fatter than those of Yarmouth; which makes it more difficult to cure them fo as to keep in an hot climate, and on a long voyage. Some public-spirited persons have set up whale-fishing here, with success. This place, if the port was once improved as far as it is capable, fo as to receive more thips, and those of larger burthen, and that allowance to maintain those improvements which they now enjoy continued for a farther term, would, from the convenience of its fituation, and the industrious temper of the people in the country about it, become, in all probability, much more confiderable than we now find it. Here was formerly a strong castle, which was demolished by act of Parliament during the minority of king James VI.

Between the town and the great road stands a pleasant and agreeable seat of the duke of Roxburgh, called Broxmouth. It consists of a body and two wings, and a fine paved court between the wings, with a good avenue coming up to it, and a spacious parterre, adorned with statues, behind it; the whole in the middle of a sine park, prodigiously planted with trees in great thickets between it and the sea; for the gen-

tlemen

tlemen of Scotland are now fet upon planting forest-

trees, as well for ornament as profit.

A little farther is the castle of Tenningham, a noble old seat of the earls of Haddington, of late years greatly improved. Many thousands of trees are planted in a fandy down, or links, as they call them here, between the house and the sea, which are come to such perfection, that the present earl will be able to cut down great quantities every year for sale, to the no small addition to his estate; and this too, from lands that were formerly of little or no value.

On the fouth-west side of Dunbar, under the mountains, near a place called Dun-hill, is the field where the battle was fought between Oliver Cromwell and general Lessy, commander of the Scots army, where the desperate sew, (for Cromwell's army was not above 8000 men), deseated and totally overthrew the great army of the other side, killed 6000 of them, and took

10.000 prisoners, to the surprize of the world.

Here we turned out of the way, to see the marquis of Tweedale's fine park at Yester, or Zester; in the centre of which stands a very noble house, but in a

too low fituation.

The earl of Tweedale, in the reign of king Charles II. having feen the plans of Greenwich and St. James's parks, was so pleased with them, that, as soon as he went down into Scotland, he laid out the plan and design of all those noble walks and forests of trees, which he planted here. A gentleman, whose judgment I can depend upon, told me, that if ever those trees came to be worth but six-pence a-piece, they would be of more value than the fee-simple of the whole paternal estate of the family. Nor is this unlikely, if it be true, that his lordship, and his immediate successor, planted above 6000 acres of land with fir-trees; and wherever any of them failed, they were constantly renewed the next year.

D 3

The park itself is faid to be eight miles round, and exceeds, in many respects, (particularly as to walling and planting) Richmond park in Surry: but the plantation of fir is not confined to this estate; for the family has another feat at Pinkey, near Muffelburg, where the fame lord planted also a great number of trees, as his fuccessors have likewise done at another feat, which they had in Fife, near Aberdour, which

now belongs to the earl of Moray.

As this planting is a great encouragement to the nobility of Scotland to improve their estates by the same method, fo we find abundance of gentlemen follow the example; infomuch, that you hardly fee an house of note, especially in the south parts of this country, but is adorned with groves and walks of fir-trees about it; by which we may reasonably expect, that in a little time Scotland will have no need to fend to Norway for timber and deal, but will have sufficient of her own, and, perhaps, be able to furnish England

too with confiderable quantities. This noble palace stands about a mile from the park-gate, to which you go by a paved coach-way through a thicket. It is of free-stone, curiously wrought, of 120 feet in front, and 60 feet deep, and on each fide of the fore-front are two pavilions or wings. The offices under ground are very noble, and vaulted with paved galleries of communication. You enter the body of the house up fix or eight steps into a large hall 36 feet high, and behind it a falon from the garden of the fame height; and at top is a gallery for music, which opens into both, exactly as at Blenheim House, near Woodstock. The rooms of state, which run on each fide of this falon fronting the garden, are very stately, and of an exact symmetry; and those from the hall have no communication with the apartments in the two parlours. flone stair-case leads you up to the the apartments above, ballustraded with iron.

The parterres and garden behind the house are very spacious, rising up by an easy ascent into the park. A handsome bason is in the middle of the parterre, with a jet d'eau, with four good statues, one at each corner. There are abundance of ever-greens, and green, flopes regularly displayed; and to the west of the garden, on an artificial mount, is a pleafant fummerhouse. At the upper end of the garden, fronting the falon, are a pair of iron gates, which open into the park. The green-house joins the pavilion to the west, as does a laundry to the east. There is a pretty rapid stream runs by the house, and by its rustling among the trees as it runs through the park, makes the whole very rural. There is a pretty bowling-green by this river fide, and the stables, hen-house, and coach-houses, are at a distance in the park, as is the custom in all the great houses I have yet seen in Scotland. Every nobleman's house hath what they call the mains, where their land labourers, grooms, and every body belonging to the stable and poultry, reside.

About two little miles from Yester, I arrived at Lethington, the ancient feat of the Maitlands earls of Lauderdale. It is an old tower, full of good conveniencies, and one good apartment made by the duke of Lauderdale in the reign of Charles II. who also inclosed the park with a stone wall. There are some beautiful avenues in this park, and a great deal of planting

round the house.

From the town of Dunbar to Edinburgh the country may be reckoned as fruitful, pleafant, and rich, as any in Scotland, or, indeed, as most is England. The fea is on the right-hand at a moderate distance, and the hills on the left, farther off, which are habitable, and feed large flocks of sheep, and have many open

roads leading over them from Edinburgh, and other

parts, towards England.

The most material thing this country wants, is more inclosed pastures, by which the farmers would be enabled to keep a sufficient stock of cattle well soddered in the winter; and thereby not only be furnished with store of butter, cheese, and beef, for the market, but likewise, by the dung of the beasts, enrich their soil, according to the unanswerable maxim in grasing, that stock upon land improves land

From Dunbar we pals another river Tyne, which, to distinguish it from the two Tynes in Northumberland, I shall call Scots Tyne, though not so distinguished here. It rifes in the hills above Yester, and, watering part of a fine and pleasant vale, runs by Haddington, a royal burgh, and an old, half ruined town, with the remains of an old nunnery. It was formerly large, handsome, and well-built, and reckoned very strong; for, befides the walls of stone, which were in those times esteemed very good, the English fortified it with lines and bastions. Four of which latter were very large, as may be feen by what remains of them to this day. It had also a large ditch, and was so strong, that the English, commanded by Sir George Wilford, defended it against a great army of French and Scots, though the garrison was almost all swept away by the plague, till it was relieved from England, when they quitted it, after demolishing the fortifications.

They have a good stone bridge here over the Tyne, though the river is but small. The church was large, but has suffered in the ruin of the rest, and but part of it is repaired, though large enough for the number of inhabitants. There are in it some monuments remaining of the dukes of Lauderdale, and other Maitlands, ancient lords of this part of the country; but as the choir of this church is open and desaced, they

have fuffered with the rest.

The

In and about this place I faw something of a manufacture, and a face of industry, which was the first I had hitherto feen the least appearance of in Scotland; particularly, here was a woollen manufacture, erected by a company or corporation for making broad-cloth, which they call English cloth; and as they had English workmen, and English wool, they really made it very good; but I cannot fay they could bring it so cheap to the market, as they do in England. This was the reason, that though, before the late Union, the English cloth being prohibited upon fevere penalties, their own cloth supplied them very well; yet, as soon as the Union was made, by which the English trade was opened, the clothiers from Worcester, Gloucester, Wilts, Somer fet, Devonshire, and Yorkshire, brought in their goods, and, underselling the Scots, those manufacturers were not able to stand it *. However, the people turn their hands to other things, are still employed in spinning, dying, weaving, &c. and carry on a good deal of that fort of bufiness.

On the north fide of the mouth of the Forth stand the remains of Tantallon castle, infamous in the Scots history, for being the seat of rebellion in the reign of king James V. Hence came the odd fancy among the

^{*} Within these few years, however, the cloth manufactory has hade great progress.

D 5 foldiers,

foldiers, that the drums beating the Scots march, which was invented by the king's foldiers when they marched against the earl of Angus, who held out this castle against him, said, Ding dong Tantallon. But it is now no more a fortress, being intirely demolished.

Over against this, in the mouth of the same river, stands a steep rock, called the Bass, inaccessible on all sides, except by one narrow passage. It was formerly slightly fortified, rather to prevent its being made a retreat for pirates and thieves, than for any use it could be of to command the sea; for the entrance of the Forth is so wide, that ships can go in and out without the least danger of being hurt by any thing that

could be offered from the Bass.

In the times of the late king Charles II. and his brother king James VII. it was made a state prison, where the western people, called in those days Cameronians, were consined, for being in arms against the king. And after the Revolution a desperate crew of people got possession of it; and having a large boat, which they hoisted up upon the rock, or see down, at pleasure, committed several piracies, took a great many vessels, and held out the last of any place in Great Britain for king James: but their boat being at last either seized or lost, and not being seasonably supplied with provisions from France, as they used to be, they were obliged to surrender.

The Solan geese are the principal inhabitants of this island, a fowl rare as to its kind; for they are not found any where in Britain, that I can learn, except here, in some of the lesser islands in the Orcades, and in the island of Ailzye, in the mouth of the Clyde. They come as certainly at their season, as the swallows or woodcocks, with this difference (if what the people there tell us may be depended on), that they generally come exactly to the very same day of the

month.

They feed mostly on herrings; and therefore it is observed, they come just before, or with them, and go away with them likewise, though it is evident, they do not follow them; for they go all away to the North, but whither, is not known. As they live on fish, so their flesh has the taste of sish, which, together with their being so exceeding fat, makes them, in my opinion, a very coarse dish, rank, ill-relished, and soon cloys the stomach. But here they are looked upon as

a dainty.

They

It is a large fowl, rather bigger than an ordinary goofe. It is web-footed, but its bill is pointed like a crane or heron, only much thicker, and not above five inches long. When they are coming, they fend fome before to fix their mansion, which, for that reafon, are called fcouts. The inhabitants are careful not to disturb them, till they have built their nests, and then they are not to be frightened by any noise, whatsoever. They lay but one egg at a time, which they so dexteroully fix by one end to a point of the rock, in the middle of the nest, that if it be pulled off, it is difficult to fix it so any more. They hatch it by holding it fast under one foot, and seldom leave it, till it be hatched. The fish caught by the old ones often ferve the inhabitants for food, and the sticks they bring to make their nests supply them with suel. make great profit both of the flesh and feathers of their young ones, which are taken from their nests, by one let down the rock with a rope. When young, they are of an ash-colour; but when old, white.

At the top of the rock is a fresh-water spring, with a small warren for rabbits; but the bottom of it is almost worn through by the tide. It was formerly the possession, and sometimes the seat, of the ancient samily of Lauder, who a long time resused to sell it, though often solicited to it by several kings. King James VI. told the then laird, "He would give him

D 6 whatever

whatever he pleafed to ask for it;" whereby that gentleman had a fine opportunity of making a good batgain: but after he had told his majesty, that he would fell it upon these terms, and the king defiring to know what he would alk, he answered, "Your majesty must e'en refign it to me; for I'll have the ald craig, (i.e. rock) back again." However, the family, at last, coming to decay, it was purchased by king Charles II.

From hence, keeping the shore of the Forth, due west, we find a range of large and populous villages

all along the coast, almost as far as Leith.

All this part of the country is delightfully spread with the feats of noblemen and gentlemen; as the duke of Roxburgh's near Dunbar, the earl of Haddington's at Tinningham, both already described; the lord Bellhaven's, at Bellhaven; and that of the family of Sir Hugh Dalrymple, who have fine feats at the burgh of North Berwick, (where is a small, but pretty good market) Hales, and in the neighbourhood of this place.

The house and estate of Dirleton, now in the family of Nisbit, is pleasantly seated in this part of the country; as are Clerkington and Ormistoun, thriving little towns, belonging to the family of Cockburn; round which they have an handsome estate, so well planted atid improved, that I do not remember to have ever feen a more beautiful spot of ground. They have alfo a pretty good feat here; but when I faw it, it was

much out of repair.

I must here add the ancient and noble houses of Seton and Winton, both palaces (for so they deserve to be called), of the late earl of Winton, who did so many weak and rash things in the affair of the rebellion in They are now in a state of ruin, as is the eftate on which they stand; which, for its value, is as fine as any in Scotland, laying all contiguous with itfelf, and valued at almost 5000 l. sterling per annum; but, all being under forfeiture, it was fold to the

York-Buildings company. The fine gates, and stone wall, were demolished by the government, after it had been made a garrison by the Highlanders. The name Seton was given the family from the term fet-on, which one of the ancestors of it used to the soldiers he commanded, when entering upon an engagement. They were reckoned a very gallant family; and no true Scotsman can well omit telling the memorable ftory, that in the year 1332, when Edward IL came before Berwick, where Sir Alexander Seton was then governor, he fummoned him to furrender, and threatened to hang his two fons, whom he had among his hostages, if he delayed. Accordingly a gallows was erected near the town-wall, and the young men were Tenderness for his children began to led forth. move the governor, when his lady (of the name of Cheyne) came and told him, "He and she were both young enough to have more children; but if he furfendered, he could never recover his honour." Upon

4. They take great quantities of oysters here also, with which they not only supply the city of *Edinburgh*, but carry abundance of them in large open boats, called cobles, as far as *Nowcostle upon Tyne*; from whence

the generally bring back glass bottles.

At feveral of these villages are little moles and harbours, or piers, built up at a considerable expence, for securing the ships that come to load salt, and other goods; as at North Berwick, Aberlady, Preston, Preston-pans, (which is also noted for good malt-liquor), Cockenny, Port-seaton, &c.

Near Preston-pans, so called from the falt-pans there, was fought the unhappy battle between the king's forces, under the command of Sir John Cope,

and the rebels, in October, 1745.

We came next to Musselburgh, an ancient burgh of regality. In this town are many hands employed in the woollen manufacture, especially in coarse stusses for the use of the poor; and they have continued many years successfully this branch of trade without any rival.

Musselburgh is a pretty little market-town, upon the river Esk, over which is a good stone bridge. The main street is broad, and planted with two rows of trees, in some of which are lamps, to be lighted up in the winter season; which give it a genteel appearance; and from the town to the bridge, is a neat walk, planted with trees, and senced off from the carriageroad.

A little west from this lies Fisher raw, so called from a very large row of houses, mostly inhabited by sishermen, who were formerly more numerous here than at present; for the mussel-trade, which was of old reckoned very valuable, is now given over; and their

their chief bufiness, at present, consists in catching cods, haddocks, whitings, and some few shell-fish.

More to the fouth are two small villages, called New-bigging, and God-speed-all; but they are so nearly joined to Musselburgh and Fisher-raw, that a stranger would take them to be all one continued town. Nevertheless, they have not had a church since the Reformation, but are only a part of the parish of Inveresh, an adjoining village, so called, because it stands at the instruct of the river Esk, which, though it be sometimes so full of water as to overslow its banks, yet, being rapid, it is not made navigable.

The village of *Inveresk* enjoys so good an air, that the eminent Dr. Pitcoirn called it the *Montpelier* of Scotland. It is very full of people, and there are several very handsome houses and gardens in it, which invite the citizens of Edinburgh to take lodgings here in the summer, as the Londoners do at Kensingtongravel-pits, Hampstead, Hackney, and Highgate.

But the glory and beauty of this parish is Pinkey, which formerly belonged to Seton, earl of Dunfermling, but now to the marquis of Tweedale, who usually resided here, before his house at Yester was finished; which, though it is the most magnificent building, yet is not so agreeably situated as Pinkey, which stands near the sea, just as we enter into Musselburgh.

In the court before the house is a large stone well, covered with an imperial crown of stone, supported by pillars of the *Ionic* order. The great hall on the right, as you enter, is adorned with views of the great cities of *Italy*; and in a drawing-room adjoining to it, is a billiard-table. The great stair-case on the lest is ballustraded with iron, and crouded with pictures.

The first apartment consists of a dining-room, drawing-room, and bed-chamber, all very spacious, curiously wainscotted with oak, and hung with the seasons in tapestry, of the small sigures, and best fort:

·he

the bed is of crimson velvet, in an alcove, neatly supported with pillars. The chimnies are of marble, and above that of the dining-room is painted the finest inside of a church that is any where to be seen.

The great gallery is very long and spacious, the ceiling whereof is full of Latin inscriptions, suitable to the several paintings. Here are, a family picture of the lord Seton, with his four fons and daughters, by Hans Holbein; Mr. Henderson, the Covenanter, by Vandyke; the whole length of king Charles I. and his Chancellor, the earl of Dunfermling, in his robes, by the same hand. The first earl of Tweedale, with his eight fons and seven daughters, all in one picture, as big as the life, takes up almost one end of the room. There are fine altar-pieces, passion-pieces, and others of that kind, which were faved from plunder out of monasteries at the Reformation. Here is likewise a good picture of the earl of Strafford, and another of the duke of Lauderdale (who married his only child to the heir of his family), with great numbers of family pictures of the Hays and Setons. There is also well preserved the genealogical tree of the family, from the year 970 to this time; viz. the Hays, Giffords, and Frasers. But most of the pictures have been carried to Yefter.

The parterre behind the house is very large, and nobly adorned with ever-greens; and on each side of it spacious gardens. The whole stands in a park, which is, however, now greatly reduced in extent; but it was formerly well planted with fir-trees, and

walled round with stone.

Near this place was fought a battle by Edward Seymour, duke of Somerfet, when he came to force the Scots into the marriage of their young queen Mary with his nephew king Edward VI. which was, doubtless, a very coarse way of wooing. Here was a great slaughter of the Scots: but though the English won the battle,

yet they lost their prize; for the young queen was privately embarked, carried to France, and afterwards married to the dauphin, who became king Francis II.

The English call this the battle of Musselburgh; but fome Scots gentlemen riding out with us to shew us the place where the action was begun and ended, we all agreed, that the Scots are in the right, who call it

the battle of Pinkey.

Adjoining to the feat of Pinkey, is a grand machine wrought by water, for pumping water out of the coalmines, of which there are great numbers hereabouts, and almost in every part of Lothian. They also make vast quantities of white salt in this shire; and it produces great plenty of lime stone. In the reign of James I. a mine was found in it, out of which they got a great deal of silver.

Lothian and Stirlingshire lie very commodiously along-fide the Forth for exporting their coals, called

Scots coal, to different ports of the kingdom.

I now approached the capital city of Edinburgh; but must say a word or two of its situation, before I enter it. Standing then, at a small distance, and taking a view of it from the east, you have really but a very consused idea of the city, because the situation being in length from east to west, and the breadth ill-proportioned to it, you view it under the greatest disadvantage possible; whereas, if you turn a little to the right-hand towards Leith, you have a very hand-some prospect of it; and from the south you see it to yet more advantage, because it is increased on that side with new streets.

At the extremity of the east-end of the city stands the palace of Holy-rood-house; leaving which, a little to the lest, you come through a small suburb to the entrance, called the Water port. From hence, turning west, the street goes on, in a strait line, through the whole city, to the castle. It is above a mile in

length;

length; and is, perhaps, the largest, longest, and finest street, for buildings. and number of inhabitants, in the world.

From the palace-door, which stands on a level with the lowest of the plain country, the street begins to ascend very gradually, being no where steep; but this ascent being continued for fo long away, it is easy to imagine, that the farther part must necessarily be very high; for the castle, which stands, as it were, at the extremity, west, as the palace does east, makes, on all the three fides (that only excepted which joins it to

the city) a very steep and frightful precipice.

Together with this continued ascent, you are to suppose the edge or top of the ascent so narrow, that the street, and the row of houses on each side, take up the whole breadth; fo that, which way foever you turn, you go down hill immediately; which is fo fleep, that it is very troublesome to those, who have not very good lungs, to walk in those side-lanes, which they call Wynds. By this description you will perceive, that the city stands upon the narrow ridge of a long ascending mountain.

On the north-fide of the city towards the west-end of it, where the castle stands, was a lough or lake of water, which had a fmall brook that run through it; fo that it could not be faid to be quite standing. North Lough is now quite drained, and a most magnificent bridge built over the hollow. bridge confifts of five arches, three very wide and high, elevated upon lofty piers; and on each fide one of fmaller dimensions. The main design of this bridge

b. Ma Min is, to take off from the very great declivity, which would otherwise be in the intended new road, which is to go this way to Leith; for very little water runs under it. On this side they have begun to build, what is to be called the New Town. The houses already erected, are airy and handsome, built entirely in the English taste; so that each family are to enjoy a whole house to themselves; which neither is, nor ever can be the case, in the Old Town. There was formerly another lake on the south-side of it, which, being now filled up, is built into a street, though so much lower than the high street, that, as I said before, the lanes between them are very steep.

The town is so ancient, that no history has recorded when, by whom, or on what occasion, it was built; yet it seems most natural to conclude, that such a sinuation could not be chosen, but for a retreat from the outrages and attempts of the Britons, Saxons, Danes, or other enemies: for, having an impregnable castle at the west-end, and a lake on either side, the inhabitants had nothing to defend, but the entrance at the

aft end, which it was eafy to fortify.

If this was not the reason for chusing the situation, what should have hindered them from building the city in a pleasant, delightful valley, with the sea lowing up to one side, and a river running through he middle of it, such as that space of ground, beween it and the sea, where the town of Leith stands? There they would have had a noble, pleasant, and most seful situation, a very sine harbour for their trade, a good road in the Forth for their ships of burden; a leasant river, which, with small art and charge, night have been so drawn round the city, as to have illed its ditches, and made its fortifications almost imeregnable, as the French did, when they sortified

Ailne, brother to the celebrated architect of Black-friars bridge, planed and executed this bridge.

Leith.

Leith. Or, had they gone to the fouth-side of the city, and extended it towards Libertoun and Goodtrees, they had found a plain large enough to have contained another London, watered on the fouth part with a pleafant brook, capable, by the help of pipes, to have conveyed water into every street and house.

A great part of this convenient space for building a noble city has been made the property of the corporation; and the magistrates for the time being have always refused to suffer any houses to be built upon it, because the old city would then be soon deserted, to the great loss of all the proprietors of the buildings

there, many of whom it would totally ruin.

Most of the houses in Edinburgh are built of a rough kind of stone, undressed, because of its extreme hardness; but the window-cases and corner-stones are generally well dressed: and so indeed are the whole from of many houses, particularly in the Parliament-close, and some parts of the High-street. They are mostly covered (especially the new buildings) with blue slate.

Every stair-case is called a turnpike or house, and the whole building is termed a land, with the addition of some name to distinguish it from another. The families of the best rank, have generally but one sloor, some only half a sloor, and others less. The gentry take the first, second, or third; the middling

and poor mount higher.

The women here are many of them very handsome; generally light-haired, and fair. They are much more industrious than the men, taking laudable pride in having most of what they wear the product of their own hands. They are great admirers of white thread stockings (a fashion the English ladies are come into), and scruple not to shew what they are as they walk; nor are the women of either the north or south part of Britain half so shy as they used to be in this particular. But this may be said in praise of the Scottish wo-

The

e.

From the principal street are many wynds, or narrow turnings, and it is not easy for a stranger to find his way to any one of the dwellings, which in thefe wynds are, as it were, piled one upon another. there is in Edinburgh a very useful kind of porters, called cawdys, who attend at taverns, coffee-houses, and other public places, to go on errands, and know every body of any note in the town. These boys, though they are in rags, and lie every night upon the stairs, or in the streets, are yet considerably trusted, and have seldom proved unfaithful*. They are subject to a kind of captain or magistrate, called the constable of the cawdies, who punishes any neglect or misdemeanor generally by fine of ale or brandy, but fometimes corporally. Most of them are uncommonly acute, and execute whatever employment is affigned them with great speed and address.

Having thus confidered the city in its outward appearance, and in its fituation, I must next look into its inside, where we shall find it (notwithstanding all its disadvantages) a large, populous, rich, and even

royal city.

[·] For the trifling confideration of a penny, a cawdie is obliged to carry a letter or message to the remotest part of Edinburgh. It is at the Cross, and in the neighbourhood of the Exchange and Pariament-bouse, where they commonly ply.

From the palace-gate westward, the street is called the Canongate, where the canons of the abbey formerly refided; which is a kind of fuburb by itself, as South. wark is to London. In this part of the street, though otherwise not so well inhabited as the city itself, are feveral very magnificent houses of the nobility, built for their town-residence, when the court was here Of these the duke of Queesberry's, the marquis of Lo. thian's, and the earl of Murray's, are the chief: the first and last are very large and princely buildings, all of free-stone, large in front, and have good gardens behind them.

At the upper or west-end of this street, where it joins to the city, is a gate, which parts the city from the fuburb, but does not discontinue the street, which widens, and is more spacious, when you are through This is the famous Nether-bon the gate, than before. Port, whose doors were like to have been taken away by the Parliament, when the affair of captain Pro teous was under their confideration. Though the op position of the Scots in general to the proposal of taking away the doors of this gate was fo great as to preven that measure being then adopted by Parliament, ye they have fince, (about the year 1766) of their own accord, taken down the whole gateway, and thereb laid the Canon-gate and High-street entirely open u each other. For while the Nether-bow Port was stand ing, the paffage through it was so narrow, as frequent ly to occasion a stoppage of carriages.

Just at this gate, on the outside, are two streets, on of which is called St. Mary Wynd, and the other Leith Wynd: the first leads out of the city, south, in to the great road for England, by the way of Kelle and at the foot of it is a gate turning westward in the low street, called the Cowgate, because the cattle are often driven through it to and from the great mar ket-place: the other leads north into a fuburb called

It must not be expected I should describe all the buildings of the city; I shall therefore touch upon some few and go on. The first of any note is a fine house, on the south-side of the street, a little within the gate, belonging to the marquis of Tweedale, with a plantation of lime-trees behind it, the place not allowing room for a large garden: adjoining to this are very good buildings, which, if fet out in handsome ffreets, would adorn a noble city; but being crouded together in narrow wynds and alleys, deferve no notice.

A little farther, on the same side, is the Trone kirk; and near it, in the middle of the street, stands the guard-house, where two companies of disciplined men, cloathed and armed like grenadiers, at the charge of the town, do duty every night, and keep the public peace of the city. Almost opposite to this church is the street or opening from the bridge, which connects the old city and the new, in the same manner eir own as London bridge connects London with Southwark. thereby About mid-way between the Nether-bow and

About mid-way between the Nether-bow and the castle, is the great church, which, before the Reformation, was collegiate, and dedicated to St. Giles; equent but it was afterwards divided into feveral preachingplaces, and districts of the city were allotted to them, ets, one fo as to be parochial When king Charles I. erected e other a new bishopric at Edinburgh, which before that time was in the diocese of St. Andrew's, it was made a cathedral, and the dean was forenoon minister of that ard in part of it called the New Kirk which is the choir, chancel, or castern part. In it is a gallery for the king, or his commissioner. Here also the magistrates as femble, and the judges in their habits, in time of section

fion. In a large chapel, on the fouth-west part of this church, the general affembly hold their fessions, as does also the commission of the assembly, in the inter-

val between the general meetings.

The great cross under the tower is called the Old Kirk; and the front or west-part of the great church is divided into two parts: that on the fouth is called the Talbooth Kirk, and that on the north Haddo's Hole, from the laird of Haddo, who, being a great royalift, and anti-covenanter, was kept prisoner in a vault

there, till he was beheaded.

The steeple in the middle is but low, though of good architecture; the fummit of it refembles an imperial Here they have a fet of bells, which are not rung out as in England for that way of ringing is not known in this country), but are played upon by the hand with keys, like an harpfichord, the person playing having great leather covers to his fifts, by which he is able to strike with the more force. They play all manner of tunes very mufically, and the town gives a man a yearly falary for playing upon them from one to two every day, Sundays and holidays ex-

cepted. On the fouth-fide of this church (formerly the church-yard) is a square of very fine buildings, called the Parliament close, the west and south-sides of which are mostly taken up with the parliament-house, the fe veral courts of justice, the council chamber, the exchequer, the public registers, the court for the royal boroughs to affemble in, the lawyers library, the postoffice, &c. The great church makes up the northfide of the square, and the east and part of the south fide is built in private dwellings, very stately, losty, and strong, being seven stories high to the front of the square; and the hill they stand on having a very steep descent, some of them are no less than fourteen stories high backwards. In the middle of this square

The Parliament-house is a stately, convenient, and large structure. Over its entrance are the arms of Scotland well cut, with Mercy and Truth on each fide for supporters; and this inscription, stant his felicia regna; importing that these virtues make kingdoms happy. And under the arms was this motto unio unionum; relating not only to the union of the two crowns, but fignifying that their advice was necessary to the maintenance of it. The room for the meeting of the Parliament had, on that occasion, an high throne for the fovereign, or the commissioner, with benches on each fide for the nobility and bishops, and forms conveniently placed in the middle, for the commoners. Without the area, was a pulpit for fermone to the Parliament on particular occasions; and behind the pulpit a large partition for others, besides the members, to hear the sermons, and debates of the house, when they thought sit to allow it. This building, in some measure, resembles Westminster-hall, and, though not quite so large, has a much more curious roof. In the fouth or upper end of the hall, one of the ordinary judges fits every day in fession time, o hear causes in the first instance. At the west-end of it are kept the sheriff and commissary courts. Near he north-end is the town council-house, or Guildall, and over it is the justiciary or criminal court. he post- from what they call the outer-house (where the north ord ordinary fits) into the inner, where fit the other fouth 4 judges, or lords of fession; which is the supreme, lost, will judicature of Scotland; over which are apartments

ront of Dr the lords of Exchequer.

In May 1752, a fine marble statue of Duncan forbes, Esq. late lord president of the court of Session, as set up in the outer Parliament-house. His great VOL. IV. merits,

74 SCOTLAND.

merits, loyalty, and abilities, are too well known, to need encomiums here. He is represented sitting in his robes, papers in his lest-hand, leaning upon the chair, the other extended. The following inscription is placed below it in gilt letters:

DVNCANO FORBES DE CVLLODEN,

SVPREMÆ IN CIVILIBUS CVRIÆ PRÆFECTI,

JVDICII INTEGERRIMO,

CIVI OPTIMO,

PRISCÆ VIRTVTIS VIRO,

FACVLTAS JVRIDICA LIBENS POSVIT,

ANNO POST OBITVM QVINTO.

C. N. M,DCC,LII.

Thus Englished.

To Duncan Forbes of Culloden, president of the supreme Civil Court, a most upright judge, a most valuable citizen, a man of unblemished virtue, the faculty of advocates with pleasure erected this monument, in the fifth year after his decease, A. D. 1752.

In the lower part, under the Parliament-house, is a noble library of books and MSS. belonging to the col-

lege of Justice, or gentlemen of the law.

The great opening into the High-street being the only passage into it for coaches, is at the north-east corner, through a narrow street called the Lucken-booths; a little from which was the market-cross, where all their proclamations and public acts are read and published by heralds, and found of trumpet. The cross is now taken entirely away, but the place where it stood is still distinguishable from the rest of the street, by being paved in a different manner. Here is the great parade, where gentlemen meet for business or news, just before the Exchange, every day from eleven to one.

The Royal Exchange is a handsome building, lately erected, forming a large square, and intended for the merchants to assemble in; but they still continue to meet, at 'change hours, in the open street, directly before the Exchange, where the cross formerly stood. From a grand stair-case, in the back part of the Exchange, is a fine view of the New Town, Leith, the Forth, and ships in the road; and, upon a clear day, the coast of Fife is full in sight.

Near the west-end of the great church stands the Tolbooth, or common prison, as well for criminals as for debtors. It was formerly the place of residence for the provost of St. Giles's, as most of the adjacent houses were for the canons and choiristers of that

church.

The

Opposite to the great church, and in the middle of the street, stands a row of houses and shops, called the Luckenbooths, which interrupt the beauty of this place; but those builings past, the street opens again to its former breadth, and is now called the Lawnmarket, from the Linen market being kept there. This part of the street extends west to a narrower one, which leads to the Castle hill. At the upper end of it is a stone building appropriated to several public offices of lesser value, called the Weigh-house; for below stairs are warehouses, with public weights and scales for weighing heavy goods.

Here the street parts into two, one of which leads to the Cafile-bill, as already noticed; and the other turns south-west, and, descending gradually, leads to the Grass-market, a place very like Smithsheld in every sespect, where is kept a weekly market for black tattle, sheep, horses, &c. This street, which is called the Wess-bow, is inhabited mostly by wholesale ealers in iron, pitch, tar, oil, hemp, slax, linseed, rugs, woads, and such-like heavy goods. On the

E 2

Castle-

Castle-hill is a curious and useful building, being a refervoir of water, of great use to the city.

This city hath feven gates, or ports, as they are here

called, viz.

1. The Nether-bow Port: this is the chief gate; it was magnificently built in 1606, and adorned with towers on both fides, and a fine spire on the top. This is the entrance from the palace, and the principal fuburb called the Canon-gate. (Entirely taken down, 1768.)

2. The Cow-gate Port, at the east end, likewise gives entrance to the street of that name, leading to

the abbey by a back way.

3. The Potter-row Port, gives entrance to the fuburb fo called, and leads to Dalkeith, Kelfo, &c.

4. The Society Port, fo called from the fociety of brewers, who had a great square court near it, now built into a handsome square, after the English manner.

5. The West Port, the only gate at the west-end of the city, which leads through a large fuburb to Glafgow, Stirling, Queen's-ferry, and from thence to the west and north Highlands.

6. The New Port, at the east-end of the lake, leading northward towards a village called Mouter's

bill and Leith.

7. The College-kirk Port, leading also to Leith.

The markets here are very well supplied with a the necessaries of life, and are mostly kept in distinct market places walled in, and referved for the particular lar things they are appointed for; fuch as,

- I. The meal market.
- 4. The fish market. 2. The flesh market. 5. The corn market.
- 3. The poultry market.
- 6. The leather market.

Besides these, is a weekly market for all forts woollen manufactures, and linen, kept in that parts the High-street, called the Lawn-market, just no

mentioned. In the same street, below the cross, is an herb and fruit market kept every morning, which abates before noon, fo that it is no incumbrance. The market for black cattle, sheep, horses, and grass, is kept in that large space of ground within the West

Port, called the Grafs-market.

On the fouth-fide of the city, towards the east end, flands a large building, erected at the charge of the furgeons and apothecaries of this city, in which is their great hall, hung round with the pictures of all the eminent furgeons of this place, that have flourished fince this building was founded. Here they have also a theatre for diffections, and a chamber of rarities, in which are feveral skeletons of uncommon creatures. a mummy, and many other curiofities.

Near the Potter-row Port stands the college, or university. It consists of three courts, two lower, and one higher, equal to the other two. These courts are encompassed with buildings for the use of such students as please to lodge in them; for they do not live in common, nor are they obliged to refide, but only to attend their classes at certain hours. There is an high tower over the great gate, looking to the

city.

The public schools are large and commodious: there are accommodations for students, handsome dwellings for the professors, and fine gardens for their recreation. It was founded in 1580, by king James VI. upon a petition from the city to grant them a charter with the privilege of an university; but the foundation was not perfected till 1582. The perfons established by the foundation were, a principal or primate, a professor of divinity, four regents, or masers of philosophy, and a professor of philology, called rof. humaniorum literarum, or regent of humanity. n 1640, the town added a professor of mathematics: o which have been lately added professors of ecclesiThey have a good library, which was founded by Clement Little, one of the commissaries of Edinburgh; fince which it is much increased by donations from the citizens, persons of quality, and others, who had their education there. The library is neatly kept, well furnished with books put in very good order, cloistered with wire doors, which none but the keeper can open, which is more commodious, and less encumbering, than multitudes of chains, used in many other libraries. The books given by the grand benefactors are kept in distinct apartments, and the donor's name over them in letters of gold.

Over the books hang the pictures of feveral princes, and of the most eminent reformers at home and abroad; and near them is kept the skull of the famous Buchanan, very entire, and so thin, that the light may be seen through it. It was deposited there by Mr. Adamson, formerly principal of the university, who procured it to be taken out of his grave, and sastened some Latin verses to it in his commendation. The original of the Bohemian protest against the council of Constance, for burning John Hus and Jerome of Pragu, anno 1417, is there, with 105 seals of Bohemian and Moravian grandees annexed to it. It was procured by a Scots gentleman in his travels, and given to the university.

At the farther end of the library is a stair-case, which leads to the higher and lower common halls, when they hold their commencements and college-entertainments. In this place are several maps, globs books, and rarities; and, among others, a crooked horn, cut out of a woman's head when 50 years old and who lived 12 years after it. It is several inches

In this higher common hall, which is a very spacious room, are placed fuch books as have been bought by, or given to the college, fince the library below was full; and in the fouth-end of it is a curious and noble museum, collected by the very eminent Sir Andrew Balfour. It contains a vast treasure of curiosities of art and nature, domestic and foreign, from almost all parts of the world; and is greatly valued by the virtuoli, containing some rarities that are not to be found, either in those of the Royal Society at London, or the Ajhmolean at Oxford. Sir Robert Sibbald, having a mind to engraft his name and merit on that of the celebrated Balfour, made a prefent of a great number of shells and other curiofities, to the college, on condition the magistrates would print the account of it, called Auctarium Musei Balfouriani e Museo Sitbaldiano; to which I refer the reader.

Eastward from the college is the high-school, well endowed, and with proper apartments for one master and four ushers, who teach youth grammar and the-

toric.

In Gray's-close, near the Cowgate Port, is the minthouse, in a large court, with neat and convenient buildings, and other accommodations for the master, officers, and workmen. It is now disused for that purpose, but is a sanctuary, or place of privilege.

At a small distance from the college are two neat hospitals, with pretty gardens to each of them; and a little farther is the church yard of the Franciscans, or Grey-friars, the common burial-place for the whole city within the walls, where are a great many curious monuments. It contains about two acres of ground.

E 4 Adjoining

Adjoining to it is Heriot's Hospital, a large and stately building, the most magnificent of its kind in the world, adorned with a consecrated chapel, large walks, delightful greens, and pleasant gardens. It was built by the reverend Dr. Ealcanqual, to whom George Heriot, jeweller to king James VI. lest near 17,000 l. to be disposed of in pious uses, which that worthy dean of Rochester did, by building and endowing this house, and giving statutes to it, which he ordered should be unalterable. It is a nursery for an indefinite number of the sons of freemen, who are maintained, cloathed, and educated in useful learning, till they are fit for apprenticeship, or to go to the university, where they are allowed handsome salaries and exhibitions.

On the other side of the Grey-friars church-yard stands the charity workhouse for the city, where old and infirm persons are cloathed and maintained, and foundling and deserted children are taken care of, put to nurse, and educated till they are fit to go to service, or put apprentice, &c. The number of old and young who are maintained by this noble charity are computed to be upwards of 500.

On the north fide of the city, in the way to Leith, is a beautiful collegiate church, built by queen Mary of Guelders, queen to king James II. of Scotland, and dedicated to the Holy Trinity, but now parochial, though nothing but the church part was ever finished.

It is now called the College-kirk.

Near it is St. Thomas's Hospital, wherein old decayed citizens and their widows are very decently provid-

ed for, and allowed a chaplain.

Over-against it is Bridewell, or the house of correction, in which dissolute people undergo discipline, and are kept to hard labour. There is an apartment in it for lunatic and distracted persons.

and,

Of late years, Mr. Hare left a noble benefaction for a new hospital for female orphans of decayed freemen, which created a laudable emulation in many others, whose united contributions have raised another for the

fame good purpofe.

An infirmary, called the Royal Infirmary, after the example of those in London, Winchester, &c. is erected at Edinburgh, by the liberal contribution of many well-difposed persons. It is a noble building, consisting of a main body and two wings: in the front is a handlome pediment, supported by fix pillars: over the entrance is a statue of king George II. The building is four stories high; the wards large, and well accommodated for the reception of patients. The operation-room is excellently well adapted for the purpose of letting a great many persons see the operations there performed. The light is admitted from the top, by a large skylight; and ranges of feats are elevated pretty high above each other, for the more conveniently feeing the operations. On the top of the building is a dome, from whence you have a fine view of the city of Edinburgh and the neighbouring country. There was fo general a good will to the work, that the like spirit had hardly ever been known any where. The proprietors of feveral stone quarries made presents of flone to it; others of lime; merchants contributed timber; the wrights and masons were not wanting in their contributions; the neighbouring farmers agreed to carry materials gratis; the journeymen masons contributed their labour for a certain quantity of hewn stones; and, as this undertaking is for the relief of the diseased, lame, and maimed poor, even the daylabourers would not be exempted, but conditioned to work a day in a month gratis to the erection. The ladies too contributed in their own way to it; for they appointed an affembly for the benefit of the work; and, it being well attended, every one contributed bountifully

correccipline, ertment

Of

bountifully to it. It has met with no small encouragement from the nobility and gentry; and his Majesty was pleased to give 100% towards it: so that it is really a noble work.

The physicians were incorporated in 1682 by king Charles II. and have their college near the Nether-bow in the Fountain-close. They are deservedly esteemed Iearned and able, and do not give place to the physi-

cians of any country.

On the north-fide of the city, in the way to Leith, is a neat physic-garden, containing some thousands of exotic plants and simples. The botanical student owes this admirable hortus to the munificence of lord Bute, and the almost enthusiastic zeal of the indus-

trious Dr. Hope, the ingenious profesior.

Buildings for pleasure, as well as profit, are not wanting in Edinburgh. A theatre is built at the end of the new bridge in the New Town, which was raifed by the fubscriptions of a certain number of gentlemen, who let it originally to a manager for four hundred pounds a year. Mr. Ress was the first perfon who took it, and his name was inferted in the patent, which made him manager as long as he chose. A few years ago, plays were not in that repute at Edinburgh they now are. The ministers, zealous for the good of there flock, preached against them, and the poor players were entirely routed: they have now, however, once more taken the field, and the clergy leave them to their own ungodliness. During these contests, Mr. Ross found, that the benefits of the theatre did not answer the expences of it, and retreated in good time.

Our late modern Aristophanes, who imagined he had wit enough to laugh the Scotch out of their money, took it of Mr. Ross, at the same price that was originally paid for it. He brought on all his own comedies fuccessively; but, as most of the humour was

or was

local

local and particular, few people understood it. Now and then, indeed, a very civil gentleman was so kind as to explain what he had been told in London such a joke alluded to; but, as jokes always lose their strength in travelling, nobody was the wiser for the explanation. But when, in the course of acting, Mr. Foote attempted to introduce the Minor upon the stage, the ministers who had long lain dormant, now rose up in arms. The character of Mrs. Cole gave them offence. The Scotch clergy, not contented with damning the play itself, very piously pronounced all those damned who went to see it. Parties, however, rose on this occasion, and many were so wicked as to insist on its being performed. Riots ensued, the unrighteous triumphed, and the poor play was performed.

Mr. Foote, however, found, that to gain half the town was not fufficient, the whole of it being necesfary for his business; and therefore, when he perceived he could not bring them into good humour, it was his interest to retire. However, on leaving Edinburgh, he made the best of a bad bargain, and raised the rent to five hundred pounds a year, for which sum he let

it to Mr. Digges, the present manager.

The proprietors now faw the mistake they had been guilty of, in leaving it in the power of Mr. Ross to let it out to other people, and thus, in some measure, to deprive them of their own property. If any advantageous encrease of rent could have been made, they thought themselves the only persons who were entitled to it; but of this they had deprived themfelves, and put the house on a worse footing than it was at the first; for, if four hundred pounds had already been found too large a rent, five hundred must be still more distressing, and prevent the manager from bringing good actors to entertain the town. However, under all these disadvantages, Mr. Digges ook the playhouse. Some little juvenile extrava-E 6 gances,

gances, more than any natural turn for the stage, induced Mr. Digges to quit the military profession, to which he was bred, and become an actor. Driven from the first line, he took the second; and, as he could not, at that time, gain admittance to the London theatres, he became manager at Edinburgh. He has indeed done every thing which good management could do; but, it is to be seared, not greatly to his

own advantage.

The theatre is of an oblong form, and defigned after the manner of the foreign ones. I do not know its exact dimensions; but at three shillings (which is the price of admittance into the pit and boxes) it is capable of containing about one hundred and thirty pounds. The pit feems confidered here as the parterre, in the French theatre, into which gentlemen go who are not fufficiently dressed for the boxes. On very crouded nights, the ladies sometimes sit here, and then that part is divided by a partition. The ornaments are few, and in an unaffected plain style, which, on the whole, has a very elegant appearance. It is lighted with wax, and the scenery is well painted, though they do no not excel in those jeux de theatre, which please and astonish the common people in London. The whole of their machinery is luckily very bad; and therefore, much to the credit of their understandings, they have seldom any Harlequin entertainments.

The upper galleries, or, as they obligingly term them in London, the Gods, seem here very compassionate divinities. You sometimes hear the murmurings of displeasure at a distance, but they never rain down oranges, apples, &c. on the heads of the unfortunate actors. They suffer them very quietly to strut their bour upon the stage, and if then they dislike them, they

are literally heard no more.

It is probable, that, from an attention to these small and feemingly trivial circumstances, we discover more of the real manners of a people, than from the greater and more public events in life, where the passions are naturally excited, and men act under a disguise. A boisterous Englishman in London, who thinks it a part of his privilege to do what he thinks proper, provided neither the laws nor Magna Charta forbid it, when he takes a diflike to an actor, drives all the players off the stage, puts an end to the performance, and infults the whole audience. A Frenchman and a Scotchman, whom an arbitrary government in one instance, and the remains of it in the other, has fostened and humbled, keep their quarrels to themselves, consider the poor player as incapable of refistance, and shew their diflike to them only by not applauding them.

Comely Garden is a newly established place, for summer evenings amusement; and may be called the Vauxhall of Edinburgh. Here you have an orchestra erected in the garden, for music and singing; and when that part of the entertainment is over, the company have an opportunity of dancing (if they chuse it) in a couple of ball-rooms erected for that purpose. This garden is pleasantly situated near the abbey, just under Arthur's Seat, and other adjacent hills; which seem to form a natural amphitheatre, well adapted for the purpose to which this lovely spot is now appro-

priated.

It

On here,

The city is governed by a lord provost, whose office is much the same with that of the lord mayor of London; sour baillies, who, besides the power of aldermen in the government of this city, have that of sheriffs, and a common-council, ordinarily consisting of 25 persons, but extraordinarily of 38. All these are chosen annually, and the provost, dean of guild, and treasurer, are to be merchants; or if any tradesman be chosen, he must quit his trade, and not re-

turn

turn to it without leave of the magistrates and town-council; and he must also be a year or two a member of the common-council. No one is to continue in the council above two years at a time, except he be a member of it by virtue of a superior office. The baillies are to be chosen indifferently out of twelve candidates proposed, and none is to be elected deacon out of any of the source incorporated trades, except he has been a master of his trade two years at least; and must not continue deacon above two years at a time. The source incorporated trades are:

Surgeons. Wrights.
Goldsmiths. Masons.

Hammermen. Butchers.

Cordwainers. Wakers, i. e. Fullers. Bonnet-makers.

The magistrates are chosen annually upon the Tuefday next after Michaelmas-day, by 38 electors, whereof 20 are to be merchants and tradesmen, who are to chuse such as in their conscience they think best qualified; and these magistrates and the town council have the administration of the government, except in some reserved cases; such as the election of magistrates, dean of guild and treasurer, and setting of seus or leases, giving boundaries of places, and other public matters; in which cases they are to consult the sourteen deacons of trades.

None of the merchants or traders are to have any particular conventions, or make any by-laws among themselves, without consent of the magistrates and town-council, except to chuse their own deacons at the appointed time, to make persons free of their trade, or to try their work; and one of the commissioners for Parliament (when they had two) was al-

And here it will be proper to take notice of the notorious riot committed in this city on the 7th of Sept. 1736, in relation to captain Porteous, which made so much noise, and brought down upon this samous city the resentment of the legislature of Great Britain.

The case was this: one Andrew Wilson was condemned for a robbery of the public money, committed on the highway; and, on Wednesday the 14th of April 1736, the day appointed for his execution, the magistrates, being apprehensive that a rescue would be attempted, ordered captain-lieutenant John Porteous, at the head of a detachment of about 70 men of the city guard, to attend the execution, and powder and ball were delivered to them for that purpose: when, without any just cause, or necessary occasion, he ordered his men to fire upon the people affembled, calling out to them at their fecond firing, "to level their pieces, and be damned," or words to that effect, and evelling his own piece, mortally wounded one person himself; and about twenty of the guard, obeying his orders, killed and maimed a number of other persons; and by a third firing, killed and wounded many thers. This maffacre was occasioned only by the populace throwing some stones at the executioner as he was going up the ladder, when the criminal had hung about

about fifteen or fixteen minutes, and at the guard : all which however he denied upon his trial; but, after a very folemn hearing, he was found guilty of firing a gun himself, and ordering his men to fire; and so was condemned to be hanged upon a gibbet, on the 8th of Sept. 1736. The captain drew up a petition to her late majefly, queen Caroline, then regent of the kingdom, in the absence of the king; infifted on his innocence, prayed for mercy; and, great application having been made to her majesty for changing the fentence to transportation, a reprieve for fix weeks was granted; which arriving on the 2d of September at Edinburgh, occasioned the most extraordinry riot that ever was known or heard of, all circumstances confidered, except that at York against the Fews, mentioned in Vol. iii. p. 188.

For, on the 7th of September, the night before the captain was to be executed, had he not been reprieved, about ten at night, some men by surprize entered the city, and seized all the fire-arms, battle-axes, and

drums belonging to the city guard.

The mob hereupon, in a few minutes, locked and fecured all the city-gates, and, with drums beating an alarm, attempted with hammers, and other instruments, to force open the [Tolbooth] prison door: but failing, they desperately set fire to it, and burnt it When they entered the prison, they made the underkeeper open the double locks of the apartment where the captain was. He begged in vain to be spared till the afternoon; and making some resistance, they dragged him down stairs by his legs, and hurried him away. This was about eleven at night, when they marched out with lights before them. In their way to the Grass-market, passing by a barber's sign-post, fome called out to hang him up there; but it was refolved to hang him where the murders, for which he was condemned, were committed. They therefore proceeded

proceeded to the place where, on executions, the gallows used to be fixed, where they kept him above a quarter of an hour, till they opened a shop, and brought out a rope, one end of which they threw over a fign-post about twenty feet high. He defired some time to prepare for death; but was answered, they would allow him no more than those had, who were shot. They then pulled him up in the dress in which they found him; viz. a night-gown and cap. His hands not being tied, he fixed them between his neck and the rope, whereupon one with a battle-ax ftruck at his hands. They then let him down, and he having on two shirts, they wrapt one of them about his face, and tied his arms with his nightgown, and then pulled him up again, where he hung till day-light next morning; when he was cut down, and carried to the Grey-friars church. Upon inspecting his body, it appeared his left-shoulder was wounded, his back discoloured, and his neck broken.

It was observed, that this mob was under a ffricter concert, and better conduct, than usual; for, marching along to the execution, the unhappy man observing a gentleman of his acquaintance, he gave him a purse of 23 guineas, which he defired might be delivered to his brother, which they offered not to obstruct. The left indeed the prison-doors open, whereby several prisoners escaped; but after they had perpetrated this unprecedented fact, they left the arms and drums at the place of execution, where they were found next morning. During the tumult, parties of armed men, with drums, patrolled the different streets, to prevent any surprize from the king's forces quartered in the suburbs. The magistrates attending with feveral of the burgeffes, attempted to disperse the mob; but were pelted with stones, and threatened with firearms, if they did not retire. After the execution was over, they went to the lord provost's house; and, tell-

ing

ling him they were fatisfied, departed, without offering any other violence. Nay, it is faid, that to do the act with more decency, having no clergyman, they ordered two of the gravest among them to exhort the unhappy man, as they carried him to execution.

The boldness, secrecy, and conduct of this enterprize, was the most extraordinary instance of its kind that ever was known; and the keeper declaring that, though the persons who first entered and demanded the keys wore leather aprons, they were otherwise well dreffed, it made some imagine, that persons

above the vulgar rank had an hand in it.

Be this as it would, the infult on the fovereign authority was too flagrant to be overlooked. Proclamations, with rewards of 200% fterling, were issued for apprehending the rioters; and when the Parliament met, vigorous measures were taken in the affair, The lord provost, Alexander Wilson, Esq. was order. ed up to London in custody; the magistrates were ordered up also, to attend the House of Lords at London; and finally, an act of Parliament was passed, to disable the faid Alexander Wilson from holding or enjoying any office of magistracy in Edinburgh, or Great Britain; a new provost was injoined to be chosen, and a fine of 2000 l. levied on the city of Edinburgh for the use of the widow of captain Porteous, as punishments for their respective remissnesses in not endeavouring to prevent this infult on fovereignty, and all lawful authority.

This act, however, passed not without great debates; and as some thought it impossible to preventa defign fo well concerted, and fo fuddenly and boldy executed, they were of opinion, that the city of Edin-

burgh was treated with too much feverity.

This act was passed in the 10th year of his majesty, and in the same year was also passed another, for the more effectually bringing to justice any persons concerned

for the

cerned in this strange attempt; in which fugitives not surrendering were made liable to death; the concealing of those who should be declared sugitives was also made death. This act was to be read before morning sermon in every church in Scotland, every Sunday for a year: impeachers were to be encouraged, and discharged; informers rewarded with 2001. Sterling for every person they should convict, and be admitted witnesses.

But so secretly was this dark affair managed, that I do not remember any body suffering on the account; and the reading of the act was but indiffer-

ently digefied by many in that kingdom.

Great severity was intended; such as the imprisoning, as well as disqualifying the lord provost for a year; the abolishing the town-guard of the city of Edinburgh, and the taking away the gates of the Netherbow Port, and keeping open the same. But the city of Edinburgh was happily saved from this disgrace. They have now taken down this gate, as observed already, of their own accord.

The churches in this populous city and fuburbs are 12, including the chapel of the castle; the ministers about 20; besides three chapels.

The 12 churches are:

1. The Canon-gate Kirk.

2. The Collegiate, or College Kirk.
3. The Trone Kirk, or Christ's Kirk.

4. The New Kirk. 5. The Old Kirk.

All these are parts of the cathedral of St. Giles's.

6. The Tolbooth Kirk.
7. Haddo's Hole Kirk.

8. The lady Yester's Kirk.
9. 10. The Grey-friars Kirk, now divided into two.

11. The West Kirk, or St. Cuthbert's.

12. The chapel of the castle.

There

There are also about 20 meeting-houses of the episcopal party; for though presbytery be the established religion of Scotland since the Revolution, yet a great number of the people of all ranks are not of that profession, especially in the northern parts.

There are also three meeting-houses of Seceders; and the Methodists have built a neat chapel in the or-

phan-hospital park.

The churches are always very full; for the people in this country do not wander about on the fabbath-days, as in England. They have also one very good custom as to their behaviour in church, which I wish was practised in England: if any person comes in after divine service is begun, he takes no notice of any body, nor any body of him; whereas the English make bows and cringes, even in the middle of prayers. Not that the Scots want manners; for they shew them more properly after the sermon is done, and the blessing given, when they all look round upon their friends, especially to persons of distinction, and make their civilities as courteously as their southern neighbours.

The castle only, and the palace, remain to be mentioned. The first is strong both by situation and art, but far from being impregnable, as has been experienced more than once. It was formerly called the Maiden Castle, because the PiElish kings kept their daughters in it. Still more anciently it was called Alatum Castrum, or the Winged Castle, perhaps from its form, and standing on so high an hill, as it were in the air. It is fituated at the west-end of the city, where the rock rifes to an high and large fummit. It is inaccessible on the fouth, west, and north. entrance is from the town, where the rock is also very high; and is defended by a round battery, and an out work at the foot of it, with a draw-bridge. In the upper part of the castle is a guard-house, and the fortres

fortress is defended, in different parts, by several batteries of heavy cannon, numbers of which are of brass. In the castle is a royal palace of hewn stone, where are kept the regalia and chief records of state, as alfo the magazine for the arms and ammunition of the

public: it is bomb-proof.

The

A chapel is also in it for the use of the garrison; and it is furnished with water by two wells in the rock. From the castle is a delightful prospect over the city and neighbouring country, and to the river of Forth, from whence it is faluted by fuch men of war as come to anchor in Leith road. The governor is always a person of quality, and general of the forces.

The governor, lieutenant-governor, fort-major, and fome other officers, have very good apartments; and there are deep vaults in the rock, which, they fay,

are bomb proof.

The palace, called Holy-rood-house, is a very handfome building. It may be called the escurial of Scotland, being both a royal palace, and an abbey, founded by king David I. for canons regular of St. Austin, who named it Holy-rood-house. The entrance is adorned with pillars of hewn stone, under a cupola in the form of an imperial crown, balustrated on each fide. The fore-part has two wings, on each of which are two turrets; that towards the north was built by king James V. and that towards the fouth (as well as the rest) by king Charles II. whereof Sir William Bruce was architect. The inner court is very stately, all of free-stone well hewed, with piazzas round it, from which are entries into the several apartments, truly royal and magnificent; but, above all, the long-gallery (147 feet in length) is very remarkable, being adorned with the pictures of all the Scots kings from Fergus I. to James VII. inclusive, by masterly hands. Those kings who were eminent, and all the race of Stuarts, Stuarts, are in full length; the others are but half lengths. In the time of the rebellion (1745) this gallery was used as a barrack for a regiment of soldiers; who have cut and damaged many of the pic-

tures, in a shameful manner.

You turn to the right to the royal apartments, as at St. Fames's; and the stair-case and guard-room run exactly as there, but sar more losty and magnissent. Duke Hamilton's apartment (as hereditary keeper) is in the double tower to the north; and the great council-chamber in the tower to the south. The earl of Perth, when chancellor, in the late king James's reign, converted this noble room into a popish chapel, and his apartments behind it was the jesuits school, which, being demolished by the mob at the Revolution, has been neglected ever since. The chimney-pieces are all of marble, and the apartments two pair of stairs, for the officers of state, are very well kept, being lent to several of the nobility, who now live in them.

Behind this palace, the conventual church makes a wing to the north; and eastward from it is St. Ana's-yard, which was designed to be branched out into gravel-walks, adorned with statues; but the Revolution coming on, attended with a long and expensive war, and afterwards the Union with England, pre-

vented its being put in execution.

The church (lately repaired at the instance of the earl of Dundonald) was very high to the roof, and the pillars as exquisite as those of St. George's chapel at Windsor. It was an ancient, very reverend, but declining fabric, and used only as a burial-place for persons of quality. In it king James VI. was crowned by bishop Hepburn, assisted by John Knox, as was king Charles I. by archbishop Spot/wood.

The walls and roof of this fine chapel, on Decem-2, 1768, gave way and fell down; and in the night roof

of

King James VII. began to erect a magnificent throne here for the sovereign, and 12 stalls for the 12 knights companions of the most noble and ancient order of St. Anarew, or the thistle, which he had revived after a long disuse. The finest carvers and masters in Europe were employed in it. But at the Revolution the rabble demolished all, and ransacked every corner, fell upon a vault quite filled up, so as not to be known what it certainly were, in which were sound the bodies of king James V. and Magdalene of Valois, his sist queen, together with lord Darnley's, all embalmed.

The adjoining park is about four miles in circumference; but, which is very odd, there is neither deer nor tree in it, though it affords good pasture for cattle. There is a very high and craggy rock in it, near half a mile to the top, called Arthur's Seat, from Athur the British king, who, they say, used to view

the adjacent country from thence.

The glory of this neighbourhood is the new house of the earl of Abercorn, built all of fine stone; and is by far the handsomest mansion in Scotland: the architect was Mr. Chambers, and the builder Mr. May.

This palace, or abbey, and park, is a fanctuary for debtors; and no one, but by a special warrant from the Lords of Session (which there are sew examples of their granting), can arrest any man, who has entered his name in an office kept there for that purpose.

It would be unpardonable in us to quit the city of Edinburgh, without taking notice of a fingular circumstance mentioned by Dr. Johnson in his Journey to

the

the Western Islands of Scotland: "There is one subject of philosophical curiosity to be found in Edinburgh, (says the doctor) which no other city has to shew: a college of the deaf and dumb, who are taught to speak, to read, to write, and to practise arithmetic, by a gentleman whose name is Braidwood. The number which attends him is, I think, about twelve, which he brings together into a little school, and instructs according to their several degrees of proficiency.

" I do not mean to mention the instruction of the deaf as new. Having been first practised upon the fon of a constable of Spain, it was afterwards cultivated with much emulation in England, by Wallis and Holder, and was lately professed by Mr. Baker, who once flattered me with the hopes of feeing his method published. How far any former teachers have succeeded, it is not easy to know; the improvement of Mr. Braidwood's pupils is wonderful. They not only speak, write, and understand what is written, but if he that speaks looks towards them, and modifies his organs by distinct and full utterance, they know h well what is spoken, that it is an expression scarcely figurative to fay, they hear with the eye. That any have attained the power mentioned by Burnet, of feeling founds, by laying a hand on the speaker's mouth, I know not; but I have feen fo much, that I can believe more: a fingle word, or a short sentence, I think, may possibly be so distinguished.

"It will readily be supposed by those who consider this subject, that Mr. Braidwood's scholars spell accurately. Orthography is vitiated among such a learn first to speak, and then to write, by impersed notions of the relation between letters and vocal utterance; but to those students every character is dequal importance; for letters are to them not symbols of names, but of things; when they write, they do

not represent a found, but delineate a form.

48 This

Rossin, or Rossand, six miles from Edinburgh, for ancient chapel of exquisite workmanship, entirely ched over with a stone roof. It is the only thing of a kind that escaped the sury of the first resormers. is a Gothic building on the outside, each buttress wing been adorned with statues as big as the life, in e niches, and of each side of the windows, which e very spacious. This chapel lies in Mid-Lothian, ur miles from Edinburgh. The soundation was laid 1440, by William St. Clair, Prince of Orkney, duke Holdenbourg, &c. It it remarkable in all this work at there are not two cuts of one sort. The most Vol. IV.

curious part of this building is the vault of the choir. and that which is called the Princes's, or rather Prentice's Pillar. This celebrated pillar is of a different construction from any of the rest, being of a spiral form, and adorned with very elegant carved work. From the fouth-east corner of the chapel (not far from this pillar) you descend, by a flight of steps, into very spacious light vault, arched over with a strong stone roof; in which there are now no cossins remaining. This chapel was possessed by a provost and feven canons regular, who were endowed with feveral confiderable revenues, through the liberality of the lords of Rollin.

Roslin, or Rosland, has (besides the chapel) large remains of a strong ancient castle, built upon a rock overlooking a deep valley. The fituation of this place is very romantic and picturefque, and remarkable for a number of hanging gardens, on the fides of hills which produce (in particular) vast quantities of fine strawberries. Here is a commodious inn for the accommodation of those who visit the place, as a great many do in the fummer feafon, it being a pleafant

ride from Edinburgh.

This place is remarkable, according to Buchanan Lesley, and other Scotch historians, for three victoria obtained over the English in one day, in the neigh bourhood, by John Carminy, governor of the king dom, and John, as others fay, Simon Fraser, will 8000 men, over three bodies of the English, confishing overn of 10,000 each, the latter end of February 1302.

We next visited Leith, the sea-port of Edinburgh which is a large and populous town, or rather tw towns; for the river or harbour parts them: but the are joined by an ordinary stone bridge of three small arches, to which ships of burden may come, and, high water, lay their fides close to the shore. Hen

Here is a very fine quay, well wharfed up with flone, and fenced with piles, able to discharge much more business than the place can supply, though the trade is far from being inconsiderable. At the mouth of the harbour is a very long and well-built pier, or head, which runs out beyond the land a great way. and defends the entrance into the harbour from being filled up with fand, as it would otherwise be, when the wind blows hard at north-east. There is also a strong stone pier now built, on the other side of the harbour, both of which are kept in good repair; and, by this means, the harbour is preferved, and kept open, in spite of a flat shore, and a large swell of the

On the other fide of the bridge are the remains of a strong castle, built by Oliver Cromwell, to command the port, but is now almost an heap of rubbish. Here the rebel Highlanders, in 1715, made a bold stop. and took possession of it for one night; but not find-. ing their friends in the city in any condition to join them, and the troops preparing to attack them, they quitted it in the night, and marched off to the earl of Vinton's house.

This town was once very strong; for the French eld it for some years against the reformers, but were t last driven out by an army which queen Elizabeth ent from England to affift the Protestants. It is under he jurisdiction of the magistrates of Edinburgh, and is overned by a bailiff under them.

At Leith the Forth is feven miles over, and holds ther two title beyond Cramond; and at Queen's-ferry is reduced but the p three miles in breadth. hat breadth for five or fix miles; but it is narrower a

ree small Near Cramond bridge is Craigie Hall, the seat of the and, to on. Charles Hope Weir, Esq. brother to the earl of Near Cramond bridge is Craigie Hall, the feat of the Topton. This is one of the most beautiful places in e neighbourhood of Edinburgh, ornamented with

F 2 walks walks and plantations on the banks of the river; over which is thrown a bridge of one large arch, built of rough stones, above which the river forms one of the sinest cascades imaginable, by running betwixt, and over, a vast number of rocks, whereof the bed of the river, in that part, entirely consists. I his bridge very properly bears the motto utile duki. After passing it you rise a gentle hill, on the top of which is a temple, from whence you have a fine view of the house, park, and adjacent country, which is really very fine.

Queen's ferry is a small sishing town situated close by the Forth shore, supposed to be so called from St. Margaret, queen to king Malcolm Canmore, who used to ferry over here as the shortest passage to Dunfermling, where she resided much, and laid the soundation

of a monastery.

In the middle of the Forth, just opposite to this village, is a small island. with the remains of an ancient castle upon it. Here is a fine flat corn country along the southern banks of the Forth; but on the other side, to wit, Fischire, we see a vast ridge of mountains.

After leaving Leith, we have a beautiful prospected the city and castle of Edinburgh on our lest, in which the whole city appears not unlike an huge castle, by

reason of the height of its houses.

At Cramond, just mentioned, and in the lands of Inglessown, as well as at other places in this country, Roman antiquities have been sound: particularly near the former place were dug up two stones, late in Sir Robert Sibbald's yard at Edinburgh, upon one of which is a laurel crown, and on the other a Roman securities they are supposed to have been part of a pillar erected in Domitian's time, when Agricola was in these parts. Near this place, in the beginning of December 1740 a whale between 50 and 60 feet in length, and 16 is depth, was cast on shore; whose mate afterwards tumbling

tumbling about above the ferry, was heard to make an hideous moan, as supposed, for its loss.

Between Edinburgh and this town the country is thronged with the feats of noblemen and gentlemen; among which, Hipe of Cragie-hall has a very pretty one, with a fine garden inclosed with a brick wall, a thing hardly to be feen any where elfe in Scotland; the want of which is the reason why the wall-fruit does not thrive to well as it would otherwise do; for stone does not hold the warmth of the fun, after it is gone, as bricks do.

But the great beauty of this part of the country is Hopton-house, built upon a delightful plain, on the bank of the river. It was originally a square; but there are two wings lately joined to it, which add greatly to the beauty of the building. The fituation is so extremely good, and gives so elegant a prospect as well to the fea as to the land, that nothing can be finer It is exquifitely finished both within and without; and there are some pieces of curious paintings in it, besides a great number of family pictures.

From hence the Forth widens again, and foon after is three or four miles wide, and makes a fafe and deep road, with good anchor-ground, where, if there were a trade to answer it, a thousand sail of ships of any

burthen might fafely ride.

On the fouth fliore, upon a narrow point of land running into the water, stands Blackness castle, wherein state-prisoners were confined in former times. especially such as were taken up for religious differences; many of whom miserably perished here, either by the unhealthiness of the place, want of conveniencies, or fomething worfe. This caftle might be of use, if the harbour were more frequented; but as it is not much so, there seems to be no occasion for it at present.

Farther west is Burrowssounness, a long town, confisting only of one straggling street, which is extended along the shore, close to the water. It has been a town of the greatest trade to Holland and France of any in Scotland, except Leith; but it suffered very much of late by the Dutch trade being carried on so much by the way of England.

LETTER III.

Containing a DESCRIPTION of the following Shires and Towns, viz. Annan, Dumfries, Galloway, Air, Renfrew, Glasgow, Stirling, Linlithgow, Clidsdale, Tweedale, Roxborough, &c.

S I entered the east side of Scotland at Berwick upon Tweed, and have carried on my account through the Lothians, so, having travelled over the west part at another journey, when I went from England by a different road, I shall here give the particulars of that.

Passing the river Esk, or (as it is commonly called) the Solway firth, beyond Carlisse, we entered Scotland on the side of Dumfriesshire. The division of this county into Eskdale, Nithsdale, and Annandale, is but the ordinary marking out the rivers Esk, Annan, and Nith; for the whole province makes but one shire, viz. that of Dumfries.

The first place of note we came to in Scotland was Annan, the chief town of Annandale, which, being a sea-port, and having a good harbour, was once a town of pretty good trade; but it was often taken by

0

the English, who, at last, burnt it to the ground in the reign of king Edward VI. from which it never recovered. This place has trade in wines; the annual exports are between twenty and thirty thousand Winchester bushels of corn.

The town and cattle of Luchmahen is a royal burgh, as well as Annan. Three parts of it are furrounded by lakes, which afford excellent fish; and one particularly, which is found no where else. The castle,

as well as that of Annan, is now demolished.

Moffat, a small town on the river Annan, is remarkable for its medicinal springs, as I before mentioned.

The town of Rivel deserves to be mentioned, on account of a very good salt made out of a particular

fand there, which they gather up and boil.

From Annan, keeping the sea as close as we could to the lest, we went on due west to Dumfries, a seaport town at the mouth of the river Nid, or Nith, which gives name to the third division of the county, called Nithsdale; but this town is the capital of the whole shire, and indeed of all the south-west part of Scotland.

Dumfries was always a good town, with large freets, and full of reputable and wealthy merchants, who trade into foreign parts, and employ a confiderable number of ships, especially since they have embarked in trade to England, and the English plantations. This town is also advantageously situated for an increase of commerce on the river Nid, or Nith; for, though it stands near two leagues from the sea, yet the tide slows up to the town, and ships of burden come close up to the quay; and, about four miles below it, the largest merchant-ships in Britain may ride in safety.

Over the river Nith is a very fine stone bridge, at this place, with nine arches, and so broad, that two F 4 coaches

coaches may go a-breast on it. Here they have also an exchange for the merchants, an handsome church, a tolbooth or prison, and a town-hall for the use of

the magistrates.

They were once possessed of a large share of the tobacco trade, but at present they have scarcely any commerce. The great weekly markets for black cattle are of much advantage to the place; and vast droves from Galloway and the shire of Air, pass through in their way to the fairs in Norfolk and Suffolk.

The castle in this town is very old; yet is still pretty good and strong. This castle, as well as that at Carlavrock, near the mouth of the river, which has been a very magnificent structure, belonged formerly to the ancient samily of the Maxwells, earls of Nithfale; the only remaining part of which, being unhappily embarked in the rebellion of 1715, and taken in arms at Presson in Lancashire, made his escape out

of the Tower, and never was retaken.

Dumfries was continually subject to the inroads of the English, and was frequently ruined by them. To prevent their invasions, a great ditch and mound, called Warders Dikes, were formed from the Nith to Lochermoss, where watch and ward were constantly kept; and when an enemy appeared, the cry was a loreburn, a loreburn. The meaning is no farther known, than that it was a word of alarm for the inhabitants to take to their arms; and the word, as a momento of vigilance, is inscribed on a ring of silver round the ebony staff, given into the hands of the provost as a badge of office on the day of annual election.

On most of the eminences of these parts, beacons were likewise established for alarming the country on any irruption of their southern neighbours; and the inhabitants able to bear arms were bound, on the siring of these signals, to appear instantly to the warden

of the

of the marches, and not to depart till the enemy was driven out the country; and this under pain of high treason.

There are many confiderable woods in this country, the chief of which is Holy-wood, where was an abbey, which gave furname to the famous aftrologer Johannes de Sacro Bosco, or Holy wood Drumlonig also, the noble palace of Queensberry, is remarkable for its wood of oak fix miles long.

At this time the river Nith parts the stewartry of Galloway, and the shire of Dumfries; and in the middle of the bridge over it is a gate, which is the limit between them This neighbourhood of Galloway, which is a great and rich province, promotes the trade

of this place very much.

arden of

We could not pass Dumfries, without going out of our way to see the castle of Drumlanrig, the sine palace of the duke of Queensberry, just mentioned, which stands at twelve miles distance upon the same river. The vale on each side is pleasant, and tolerably good; but when these rapid rivers overslow their banks, they do not, like Nile, or even like the Thames, and other southern streams, fatten and enrich the soil; but, on the contrary, they lodge so much sand and splinters of some upon the surface of the earth, and among the mots of the grass, that it spoils and beggars it; nay, he water is sometimes hurried on with such force, that it washes the best part of the earth away, where he soil is light.

Drumlanrig is like a fine picture in a dirty grotto, ran equestrian statue set up in a barn. It is envioued with mountains, which have the wildest and nost hideous aspect of any in all the south part of

cotland.

We were not so much surprised with the height of ne mountains, and the barrenness of the country beand them, as with the manners of the people, who

F 5

are not so polished here, as in other parts of Scotland. But what was most wonderful, was, to see so glorious a palace, with such fine gardens, and every thing about it so truly magnificent, standing in a wild and mountainous country, where nothing but what was desolate and dismal could be expected. However, the situation like that of Chatsworth in Derbyshire, is certainly a soil to the buildings, and sets them off with greater advantage.

If you come to the palace by the road, which leads to it from Edinburgh, you pass the river Nith, which is there both broad and deep, over a stone bridge, erected by the noble founder of the castle, and builder

of the house, the first duke of Queensberry.

The building is four-square, with roundels on the sinner angles of the court, in every one of which is a stair-case, and a kind of tower on the top. It stands on the summit of a rising ground, which is beautifully laid out in slopes and terraces. At the extent of the gardens are pavilions and banqueting-houses, exactly answering to one another; and the greens, espaliers,

and hedges are in great perfection.

The apartments are fine, and richly furnished. The gallery is filled, from one end to the other, with family pictures of the duke's ancestors, most of them at full length, and in their robes of state, or of office. William, the first of the family, was a younger son of James earl of Douglas, who got the barony of Drumlanrig by a deed from his father, as his portion in the time of king Robert III. He was asterwards sent embassador to England, to ransom king James I. who was detained there. In the year 1708, the late duke of Queensberry was created duke of Dover, as also marquis of Beverley, and baron of Ripon in England.

The next trip we made was to Galloway, fo called from the Gauls, from whom the ancient inhabitant descended. It is divided into two different diffricts:

of Nith here graz land you it, while frequence

d.

that towards the west is called the shire of Wigton, and the other towards the east is called the stewartry of Kirkcudbright, of which the Maxwells, earls of Nithssale, were heretable stewards. The country hereabouts seems one continued heath, proper for grazing small cattle, which are generally sold in England; and wherever you perceive a grove of trees, you may depend upon it, there is a laird's house near it, which are mostly old towers of slone, strongly built, to prevent a surprize from inroads, which were frequent between the two nations before the death of queen Elizabeth.

The first town of note on the coast is Kirkcudbright. Though its fituation is extremely convenient for carrying on a very advantageous commerce, we faw nothing but an harbour without ships, a port without trade, and a fishery without nets. This is owing partly to the poverty, and partly to the disposition of the inhabitants, who are indeed a fober, grave, religious fort of people, but have no notion of acquiring wealth by trade; for they strictly obey the scriptures in the very letter of the text, by " being content with fuch things as they have." The river Dee, which enters the fea here, and forms the harbour, comes out of the mountains near Carrick, and is full of turnings and meanders, that, though it is not above 70 miles in a line, it runs near 200 miles in its courfe.

The county of Galloway lies due west from Dumfries; and as that part of it they call the Upper Galloway runs out farther into the Irish seas than the rest, all that bay on the south-side may be reckoned part of Solway Firth, as all on the north-side is called the Firth of Clyde, though near 50 miles from the river tels.

The western Galloway, or the shire of Wigton, runs out with a peninsula so far into the sea, that, from the F 6 utmost

utmost shores, you see the coast of Ireland, as plain as

you fee Calais from Dover.

Port Patrick, which is the ordinary place for the ferry or passage to Belfast, and other ports in Ireland, has a tolerable good harbour, and a safe road; but there is very little use for it at present; the packet-boat, and a few sishing-vessels, when I was there, were the sum of its navigation.

Upon an hill near the town we plainly faw Ireland to the fouth-west, the coast of Cumberland, and the Isle of Man, to the south-east, and the Isle of Ila, and

the Mull of Kintyre, to the north-west.

As we passed into the peninsula, we stopped at Stranrower, fituate on the north-fide of the ifthmus, which is formed by two arms of the fea; one on the northfide, called Loch-Rian; and the other on the fouth called the bay of Glenluce. Upon the former of these bays, (for fuch they both are) stands this town. It is a royal burgh, which has a most convenient position, in respect to the great body of water it commands, and to the country lying round on every fide; so that from the latter it derives a reasonable share of domestic trade, and some foreign commerce, as also a small intercourse with our North American colonies from the former. Part Patrick, standing a little diftance to the west, immediately on the sea, is a member of this, with eight creeks belonging to it; and exclusive of these, there are two, which immediately depend on Stranrawer, with a cuftom-house, and a proper establishment, and some officers also for the receipt of the revenue arifing from falt. The peninfula before described, on which are Port Patrick and all its creeks, may be from its northern horn, which is called Fairland-Point, to the Mull of Galloway, in its fouthern extremity, about 30 English miles in length, and from three to fix in breadth, containing in the whole go square miles at least. In the old language

of and bein ficie in the were raw tion, and render and the duce, lutary fite to once

of the natives, it was called the Rinnes of Galloway; and though no way extraordinary in respect to soil, being hilly rather than mountainous, yet it is not deficient in grain, abounds in grass, and consequently in theep and black cattle. But if any manufactures were introduced here, as there is room for many, and raw materials for feveral, the excellence of its firmation, (which is alike favourable for fishing, coasting, and foreign commerce) would quickly appear, and render this district, which is equal in fize to Jerfey and Guernsey, not inferior to them in cultivation, produce, or number of people; to accomplish which falutary change, there are no other instruments requifite than industry and perseverance; for were these once perfect, experience and emulation would quickly effect the rest.

Six miles fouth of Wigton lies Whithern, the ancient Candida Casa, a royal burgh, but very poor, especially

fince the dissolution of the priory.

But though the people of Galloway, especially on the sea-coast, are much to blame for not falling into commerce, navigation, &c. yet they are not quite idle; for they are great cultivators of the earth, and breeders of cattle, of which they send above 50,000 head every year to England. Besides, they have the best breed of strong, low, punch horses in Britain, if not in Europe, which are from thence called Galloways. These horses, which are very much bought up in England, are remarkable for being good natural pacers, strong, easy goers, hardy, gentle, well-broken, and, above all, not apt to tire.

Proceeding from Lower Galloway hither, we had like to have been driven down the stream of a river, though a countryman went before for our guide; for the water swelled upon us as we passed, and the stream was very strong, so that we were obliged to turn our horses heads to the current; and sloping over, edged

near

near the shore by degrees; whereas, if our horses had stood directly cross the stream, they could not have kept their seet. The inhabitants follow sishing, as well in the sea, as in the rivers and loughs, which lie every where under the hills; in which, about September, they catch an incredible number of excellent eels; by which they are no less gainers, than by their little horses.

This part of the country is very mountainous, and fome of the hills prodigiously high; but they were all covered with sheep, and other cattle, the gentlemen hereabouts being the greatest sheep-masters (for so they call themselves), and the greatest breeders of

black cattle and horses in Scotland.

We now entered the shire of Air, sull north from the Mull, or north-point of Galloway: and as we before coasted the south bay, or Firth of Solway, which parts England from Scotland, so now we coasted the Firth of Clyde, which, for near 60 miles, lies on the west-side of the shore, standing away north-east from the point of the Mull. This shire is divided into three great bailleries; viz. Carrick, Kyle, and Cun-

ningbam.

Carrick is a more fruitful and better cultivated country than Galloway, and not so mountainous; but it does not so much abound in cattle, especially sheep and horses. Though there is no considerable port in this part of the country, yet the people begin to trade here; and those who live towards the coast are great sistenen, and are employed by the merchants of Glasgow, and other places, to catch herrings for them. May-hole is the chief town; but though it stands on the coast, it has no harbour, and is poor and decayed. The market is pretty good, because there are many gentlemen in the neighbourhood, and the coast near it

Coming to the north bounds of Carrick, we passed the river Dun, over a bridge of one arch, consisting of 90 feet; which is much larger than the Rialto at Venice, or the middle arch of the great bridge at York. We found many large ones in this country, though I think, none so large as this, except at Glasgow and Stirling. This bridge led us into the country of Kyle, the second division of the shire of Air. Here I observed, that, contrary to our expectation, we found, the farther North we travelled, the country was the siner, better, and richer.

Kyle is more populous than Carrick; and the foil being better here, and the country more plain and level, on the banks of the river are abundance of gentlemen's feats, though most of them are built castle-wise, because of enemies; but that fear being now over, they begin to plant and inclose after the manner of England.

Over the river Air is a bridge of four arches, near the New Town; and fouth of the bridge stands the old town of Air or Erigena, famous for its antiquity and privileges. It has a very large jurisdiction of near 64 miles, reaching from the mouth of Clyde to the borders of Galloway. It stands on a fandy plain, but has pleafant green fields two miles fouth and north of it. In the fields betwixt the mouth of the river Dun and Air, stands a very beautiful church. The town has a very good harbour in the river, and lies conveniently for trade; and it is easy to see, that it has been much larger than it is at present. It is now like an old beauty, and shews the ruins of a good face, but is still decaying every day; and from having been the fifth best town in Scotland, as the townsmen say, it is now the fifth worst; which is owing to the decay of its trade: so true it is, that commerce is the life of cities, of nations, and even of kingdoms. What

was the reason of the decay of trade in this place, is not easy to determine, the people themselves being either unwilling or unable to tell. Here, over the river Irwin, which divides Air from Cunningham, is a good bridge of sour arches. Air is noted for the treacherous murder of many noblemen and gentlemen by the English in Wallace's time; when they were called together during a truce, (after Edward I. had over-run the country), on pretence of holding a court of justice; and were treacherously hanged one after another, as they entered the king's large barns, where the court was held.

This was as feverely, as justly, revenged by Wallace, with whom, as warden of Scotland, they had made the truce, and whom they endeavoured to entice thither by their charter of peace, as they had done a great many others of quality. But he, having notice of what had passed, surprised them that very night in their jollity, rejoicing that they had, as they thought, by these treacherous murders, secured Scotland for ever; and having set guards round the barns, that none should escape, he burnt all the English in them. The ruins of those barns are still shown here.

Oliver Cromwell built a citidel at Air, well fortified with a fosse, and a stone wall. At the Restoration it was demolished; and at present only some houses, and

angles of the ramparts, are standing.

From Air, keeping still North, we came to Irvin, upon a river of the same name. Here they have a port, which formerly was in much better condition than it has been for some years past, the harbour being so much decayed by length of time, and other accidents, that the trade of the town began to decay; for the water not being confined to its proper channel, the harbour became so choaked up with sand-banks, that it was of little use to what it had been; so that ships of very small burden were frequently shut up for several

feveral months in the river before they could fail out to sea. Their chief trade, now their harbour is cleared, is in Scots coal, which they export in great quantities to Ireland; for the neighbouring hills abound with this commodity. Irvin is the capital of that division of the shire of Air, which they call Cunningham; and is really within the Firth of Clyde, though not actually within the river itself. The name of Cunningham signifies the king's habitation, from the beauty of its situation.

Here are two handsome streets, a good quay, and a capacious harbour. The country is rich and fruitful, filled with gentlemen's seats, and well-built houses; and wherever you turn your eye, you see nothing but beautiful inclosures, pleasant pastures, and grassgrounds, so that we thought ourselves in England

again.

A little from Irvin stood Kilmarnock castle, the seat of the samily of the Boyds, late earls of Kilmarnock, which, on the 15th of March 1739, was entirely confumed, with the furniture, and a curious collection of books and MSS. nothing being saved but the charterchest. On the other side is the castle of Eglington, the seat of the ancient samily of the Montgomeries, earls of Eglington. On the north-east borders of this country, where it joins to Clydsdale, is the castle of Loudon, the noble and beautiful seat of the earl of Loudon.

Upon the bay of Clyde stands the town of Largis, famous for the defeat of the Norwegians by king Alex-

ander III. of Scotland.

Kilmaers, in the same county, is the seat of the noble and ancient samily of Cunningham, earls of Glencairn.

In the fea lies Lady Ife, where is great plenty of

rabbits and fowl, but no inhabitants.

With the division of Cunningham I quitted the shire of Air, which is, without exception, one of the plealantest counties in Scotland.

Joining

SCOTLAND.

Joining to it North, and bordering on the Clyde itself. lies the barony of Renfrew, which was the ancient paternal estate of the Stuarts, before they succeeded to the crown of Scotland; and his royal highness the prince of Wales, among other titles, is styled baron of Renfrew. It is a pleafant, rich, and populous country: and though the foil is not thought to be fo good as in Cunningham, yet that is abundantly recompenfed by the neighbourhood of Glafgow and the Clyde, and the great commerce of both.

The ancient channel of the Clyde, into which the tide flows, furnishes it with a very convenient harbour, called Puddock; and, by spring-tides, vessels of tolerable burden are brought np to the bridge. The inhabitants addict themselves pretty much to the Irih trade; and having the benefit of a public ferry, draw no small advantage from being the centre of correlpondence between the counties on both fides of the

We kept our route from Irvin along the coast, at near as we could; fo that we faw all the Firth of the Clyde, and the very opening itself, which is just at the west-corner of this county. There are some villages and fishing towns within the mouth of this river, which have good business.

The first town of note is called Greenock, which feems not to be an ancient place, but to be grown up ion wi in later years, by being a good road for ships to ride Clyde ab in, that come into and go out of Glasgow, as ships for London do in the Downs. The town is well built, and the has many rich trading families in it, and a caftle to by a pri command the road. It is the chief place in the west of who, w Scotland for the herring-fishing; and the merchants of wist-mi Glasgow, who are concerned in it, employ their vell and, an fels for catching and curing the fish, and for carrying samily, them abroad to market afterwards; and their being ready on all hands to go to sea, makes them often where it leave

Pailley is a confiderable but irregularly built town. at the distance of fix miles from Glasgow. It was erected into a burgh of barony in the year 1488, and the affairs of the community are managed by three baillies, (of which the eldest is commonly in the commission of the peace), a treasurer, a town-clerk, and seventeen counsellors, who are annually elected upon the first Monday after Michaelmas. It stands on both sides the river Cart, over which it has three slone bridges, each of two arches. The river runs from fouth to north, and empties itself into the Clyde, about three miles below the town. At spring-tides, vessels of forty tons burthen come up to the quay; and, as of lorty tons burthen come up to the quay; and, as the magistrates are now clearing and deepening the river, it is hoped still larger may be hereaster get up. The communication by water is of great importance it is to the inhabitants, for sending their goods and manuriver, actures to Port-Glasgow and Greenock, and, if they thuse it, to Glasgow. Besides, when the grand canal thuse it, to Glasgow. Besides, when the grand canal

which hall be finished, they will have an easy communication with the Firth of Forth, as the canal joins the coride Clyde about three or four miles north of Paisley.

About fifty years ago, the making of white stitching thread was first introduced into the west country by a private gentlewoman, Mrs. Millar of Bargarran, who, very much to her own honour, imported a wist-mill, and other necessary apparatus, from Holary wist, and carried on a small manufacture in her own arrying mily. This branch, now of such general importance to Scotland, was soon after established in Paisley, where it has ever since been on the encrease, and has least

now diffused itself over all parts of the kingdom. In other places, girls are bred to it: here they may be rather said to be born to it, as almost every family makes some threads, or have made formerly. It is generally computed, that, in the town and neighbourhood, white threads are annually made to the amount of from 40 to 50,000 s.

They likewife carry on manufactures of lawn to a great amount. Vast quantities of foreign yarn are annually imported from France, Germany, &c and it is thought, that the lawn branch here amounts to about 70,0001. annually. They have likewise a manufactory of silk gauze, of ribbons, besides several others

of a more local kind,

So late as the year 1746, by a very accurate survey, this town was found to contain scarce 4000 inhabitants; but it is now thought not to have less than

from 10 to 12,000, all ages included.

The earl of Abercon's burial-place is by much the greatest curiosity in Paisley. It is an old Gothic chapel, without pulpit or pew, or any ornament whatever; but it has the finest echo perhaps in the world. When the end-door, the only one it has, is shut, the noise is equal to a loud and not very distant clap of thunder: if you strike a single stroke of music, you hear the sound gradually ascending, till it dies away, as if at an immense distance, and all the while dissusing itself through the circumambient air. If a good voice sings, or a musical instrument is well played upon, the effect is inexpressibly agreeable.

The country between Paisley and Glasgow, on the bank of Ciyde, I take to be one of the most agreeable places in Scotland, for its situation, fertility, healthiness, and for the benefits it receives from the neigh-

bourhood of Glafgow, and the fea.

The great church of Glasgow, and that noble street of Paisley, are about 600 years old, and are authentic

days ness, any this ing must was

rook

proofs of the power and riches of the church in those days, which was able, in times of poverty and rudeness, to erect a variety of noble piles, the expence of any one of which would fensibly distress the whole of this part of the united kingdom, in its now flourishing state, to finish. However, the present editors must observe, that St. Mungo's church at Glosgow, was not built at the expence of the Scotch only; but, according to the custom of the times, the building was carried on by the assistance of good Christians, all over Europe. This was the case even in England, where many public sabrics were reared in the same manner: and they believe it will be sound, that the samous minster of York was several hundred years in building.

I am now come to the bank of Clyde; but my method here, as in England, forbids my wandering North, till I have taken a full view of the South. The Cyde and the Forth may be faid to cross Scotland here, their two Firths not being above 20 miles distant from one another, which, when joined, will divide it very

near in the centre.

If a

Glasgow is the emporium of the west of Scatland, being, for its commerce and riches, the second in this northern part of Great Britain. It is a large, stately, and well-built city, standing on a plain, in a manner four-square; and the sour principal streets are the fairest for breadth, and the finest built, that I have ever seen in one city together. The houses are all of stone, and generally uniform in height, as well as in front. The lower stories, for the most part, stand on vast square Doric columns, with the arches, which open into the shops, adding to the strength, as well as the beauty, of the building. In a word, it is one of the cleanliest, most beautiful, and best-built cities in Great Britain.

It

It stands on the side of an hill, sloping to the river; only that part next the river, for near one-third of the city, is slat, and by this means exposed to the water, upon any extraordinary flood: it is situated upon the east bank of the Clyde, which is not navigable to the town but by small vessels. Its port therefore is Newport Glassow, which stands near the Clyde's mouth, and is an harbour for ships of the greatest burden. Here it is on a good wharf or quay the merchants load and unload. Their custom-house is also here, and their ships are here repaired, laid up, and sitted out, either here or at Greenock, where work is well done, and labour cheap.

The old bridge over the Clyde confifts of eight arches, and was built by William Rea, bishop of this see, about 400 years ago. A new one has been lately added, of seven arches, with circular holes between each to carry off the supersluous waters in the great floods. The bridge deviates from the original plan, which was very elegant, and free from certain defects

that difgrace the prefent.

Where the four principal streets meet, the crossing makes a very spacious market-place, as may be easily imagined, since the streets are so large. In the centre stands the cross. The houses in these streets are all built upon one model, with piazzas under them, faced with Ashler stone, and well sashed. As we come down the hill from the North-gate to this place, the Tolbooth and Guild-hall make the north-west angle, or right-hand corner of the street, which is now rebuilt in a very magnificent manner. It is a noble structure of hewn stone, with a very losty tower, and melodious hourly chimes. All these sour principal streets are adorned with several public buildings.

But the chief ornament of the city is the college or university, a most magnificent and stately fabric,

It owes its erection to archbishop Turnbull, and was legally sounded by king James II. in 1453, by virtue of a bull from pope Nicholas V. granting it all the privileges, liberties, honours, immunities, and exemptions, given by the apostolical see to the college of Bononia in Italy, for teaching universal learning. They are enabled by the munisicence of a generous benefaction, to send exhibitioners to Baliol college, in the university of Oxford. A rector, a dean of the faculty, a principal or warden, who was to teach theology, three philosophy-professors were established by the first foundation; and afterwards some clergymen taught the civil and canon law there.

In 1577, king Jumes VI. established a principal, three professors of philosophy, sour bursars, a steward to surnish their table, a servant for the principal, a

janitor to look after the gate, and a cook.

The family of *Hamilton* gave some of the ground on which the college stands, with an adjacent field.

Kings, Parliaments, the city of Glasgow, several of the archbishops, and many particular persons, have

been benefactors to it.

In 1662, the earl of Dundonald gave 1000l. sterling to it, for the maintenance of poor scholars. The great Buchanan, and the samous Cameron, had, among

other emment men, their education here.

Several fine Roman stones, digged up in the latter end of 1740, near Kirkintilloch, with very curious inferiptions, have been removed to this university, where before was a good collection of pieces of antiquity, chiefly found near the same place.

Within

Within these few years, very genteel houses have been built for the professors, and an handsome ob-

fervatory erected.

In the higher part of the city stands the great church, formerly cathedral and metropolitan, dedicated to St. Mungo, who was bishop here, about the year 560. It is a magnificent and stately edifice, and surprises the beholders with its stupendous bigness, and the workmanship of the artisan. The several rows of pillars, and the exceeding high spire which rises from a square tower in the middle of the cross, shew a wonderful piece of architecture. It is now divided into several preaching places, one above the other.

Near the church stands a ruinous castle, formerly the residence of the archbishop, who was legal lord or superior of the city, which stands on his ground, and from whom it received its first charter, and many privileges. It is encompassed with an exceeding high wall of hewn stone, and has a fine prospect into the

city.

The great import of this city is tobacco, in which they carry on a most extensive trade. In the year 1769, they imported from Virginia, Maryland, and Carolina, 35,558 hogsheads; in 1770, from the same places, 38,970 hogsheads. But, what is very iemarkable, at the end of the last mentioned year, not any part of this vast stock remained unfold, it being disposed of in different parts of Europe. In the year 1771, their commerce still encreased, having in that year imported 49,015 hogsheads; but of this 1142 hogsheads remained unfold at the expiration of the year. The tobacco trade continued encreasing, till the present unhappy disputes with the colonies, in fome measure, put an end to it, since which time it has run into the channel of the French and Dutch. It is probable, that the merchants of Glasgow, as soon as they

they could to fo that the answer This time by the acquired the acquire

they saw the storm gathering, bought up all they could of this commodity; and there is the more room to form this conjecture, as it is considerably afferted, that they have tobacco enough in their warehouses to answer the consumption for a long time to come. This they are now, 1777, and have been for some time past, selling out at such an advanced price, that by the produce of the stock in hand only, many will

acquire ample fortunes.

The origin of foreign trade in this great city is extremely worthy of attention. A merchant, of the name of Walter Gibson, by an adventure, first laid the foundation of its wealth. About the year 1668, he cured, and exported, in a Dutch vessel, 300 lasts of herrings, each containing fix barrels, which he fent to St. Martin's in France, where he got a gallon of brandy and a crown for each. The ship returning laden with brandy and fait, the cargo was fold for a great fum. He then launched farther into bufinefs, bought the vessel and two large ships besides, with which he traded to different parts of Europe, and to l'irginia. He also sirlt imported iron to Glosgow; for before that time it was imported from Stirling and Barrowstonness, in exchange for died stuffs; and even he wine confumed in this city was brought from Edinburgh. Yet I find no statue, no grateful inscripion, to preserve the memory of Walter Gibson!

We must not quit Glasgoru without observing, that heir printing is a very considerable branch of busites, and they have been remarkable for many cor-

ect editions of the classics.

From Glasgow I went eight miles southward to Hanilton, a town pleasant and well-built, the church of thich is the burying-place of the noble samily of Hanilton. But it is chiefly noted for its sine palace, the tat of the duke of Hamilton, premier peer of Scotland, and nearly related to the royal family of the Stuarts. Vol. IV.

Hamilton house, or palace, is at the end of the town: a large, disagreeable pile, with two deep wings at right angles with the centre. The gallery is of great extent, furnished, as well as some other rooms, with most excellent paintings.

Ruglen is another town in this county, which gives title of earl to a branch of the family of Hamilton.

Crawford Lindsey, in this county, gives title also to the earl of Crawford, who claims precedency as first earl.

In Crawford-Moor, gold has been found in the fand of the brooks after rain, and that in pretty large pieces; and they have dug up lapis lazuli there. The remains of a Roman causeway are to be seen in this

county, from one end to the other.

We then turned to the left for Stirlingsbire, and, after passing the Clyde, came to Kilsyth, a good plain country burgh, tolerably well built, but not large, near which the marquis of Montrose overthrew the covenanters in the civil wars. Here, upon a particular occasion, we went to see Calendar-house, the seat of the unhappy earl of Kilmarnock, commander of the rebel hustars in 1745. It is an old building, that had been some time in decay; but has on the back of it upon an hill, a fine wood of firs. In the front is a vast space of level ground, the Forth keeping in course in the middle; and the great number of gentlemens feats on either fide the banks of the Forth yields a noble prospect from hence. These house are of white stone, the roofs covered with blue flate, which make an agreeable glittering when the fu Thines upon them.

The town of Falkirk is about a mile from Calendar house; but has nothing remarkable in it, except the other old decayed house of the earl of Calendar.

In this neighbourhood is the Carron iron manufactory, in which feveral hundred men are employed, a

who, be Be this : hillories the great advantage of the proprietors. Indeed the whole country wears a new face; manufactures flourishing so much, that it bids fair to be the most populous shire in Scotland. The CANAL, which is to form a communication between the Firth of Forth and that of Clyde, begins on the fouth fide of the Carron. Its course will be above thirty miles, assisted by thirtynine locks. Its western termination is to be at Dalmuir-Cuirn-foot, eight miles below Glafgore; but, for the conveniency of this city, it is proposed to form another branch from the great trench, at a place called the Stocking Bleachfield, between two and three miles diftant from the city.

e flate,

he fun

Tor-wood is in the neighbourhood of this town. It chiefly confifts of firs and beech. The town of Stirling, nine miles off, being built, like Edinburgh, on an hill, makes a fine appearance from hence.

About Falkirk we plainly faw the remains of the ancient work, which they call Severus's wall, Adrian's wall, or Graham's dyke (for it is known by all these names); built by the Romans cross this narrow part of the country, and fortified with redoubts and stations, to defend the fouth country from the incursions of the Pills, Irish, and other wild nations, in the Highlands. This wall reached from Dunbriton Firth (fo they called the Firth of Chyde) to the Forth, and was several times repaired, till the destruction of the Roman empire in Britain, with which it perished. Yet neither this, while it flood, nor the stronger one at Newcastle, called Severus's wall, could so well preferve the country from the invalion of Piels and Scots, but the Romans were often obliged to fend powerful alendar succours to the relief of the distressed Britons. Camden ept the thinks that this wall was built by Antoninus Pius, who, being adopted by Adrian, affumed his name. anusa Be this as it will, it is certain, that in all the Scottish oved, we histories it is called Graham's Dyke. I have already.

G 2

Vol. III. p. 325, given the account of this famous wall, from the work of John Warburton, Efq. in-

titled Vallum Romanum; to which I refer.

There were along the wall great and noble forts, strongly intrenched, and, though within the wall, able to receive a whole army together. The forts which remained in Mr. Pont's time, who traced them all *, were these; one at Langtoun, a mile east of Falkirk ; one just at Rouintree Burnhead ; one at Wester-Gowden, about St. Helen's Chapel; one at the Croykill; a very great one at the top of the Banbill; one at Atchindevy; one at Kirkintilloch, or Kaerpencolloch; one at East-Calder; one at Hiltoun-Calder; one at Bulmudy; one at Simerstone, and over Kilvin river, and Carefloun; one at Atermynie; one at Balcafile, overagainst Banbill; one at Kaellybe, over-against Croykill; one at Roch-hill, over-against the West-wood; a large one at Bankyir, over-against Cafile-Carry; one at Dumbase. In the ruins of that at Bankyir was found a large iron shovel, or some instrument resembling it, fo weighty that it could hardly be lifted by one man. At the same fort also were discovered several sepulchres, covered with large rough stones; and at Dun-Chroe Chyr, by Mony-Abroch, were formerly large buildings. The length of the wall was 36 State miles, beginning between Queen's-ferry and Abercorn; it ranged along welt by the Grange and Kiniel, or Innereving; fo on to Falkirk: from whence it proceeded directly to the forest of Cumerald: next, it ran to the great fort at the Banhill; where have been found feveral stones, some with figures cut upon them, and with inscriptions: from whence it went to the Ped of Kirkintilloch, the greatest fort of all; and so wellward to Dumbarton, with a great ditch upon the north-fide

10

The Lowlands between the sea and high country are generally narrow. Near the coast are many little hills which overlook the sea, and discover towns at a distance, which renders the prospect very pleasant on that side; and there is something striking in the large

rugged romantic mountains on the other:

But the towns which feem large and fair in the diftant prospect, like almost every thing elfe, lose their beauty in proportion as they are approached; a meanness is soon discovered, which shews the condition of the inhabitants; all the outskirts, which increased the extent of them while they were remote, are found to be nothing more than the ruins of little houses, which have been deferted by the inhabitants; for when these houses begin to decay, they do not often repair them; but, taking out the timber, let the walls remain, and build anew upon another fpot. The fishing-towns in particular are extremely disagreeable, as the haddocks and whitings, which hang upon lines to dry, along the fides of the houses, from one end to the other, fill the air with an intolerable stink. It does not however appear from this nuisance, that the inhabitants fuffer in their health; for the children are more numerous than in the inland-towns, and, though they are half naked, yet they are fresh coloured, healthy, and allowed the street of the later of the l and ftrong.

From Kilfyth, we mounted the hills, black and frightful as they were, to find the road over the moors and mountains to Stirling; and, being directed by guides, we came to the river Carron. The channel of a river appeared indeed, and looked as if it had been cut out by art through horrid precipices, to mark out a course for the water; but yet not a drop was at that time to be seen. Great stones, square, and formed as if cut out by hand, of a prodigious-size,

3 la

Tay scattered in a confused manner in the very course of the river, which, as we were told, the sury of the waters, at other times, had hurried down from the mountains. If so, they must have been some ages upon their journey down the stream: for it is not probable, that a flood often comes with a force sufficient to move such stones as these, unless a great quantity of ice, as well as water, comes down upon them together. But, in all probability, they are not driven down by the force of the water at all, but are Roman monuments.

Here we passed another bridge of one arch, not quite so large as that we saw in Galloway, but very like it. It is finely built of free-stone; but the shores being slat, it rises so high, that it is not every head can bear to ride over it. But there was a necessity of building it with one arch only; for no piers in the middle of the channel could have borne the shock of the great stones, which sometimes come down this stream.

From hence, descending on the north-side, we had a view of the Firth of Forth on our right, and of the castle of Stirling on our lest. In going to the latter, we passed the water of Bannockburn, samous in the Scots history for the great battle sought here between king Robert de Bruce, and the English army, commanded by king Edward II. in person; in which the English were utterly overthrown, and that with so terrible a slaughter, that though it was the greatest arms that ever marched from England into Scotland, very sew escaped, and the king with much dissipated himself by slight.

This place is also remarkable for the execrable murder of king James III. whose young son was by some discontented nobles worked up to this impious deed. But when his understanding ripened, he saw the action in its proper light, and was so greatly affected by it, wea

manne Cowen, flatue, with a 35th ve pleasan and me

Edinbur works a battery most im end and it, that he did penance for it ever after, by constantly

wearing an iron chain near his flesh.

Stirling was our next stage, an ancient town, and an important pass, which, together with Dumbarton, is the desence of the Lowlands against the Highlands; for, as one very properly said, Dumbarton is the lock of the Highlands, and Stirling-casse keeps the key. The town is situated exactly as Edinburgh, on the ridge of an hill, sloping down on both sides, and the street gradually ascending from the east to the castle, which is at the west-end. It is large and well-built; and, though it is ancient, yet the buildings are not unlike those of Edinburgh.

The church is also a very spacious building, but not collegiate. It stands in the upper part of the town, towards the end, is of good architecture, and adorned with a losty tower. There was formerly a church, or rather a collegiate chapel, in the castle, and likewise a private chapel, or oratory, in the palace, for the royal family; but they have been long

difused.

the ac-

Joining to the church, on the top of the hill, is a very neat hospital for decayed merchants, after the manner of that at Dundee. It was founded by James Cowen, merchant, and very richly endowed. His statue, as big as life, is at the top of the gate, with an inscription from the 25th of St. Matthew, the 35th verse; and in the garden of this hospital is a pleasant bowling-green, for the use of the gentlemen and merchants.

The castle is not so very difficult of access as that at Edinburgh, but is esteemed equally strong; for the works are able to mount more cannon, and there is a battery that commands the bridge, which is of the utmost importance, and seems to have been the main and and purpose for which it was erected. The walls,

G 4 and

and all the outworks, are fo firm, that they feem in as good condition as if they had been lately built.

I vifited the castle, and went over the noble monuments of the amazing grandeur of the Scottish kings, that are crumbling into dust. Here is a fine palace built by king James V. and a parliament-house superior to that of Westminster.

The palace and royal apartments are all in decay, and likely to continue fo. This is at prefent also the tare of the palaces of Linlithgow, Falkland, Dunferm. ling, and all the other royal houses in Scotland, Hely-

rood-house at Edinburgh excepted.

In the park adjoining to the castle were formerly large gardens. The figure of the walls and grafs. plats is still plainly to be feen. From the top of the castle, is by far the finest view in Scotland: to the east is a vast plain, rich in corn, adorned with woods, and watered with the river Forth, whose meanders are, before it reaches the fea, so frequent and so large, as to form a multitude of most beautiful peninfulas; for in many parts the windings approximate to close as to leave only a little ishmus of a few yards. In this plain is an old abbey, a view of Allog, Ciackmannan, Faikirk, the Firth of Forth, and the country as far as Edinburgh; on the north, the Ochil hills, and the moor where the battle of Dumblan was fought; to the west, the strait of Menteith, as fertile as the eastern plain, and terminated by the Highland mountains; among which the fummit of were r Ben-lomond is very conspicuous.

The park here is large and walled about, as most of the parks in Scotland are; but there is little or me large to wood in it. The earls of Mar, of the name of Erf but most kine, who claimed to be hereditary keepers of the king's children, and of this castle, had an house a the upper end of the town, very finely fituated for prired, prospect, but not for security. The ruins of this house

The bridge at Stirling has only four arches; but they are very large, and the channel widens confiderably below it. At Alloway it is above a mile broad, and deep enough for ships of any burden; so that the Glaffow merchants are certainly in the right to fettle warehouses there, and ship off their goods for the eastern countries.

There is a very confiderable manufacture at Stirling for ferges or shalloons, which they make and dye very well; nor has the English manufacture for shalloons broken in fo much upon them, as it was apprehended it would. This manufacture is a great fupport to the poor people that are employed in it, who

are thereby enabled to live very comfortably.

Stirling was one of the boundaries of the Roman empire in Britain, as appears by the inscription on a flone below the castle, towards the bridge, importing, that one of the wings of their army kept guard there. On the right of the town stood the noble abbey of Cambuskenneth. The river Carron is famous for some Roman monuments, particularly two little hills, called by the vulgar Dunipace, i.e. hills of peace; and, two miles lower, is a round edifice of stone, which, by the description, resembles what the Romans called the temple of Terminus. But Buchanan thinks, they were rather monuments of some great actions performed here.

From Stirling we went directly to Linlithgow, a of the Scotland, which is the least decayed of all the rest, that ouse a bit the least decayed of all the rest, that ouse a bit the least decayed of the kings of the scotland, which is the least decayed of all the rest, that ouse a bit the least decayed of the prized house excepted: for king James VI. reted for prized, or rather rebuilt it; and his two sons, prince of this theory, and prince Charles (afterwards king of England) G 5

had apartments here, which a traveller may eafily diftinguish by the different coats of arms, especially over

those called the Prince's Lodgings.

This palace stands on a rising-ground, which runs into the lake, in form of an amphitheatre, and has a descent refembling terrace-walks. There are two towers at each corner of the court, with apartments, and a curious fountain in the middle, adorned with several fine statues, from whence the water rises to a A noble park also belongs to it. good height. palace was indeed a truly magnificent building, but it is now in a deplorable fituation, having fuftained much damage from the foldiery, in the last rebellion. As there is no possibility of its being repaired, it is great pity such noble materials are not applied to some useful purpose.

The church of St. Michael makes a part of this building, and is a wing on the right-hand of the first court, as the proper offices make the left. The inner-court is very large and elegant for the tafte of the times. In the middle of this is the large fountain I have mentioned, which still shews the remains of

some good carving, and other ornaments.

Here king James V. restored the order of the knights of St. Andrew, and erected a throne and stalls for them in St. Michael's church, making it the chapel of the order. He was likewise the first who ordered the thiftle to be added to the badge of the order; and the motto, viz. Nemo me impune laceffit, which is worn about it in the royal arms, was of his invention. This prince feems to have been very much honoured in the world; for he wore the badges of three orders besides his own; viz. That of the garter, conferred upon him by his uncle, the king of England; that of the golden-fleece, by the emperor, then king of Spain; that of St. Michael, by the king of France.

At

In his time the green ribband was worn by the knights companions of this order; but king fames VII. changed it to the blue, like that of the knights of the garter in England. After the Union, queen Anne, the fovereign of both, to distinguish them, restored the green ribband, and intended to have called a chapter of the order, to bring it once more to

its full lustre; but was prevented by death.

In this town, the earl of Murray, lord regent, was murdered with a musquet-bullet, shot by one Hamilton, in a manner the most deliberate that history furnishes an instance of: he had the good fortune to escape to France; and though undoubtedly an assassing on this occasion, was otherwise a man of honour, as appears from his challenging a gentleman who offered him a large sum to take off a person with whom he had a dispute. The earl was a natural son of king sames V. and, aspiring to the crown, joined with the reformers, having sirst got the revenues of the convents of St. Andrews, and Pittenween, whereof he was abbot, or prior, secured to him and his heirs. His ambition and intrigues were the chief cause of almost all the troubles of queen Mary's reign.

At Linlithgow is a great linen manufacture, as there is at Glasgow; and the water of the lake here is esteemed so extraordinary for bleaching or whitening of linen cloth, that a vast deal of it is brought hither from other parts of the country for that purpose. This lake is fituate on the north-side of the town, and between it and the palace are terrace-walks, which are so beautiful, that a more delightful place can

fearce be feen.

In

Forfishen, formerly the residence of the knights of Malta, is two miles south-west from Linlithgow.

Near a place called Kips, fouth from this town, is an ancient chapel or altar of great unpolished stones, leaning so as to support one another. The learned

G 6

think

think them to be a temple of Terminus built by the Romans; and others still there are, who conjecture them to be a temple of the Celts or Druids. Near this chapel or altar is a circle of great stones, and on two adjacent hills are the remains of old camps, with great heaps of stones, and ancient graves, which some think Roman works.

From Linlithgow we turned to the right, and following the Clyde upwards, from a little above Hamilton, where we were before, we came into the shire of Clydsdale. This tract has some remains of Roman antiquity; for, from Errick-slone to Mauls Mitre, which borders upon the shire of Renfrew, are evident sootsteps of a Roman causeway for several miles together; and there is a tradition, that another Roman street went from Lanerk to the Roman camp near Falkirk.

Lanerk is the capital of this county, but is no extraordinary town; its bridge, however, is very re-

markable.

A little below this town the river Douglas falls into the Clyde, and gives the name of Douglas falls into the lands near it. In a vale near this river flood a very old castle, which had been the paternal seat of the great samily of Douglas for above a thousand years; but, by the frequent additions to the building, it was become such a wild irregular mass, that, at a distance, it seemed rather like a town than a single sabric, though the apartments were very noble. On the 11th of December, 1758, this ancient castle was destroyed by an accidental fire.

The complete history of this family of Douglas would take up a volume by itself, as it actually has in a late work, where the heroes of the name are fully set forth, and all the illustrious actions they have been concerned in. I shall only observe, that there are no less than seven branches of this samily in the peerage; namely, the late duke of Douglas, who was

the Man har Pre

Clya at a vant gard full

of fur cloth very wood

ning floods treme of this concear

On

The r beneath floney of the ftra natural on the

chief of the name, the duke of Queensberry and Dover, the earls of Morton, Dumbarton, March, and the lords Mordington and Forfar, the latter of whom was unhappily killed at the fight near Dumblain, against the Pretender.

The country abounds with coals, peat, and limefione; but what turns to the greatest profit, are the

lead-mines belonging to the earl of Hopton.

Not far from Lanerk are the celebrated falls of the Clyde: the most distant are about half an hour's ride, at a place called Cory-Lin, and are seen to most advantage from a ruinous pavillion in a gentleman's garden, placed in a losty situation. The cataract is full in view, seen over the tops of trees and bushes, precipitating itself, for an amazing way, from rock to rock, with short interruptions, forming a rude slope of surious soam. The sides are bounded by vast rocks, clothed on their tops with trees. On the summit and very verge of one is a ruined tower, and in front a wood, overtopt by a verdant hill.

A path conducts the traveller down to the beginning of the fall, into which projects a high rock, in floods infulated by the waters, and from the top is a tremendous view of the furious stream. In the clifts of this savage retreat, the brave Wallace is said to have concealed himself, meditating revenge for his injured

country.

On regaining the top, the walk is formed near the verge of the rocks, which on both fides are perfectly mural and equidiftant, except where they over-hang. The river is pent up between them at a diftance far beneath, not running, but rather fliding along a stoney bottom sloping the whole way. The summits of the rock are wooded, the sides smooth and naked, the strata narrow and regular, sorming a stupendous natural masonry. After a walk of above half a mile on the edge of this great chasm, on a sudden appears

the

the great and bold fall of Boniton, in a foaming sheet, and a far extending milt arises from the furface. Above that is a second great fall; two less succeed. Beyond them the river widens, grows more tranquil. and is feen for a confiderable way, bounded on one fide by wooded banks, and on the other by rich and

fwelling fields.

After viewing these tremendous cataracts, we went westward into the shire of Prebles. The first town we came to of any note was Peebles, which stands on the bank of the Tweed, and is the capital of the county. The town is small, and but indifferently built or inhabited: yet there are some good houses in it. It was formerly remarkable for three churches, three gates, three streets, and three bridges, of which that over Tweed has five arches.

The country hereabouts is very hilly; but those hills are covered with sheep, which are a principal part of the estates of the gentry. A large quantity of them are fent into England, to the great damage of the poor, who are thereby deprived of the advantage of manufacturing their wool. They used formerly to export it to France; but, by the act of Union, the exportation of it was prohibited, upon the severest penalties.

The county of Tweedale has two remarkable lakes in it; the one, called West-water Lake, which abounds with eels and other fish. The other is Lochgenen Lake, upon Genen-hill, which falls into Annandale from a precipice of 250 feet high, where many times

the fish are killed by the fall of the water.

The Fragers were ancestors by marriage to the family of Tweedale; and of this name was that great captain, who contributed so much to the victory which the Scots obtained in one day over three English armies at Roslin, 1301; during Wallace's adminiftration.

Merlin is faid to be buried in the church-yard of Drumelzier, in this county; and, according to an old prophecy, "That the kingdoms should be united, when Tweed and Pansel met at his grave," they say, that it happened so by an inundation, when king James VI. came to the crown of England, anno 1603, the only time, before or since, it ever did so.

Some remains of antiquity are visible in this county. The place called Randal's Trench seems to have been a Roman camp, and a causeway leads from it half a

mile together to the town of Lyne.

In this county are two very lively monuments of the vanity of human glory. The first is the soundation of a prodigious building (more like a royal palace, than the seat of a private nobleman) begun by the earl of Morton, whose head was no sooner cut off, than his design perished; for it has never since been carried on.

The other is the palace of Traquair, built and finished by the late earl of Traquair, for some years lord high chancellor of Scotland, and a person in the highest posts both of honour and profit in the kingdom, who yet lost all by the fatality of the times; for, growing into universal dislike by his conduct under Charles I. he sunk into the most abject condition of human life, even to want bread, and to take alms; and died in those miserable circumstances about a year before the Restoration. The house is noble, the deign great, and well finished; but the owner was bon turned out of it by his enemies, who thought the paring of his life an act of great mercy.

Bishop Burnet represents this earl as a very meanpirited man, and one that suffered himself to be made vile a tool in other people's mischiefs, that he fell upitied. It is remarkable, that he was despised even y the party which he had served, and but too saith-

ally adhered to.

Here

SCOTLAND.

Here we faw the ruins of the once famous abber of Melross, the greatness of which may be a little gueffed at by the vast extent of its remains. One may still distinguish many noble parts of the monastery, particularly the great church or chapel, as large as fome cathedrals, the choir of which is visible, and 140 feet in length, befides what may have been pulled down at the east-end. By the thickness of the soundations, there must have been a large and strong tower, or steeple, in the centre of the church. There are likewife several fragments of the house itself: and the court, and other buildings, are so visible, that it is eafy to know it was a most magnificent place in its day,

I he country fouth-east from Tweedale is called Tiviotdale, or the shire of Roxburgh: in which are some footsteps of Roman encampments; and a military way runs from Hounam to Tweed, called the Roman Caufe.

way, and, vulgarly, the Rugged Caufeway.

The town and castle of Roxburgh are both now demolished. They were samous in the history of both nations, during their mutual wars, when the town was frequently taken and retaken, and in the fiege of which king fames II. of Scotland was killed by the buriting of a gun.

Jedburgh is a royal burgh, on the river Jed. It was one of those towns that suffered in the rebellion in

1715.

The duke of Roxburgh has a great estate. His grace's house, called Fleurs, has been finely embellished of late years, and is a noble seat; and the country about it, which was formerly wild and rugged, is mountain now greatly improved and cultivated; and fine planton and cultivated in the house. tations of trees and viftas furround the house.

From hence we came to Kelfo, an handsome market-town upon the bank of the Tweed, which, being the elder fo near the English border, and having one of the merit, a great roads from Edinburgh to Newcostle lying through ments to

town

ege of by the

ed. It

Here are the ruins of an ancient monastery, founded by king David, for the Ciftertian monks, an order instituted about the year 1000 in Burgundy. It has been very large, and part of it now ferves for the parifh church.

The country about Kelfo is very pleafant and fruitful, on both fides the Tweed. The river here does not part England from Scotland; but you are upon Scots ground for four miles, or thereabouts, on the fouthfide of the Tweed; and, the farther west, the more the Tweed lies within the limits of the country.

From Kelfo we went north, where we passed through Lauderdale, a long valley on both fides of the little river Lauder, from whence the family of Maitland, first earls, then dukes, and now earls again, took their title.

The country is good here, and fenced with hills on both fides. The river Lauder runs through it, keeping its courfe due north.

The town of Lauder is a royal burgh, the feat of the commissariot; and very pleasantly situated. It is remarkable for the execution done upon the minions of king James III. by the Scots nobility, who, headed lion in by the earl of Angus, took them out of the court, and hanged them over Lauder-bridge. The feat of the . His noble family of Maitland, earls of Lauderdale, is callembeled Lauderfort: it is a stately house, about the middle of the valley, on the river, but not large.

We kept the great road over an high ridge of mountains, from whence we had a plain view of Mid-Lathian. One of these mountains is called Soutra-hill.

Lathian. One of these mountains is called Soutra-bill, e man and belongs to a branch of the family of Maitland, being the elder brother of which house was a person of great of the merit, and raised himself by his personal accomplishments to the highest posts in the army.

I could

I could not pass this way to Edinburgh without going off a little to the right, to see two very fine seats. One of them is an old abbey, belonging to the marquis of Lothian, (of the ancient name of Ker) a younger branch of the house of Roxburgh, at Newbottle; whose predecessor, Mark Ker, being abbot of it, turned Protestant, and got it settled on him, and his heirs. It is an old building, but finely situated among the most agreeable walks and rows of trees, all sull grown; and contains one of the best chosen collections of pictures, statues, and busts, in Scotland.

In the wood adjacent to this feat are some subterraneous apartments, and passages cut out of the live rock. A few miles distance from thence, near Hawthorn Den, the residence of the celebrated poet Drummond, are, as I was informed, others of the same nature, but of greater extent, which Dr. Stukeley calls a Pissish castle. These places, in fact, were excavated by the ancient inhabitants of the country, either as receptacles for their provision, or for retreats for themselves and families, in time of war.

Two or three miles distant from Newbottle is Dalkeith, a small town adjoining to Dalkeith House, the seat of the duke of Buccleugh, originally the property of the Douglasses, and was, when in form of a castle, of great strength; and, during the time of the regent Morton's retreat, was called the Lion's Den. The portraits here are very good, and well worth observa-

tion.

I shall conclude this letter with the following infeription on the tomb-stone of one Margaret Scott, who died in the town of Dalkeith, February 9, 1738.

Stop, paffenger, until my life you read: The living may get knowledge by the dead. Five times five years I liv'd a virgin's life: Ten times five years I was a virtuous wife: of Fort ciently I cro

Ten times five years I liv'd a widow chaste; Now, weary'd of this mortal life, Frest. Between my cradle and my grave have been Eight mighty kings of Scotland, and a queen. Four times five years the commonwealth I saw; Ten times the subjects rose against the law. Twice did I see old prelacy pull'd down; And twice the cloak was humbled by the gown. An end of Stuart's race I saw: nay, more! My native country sold for English ore. Such desolations in my life have been, I have an end of all persection seen.

LETTER IV.

Containing a DESCRIPTION of the ancient Caledonia, or northern Part of Scotland; and particularly of the Shires and Towns of Fife, St. Andrew's, Perth, Dumblain, Alloway, Culross, Scone, Angus, Dundee, Montrose, Aberdeen, Buchan, Murray, Elgin, Inverness, and the Highlands, &c.

AM now to enter the true and real Caledonia; for that part of the country on the north of the Firth of Forth is alone called by that name, and was anciently known by no other.

I crossed the river at Queensferry, seven miles west of Edinburgh, into the shire of Fife; and, as the most considerable places in this county are on the sea-side, or near it, I directed my journey east along the coast. The first place we came to was the burgh of Inner-keithin.

t, who

keithin, an ancient walled town, with a spacious hirbour opening from the east into the river, which has been lately much neglected for want of trade. The

town, however, is large, and ftill populous.

I cannot pass over a tragical story, which happened in this town in the reign of the late queen Anne. The master of Burleigh (so the eldest son of a lord or viscount is called, while the father is living) sell in love with a young woman in his father's family; but could not prevail with her either to marry him, or to sacrifice her virtue to him; which being known, she was fent away, and he persuaded to travel. However, before his departure, he declared she should be his wife at his return; and if any one else should marry her in his absence, he would murder him. This passed without much notice, and the young woman was soon after married to a schoolmaster in this town.

The gentleman returned, and understanding who was her husband, went to his house at noon-day, pulled out a pistol, and shot him dead on the spot, mak-

ing his escape unmolested.

But a proclamation being afterwards iffued, with a reward of 2001 for apprehending him, he was at last taken, and tried at Edinburgh, by the lords of the justiciary, and condemned to have his head cut off. Great intercession was made to the queen for his pardon; which proving inessectual, he found means to make his escape out of the Tolbooth of Edinburgh, disguised in his sister's cloaths, the night before he was to have been executed.

After that, he appeared in the rebellion of 1715, and was in the battle of Dumblain or Sheriffmuir; but again escaped with his life, though his estate, which was but small, was forseited among the rest.

He lived many years after, upon a small allowance from his fillers, principally in England. He

he was

Here also is a decayed court, or royal palace, of the kings of Scotland, but by whom built is uncertain. Almost all king James the fixth's children were born in it, particularly king Charles I. and the princefs Elizabeth, afterwards queen of Bohemia; his queen made this place her particular residence, and had it feitled upon her by way of jointure. Here the built berielf an apartment, over the arch of the great gate, for her particular retirement, having a gallery reaching from it to the royal lodgings. All is now ruinous.

The church has still a venerable face, and at a distance seems a mighty pile. The building being once vastly large. What is left appears too heavy for

the present dimensions.

The people have a manufacture of linen for their support, the diaper and the better fort of linen trade being carried on here, and in the neighbouring towns, with more hands than ordinary. The marquis of I weedale has a great estate in these parts, and is here-

itary chamberlain or keeper of the royal house.

The rocking-stone, near Balvaird in Pise, was a temarkable curiosity. It was broken by Oliver Cromett.

The rocking-stone, near Balvaird in Pise, was a temarkable curiosity. It was broken by Oliver Cromett.

The velt's soldiers, and then it was discovered, that its allown potion was performed by an egg-shaped exuberance in the middle of the under surface of the upper stone, which was inserted in a cavity in the surface of the

lower stone. As the lower stone was slat, the upper was globular; and not only a just proportion in the motion was calculated from the weight of the stone, and the wideness of the cavity, as well as the oval sigure of the inserted prominence; but the vast bulk of the upper stone absolutely concealed the mechanism of the motion; and, the better still to impose on the vulgar, there were two or three surrounding slat stones, though that only in the middle was concerned in the seat. By this pretended miracle they condemned of perjury, or acquitted, as their interest or affection led them; and often brought criminals to consess what could be no other way extorted from them.

From hence turning east are many seats of private gentlemen, and some of noblemen, particularly one belonging to the earl of Morton at Aberdour, which fronts the Forth to the south; and the grounds belonging to it reach down to the shore; and another of

the earl of Murray at Donebriffel.

From this part of the Forth, to the mouth of Innerdeithin harbour, is a very good road for ships, the water being deep, and the ground good; but the western part, which they call St. Margaret's Bay, is a steep shore, and rocky, there being twenty sathom water within a ship's length of the rocks. So that is a south east wind blows hard, it may be dangerous riding in it; but this wind blows so seldom, that the ships often venture it.

He that will view the county of Fife, which is wedged in by the Forth and the Tay, and shoots out far into the east, must go round the coast; and yet there are six places of note in the middle of the county, which are superior to all the rest, and must not be omitted: Kinross, Lesly, Falkland, Melvil, Balgony, and Cowpar; the last a town, the others great houses; and one, viz. Falkland, a royal palace.

The two fides that still stand in the inner square. thew a beautiful piece of architecture. It confifts of two stories, with rows of round marble pillars of the Corinthian order, fet in fockets of stone between every window; on each fide of the window, a bust in bassorelievo of the emperors and emprefies, and at the top of each pillar a statue as big as the life. There are twenty-two bufts and twelve pillars still remaining. The other two parts of the quadrangle were burnt down by Oliver Cromwell's army. You enter this palace by two stately towers, and on the right is a chapel, still well preserved, with statues as big as the life in the niches on the outfide. Here were fpacious gardens, with a park, well planted with oak, and stocked with deer, paled round for eight miles; but the oaks were all cut down by Cromwell, to build his citadel at Perth, and the barracks; the park he ploughed up, and only here and there some of the pales are left.

The town of Falkland is clean, not unlike Woodflock in Omfordshire. It is a borough-corporate, of
which the king is always provost; and they chuse aldermen out of their own council. It is fituated on
the north-east foot of Lomond hill, which is an English
mile to the top, covered with the finest pasturage for
sheep, from whence is a very extensive prospect.

An English reader will be surprised to hear of such numbers of palaces; but, however mean our thoughts may be of the Scotch court in ancient times, their kings had more fine palaces than most princes in Europe; for in the time of king James IV. they had, all in good repair, and in use, the several royal palaces of Holy-rood-house, and the castle at Edinburgh, the royal palace in the castle at Stirling, Linlithgow, Dunserming, Falkland, Scone, the eastles of Dunbarton, Black-noss, and Inverness.

Q

I omit leffer feats and hunting houses, of which king James V. had several; and the several palaces of earl Morton, and others, which were forfeited into

the king's hands.

The fouth coast of the county of Fife abounds with towns; and the following thirteen are royal burghs; viz. Innerkeithin, Bruntisland, Kingborn, Kirkaldy, Dy. fart, Pittenweem, Anstruther Wester, Anstruther Easter, Kilrinny, Crail, St. Andrews, all on the coast; Dunfermling and Cowpar, in the midft of the county. It contains also these other towns of note, viz. Toryburn, Aberdour, the two Wemys's, Levinfmouth, Ely, St. Manan's, and Newburgh on the Tay: and it has in it four presbyteries; viz. at Coupar, St. Andrews, Kirkally,

and Dunfermling.

The thire itself takes its name from Fyfus, fur. named Duffus, to whom it was granted by king Kenneth II. for his valour against the Piels, about the year 840. His pollerity were first cailed Thanes of Fife, and afterwards earls, by Malcolm 14. about the year 1057, and endowed with greater privileges than any other earls of the kingdom, because of their extraordinary fervices; a famous monument of which was that called Clan Macduff's Cross, on the public road to Abernethy, to which if any within the ninth degree to the great Macduff, who was the chief influence ment of fubduing the tyrant Macbeth, should have recourse in case of manslaughter, he was to be pardoned on paying a small number of cattle. This monument had an inscription importing those privileges now worn out; and was in fuch antiquated terms, mixed with Macaronic or half Latin words, that few men now living would have been able to make it out. mrofs, b

From this Macduff, the families of Douglas, Wenns, and the clan Chattan, are faid to be descended. The

earls of Rothes is hereditary theriff of Fife.

VOL. IV

Having feen Aberdour, I took a turn, at a friend's invitation, to Lefly; but by the way stopt at Kinrofs, where we had a view of two things worth noting; first, the famous lake or lough, called Lough Leven. in an island of which stands the castle, where queen Mary, commonly known in England by the name of queen of Scots, was confined by the then reformers, being first compelled to quit her favourite Bothwell. and afterwards her crown.

The lough itself is worth feeing; it is very large, being above ten miles in circumference, in some places deep, and famous for fish. Formerly it had good falmon, but now chiefly trouts, perch, pikes, &c. Out of it flows the river Leven, which runs from thence

to Lefty.

Wemys

. The

Having

At the west-end of the lake (the gardens reaching lown to the water's edge) stands the most beautiful nd regular piece of architecture (for a private genleman's feat) in Scotland; I mean the house of Kinrofs, elonging to Sir John Hope Bruce, Bart. The town, which has a very good market, and a street tolerably sell built, lies at a little distance from the house, so not to obtrude upon its privacy, and yet so as to e ready to wait upon its call. It is all beauty; the one is white and fine, the order regular, the contri-ance elegant, the workmanship exquisite.

Sir William Bruce, the furveyor-general of the orks, the Wren of North Britain, was the founder, s left many noble monuments of his admirable skill d taste in those parts; such as the palace of Holyad at Edinburgh; the house of Rothes, and this at house, besides several others.

The fituation of this house of Kinross would be dised by some for its being so very near the water: omuch that fometimes, when the lake is fwelled winter rains and melted fnows, it reaches to the VOL. IV.

very gardens; but as the country round is dry, free from stagnated bogs, and unhealthy marshes, this is of very little inconvenience, if any. Sir William planted numbers of fir-trees upon the land round his house, which the next possessor, Sir John Hope Bruu, was as careful to improve as his grandfather was to plant. Posterity will find the advantage of this talte, which, if it spreads as it has begun, will in time make Scotland a fecond Norway for fir; for the Lowlands, as well as the Highlands, will be overspread with timber.

From Kinress I came to Lesty, where I had a full view of the palace of the earl of Rothes, built in the reign of king Charles II. by the faid Sir William Bruu

Here it was that our king fames II. when duked York, lodged, most part of the time, when he was obliged by his brother to retire into Scotland; and his apartments are still called the duke of York's lodgings.

The magnificence of the infide of this house is un usually great; but what is very particular, is the long gallery, which is the full length of one fide of the building, and is filled with paintings, but especial (as that is at Drumlanrig) of the great ancestors the house of Rothes or Lesty, full lengths, and in the robes of office.

The rooms of state at Kinrofs are well supplied with valuable pictures, many of which are of princes, & but most, if not all the full lengths in this gallery Rothes, are of the family, and the immediate and tors of the prefent earl, most of them having bee peers, and possessed of the greatest places of trusti Scotland, from the year 1320, to 1725; so that may imagine there may well be enough to furnil gallery.

Though the house is magnificent, I cannot say the fituation of it is fo advantageous as that of some other oom of feats; for it has no extraordinary prospect from the

The park on the fouth-fide is very beautiful, fix miles in circumference, walled round, and diversified with little woods of fir-trees, which have vistas reaching through them up to the house. The gardens are at the east-end of the house, well designed and planted, extending to the angle where the two rivers meet; so that they are watered on the north and east-fide, and on the south are parted with a wall from the park, the west-end of them beginning from the house.

The town of Lefly (seated at a small distance west from the house, or a little north-west) has a good market, but is, in no other respect, considerable. The house aforesaid is the principal glory of the place.

From Lefly we turned fouth to the coast, and came to Bruntisland, fituated in the middle of the north-fide of the river Forth, just opposite to Leith; so that we have from hence a fine prospect as well of the road of Leith, as of the city and castle of Edinburgh. Here is a very commodious harbour, which has no bar, but enters, as if it had been made by hand, into the centre of the town; fo that the ships lie with their broadfides to the very houses; and it is the common port of fafety to all fhips that happen to be forced up the Forth by storms, or contrary winds: and ships trading on the coast frequently winter here. The water is commonly 18, and, at spring-tides 26 feet deep within the harbour; fo that it is capable of receiving and careening the largest men of war. The town is adorned also with a beautiful church, and has a large townhouse and goal.

Here is a manufacture of linen, as there is upon all he coast of Fife, and especially for green-cloth, as it is called, which has been several years in great demand in England, for printing or painting, in the

oom of callicoes, which are prohibited there.

1 2 Next

Next to Bruntisland, upon the same coast, is King. horn, noted for its thread manufacture, which the women chiefly carry on: the men being generally seamen upon all this coast, as high as the Queen's-ferry.

Great numbers of porpoises are seen almost constantly in this Frith, which the men make a practice of shooting, and then bring on shore, and boil their size into train-oil, as they do that of whales, and several other great fish, which they sometimes meet with thereabouts. But the Firth affords a much more regular fishing-trade lower down; of which in its place. The ferry from Leith to the shore of Fise is fixed in

Kingborn, which is of confiderable advantage to it; though fometimes the boats, by stress of weather, as

driven into Bruntisland.

East of this town is Kirkaldy, a larger, more populous, and better-built town, than the other, and, indeed, than any on this coast. It consists chiefly of our street, running along the shore from east to west a sul mile, very well built. It has some considerable mechants in it, in the most extensive sense of the word besides others that deal largely in corn, exporting great quantities of it both to England and Holland. Other again trade in linen to England, who in return bring back all needful supplies of foreign manufactures.

Here are several coal-pits, not only in the neighbourhood, but even close to the very sea, at the webend of the town, and where, one would think, it tide should make it impossible to work them. At it east-end of the town is a convenient yard for building and repairing of ships; and, farther on, several sale.

pans, for boiling and making falt.

Dysert boasts of being a royal burgh; but, now withstanding, it is a very decaying corporation.

We came next to a village called the Wester-Wenn belonging to the earl of Wennys, whose house stands little farther east, on the top of an high cliff, with its sim bow had Behi with on o are n whice Fr Buck wholl and The

which river a coal-we of the they ha looking down upon the fea; from whence it really appears with an air of magnificence, as commanding the prospect of the Firth, and the shore. The armour of the great Macduff, ancestor of this noble family, are preferved here, and always shewn to strangers. At the west-end of this cliff is a small plain, once a bowling-green, where the late earl, being admiral, had some small field pieces planted, to answer salutes. Behind the house is a small and irregular court-yard, with two wings of building, being offices to the house on one fide, and stables on the other. Gardens there are none, only a large well-planted orchard, between which and the house, the road goes on to Easter-Wemys.

From thence you come to another village, called Buckhaven, inhabited by fishermen, who are employed wholly in catching fresh fish every day in the Forth, and carrying them to Leith and Edinburgh markets. The buildings are but a miserable row of cottages;

vet there is fcarce a poor man it.

res.

Here we saw the shore of the sea covered with thrimps, like a thin fnow; and as you rode among them, they would rife like a kind of duft, and hop like grashoppers, being scared by the footing of the horfe.

Beyond this is the Ely, a little town, but a very fafe and good harbour, firmly built of stone, almost like the Cobb at Lime, though not projecting into the fea so much as that. It stands a little on the west-side of the mouth of the Leven; the falmon of which river are

esteemed the best in this part of Scotland.

To this town the earl of Wemys brings his coal, which he digs about two miles off, on the banks of the river Leven; as also what falt he can make. coal-works are greatly prejudiced by the breaking in of the water, notwithstanding the immense charges they have been at to prevent that inconvenience.

H 3 The

The people, who work in the coal mines in this country, partly from their poverty and hard labour, and partly from the black hue which they get from the coal, make a frightful appearance.

From hence we have feveral small towns on the coast, as Criel or Crail, Anstruther or Anster, as it is usually called, also the port of Pittenweem; these are

all royal burghs.

Pittenweem is a port and harbour very conveniently fituated near the mouth of the Forth, in the shire of Fife; and great quantities of herring, cod, and other

fish, are taken here.

Over-against this shore, and in the mouth of the Forth, opposite to the isle of the Bass, lies the isle of May, known to mariners by a light-house upon it. The only constant inhabitant is said to be the man maintained there by the government to take care of the sire in the light-house. It was famous in former times for barren women going to St. Adrian's shrine there.

Here the *French* fleet lay with fome affurance, with the Pretender on board, in 1708, when the *English* fquadron approaching, the four o'clock gun gave the alarm; upon which they immediately weighed, got under fail, and made the best of their way, the *Eng-*

lish in vain pursuing them.

The shore of the Firth ends here, and the Estuarium or mouth opening, the land of Fife falls off to the north, making a promontory of land which the seamen call Fiseness, looking east on the German Ocean; after which the coast trends away north, and the first town you come to is St. Andrew's, an ancient and once slourishing city, the metropolis of all Scotland, the seat of the first university, and, before the Revolution, an archbishop's see. At this time it is a most august monument of the splendor of the Scots episcopal

Full in front, at the bottom of a long descent, appears the city, placed at the extremity of a plain at the water's edge. Its numerous towers and spires give it an air of vast magnificence, and serve to raise the expectation of strangers to the highest pitch. On entering the west port, a well-built street, strait, and of a vast length and breadth, appears; but so grasgrown, and such a dreary solitude lay before us, that it formed the persect idea of having been laid waste

by the pestilence.

On a farther advance, the towers and spires, which at a diffance afforded fuch an appearance of grandeur, on the near view shewed themselves to be awful remains of the magnificent, the pious works of past generations. A foreigner, ignorant of the history of this country, would equally enquire, what calamity has this city undergone? Has it suffered a bombardment from some barbarous enemy, or has has it not, like Lisbon, felt the more inevitable fury of a convulsive earthquake? But how great is the horror on reflecting, that this destruction was owing to the more barbarous zeal of a minister, who, by his discourses, first inflamed, and then permitted a furious crowd to overthrow edifices, dedicated to that very Being, he pretended to honour by their ruin! The cathedral was the labour of an hundred and fixty years, a building that did honour to the country; yet in June 1559, John Knox effected its demolition in a fingle day.

The town of old confifted of four large streets lying from east to west, almost parallel to one another. The northernmost of the four, called Swallow-street, though formerly the principal, is now totally ruined, not so much as one house remaining. The other three by their regularity do not seem to have been a fortuitous concerns of houses, as most of the other

fortuitous concourse of houses, as most of the other

H 4 towns

towns of this country do; all of them terminating eastward at the cathedral, which look upon each other, and feem to lament their decaying condition. For though the town was heretofore about two miles in circumference, there remain now hardly 1000 houses; and of those near 200 are become ruinous, and not habitable. The number of inhabitants still amounts to above 4000; but many of them have nothing to do, there being neither trade nor manufactures in the place; though at the same time it has an harbour, but capable of receiving only small vessels. Near the town is plenty of free-stone, of which all the houses are built.

Before the Reformation, this city was crouded both on account of trade and religion, pilgrims coming hither in great numbers to visit the relics of St. Andrew, faid to be brought over by St. Regulus, about the end of the fourth century, from Patras in Greece, where that apostle suffered martyrdom. Here were three religious houses, a Francisan, Dominican, and Augustine priory, the last founded by Robert bishop of St. Andrew's, who died 1139, and was established upon fome of the revenues formerly belonging to the ancient Culdees of this place. James Stuart, afterwards earl of Murray, and regent of Scotland, was, in his younger days, prior of it. This monastery was more like the magnificent palace of a prince, than a convent of monks professing poverty, as appears still by its ruins, and particularly by the wall that encompassed it of fine hewn stone, with many battlements and turrets.

Here is now only one parish-church, that of the Holy Trinity, remaining; but there are two others, which are rather chapels, one at St. Salvator's college; of which, however, no use is made, it having no endowment, and the provost of that college being often a layman, even in a Presbyterian sense. The other is the chapel belonging to St. Leonard's college, the pro-

vost whereof must be a minister.

The church of the Holy Trinity is an ancient and stately edifice, built with fine free-stone, in form of a cross, and has at the west-end an handsome spire in good repair. In it is a fine monument of archbishop sharpe, who was assassinated upon a moor, as he was coming home in his coach. It was erected by the archbishop's son, Sir William Sharpe, Bart. who, to secure it from the sate he feared it might be liable to, mortissed 6000 marks to the city of St. Andrew's, to keep it in constant repair: which has had its intended effect; for the magistrates are very careful of it, and would be very severe upon any one who should attempt to deface it.

The

On the north side of the town was the old castle, of which now nothing is remaining but the walls, built by Roger bishop of St. Andrew's, who died 1202, being the second son of Robert de Bellomont, earl of Leicester, and chancellor of Scotland. It was repaired by cardinal Bethune, and archbishop Hamilton; the former of which procured George Wishart to be burnt here in the parade, while from his window he glutted his eyes with so horrid a spectacle; but was himself afterwards assaffinated, 1546, in the same place; to revenge whose death, the queen regent permitted it to be attacked by the French, from whom it suffered greatly. But at the Reformation it suffered more, and its ruin has been completed since the Revolution.

To the east of the castle are the ruins of the stately cathedral, sounded by bishop Arnold, who died 1163, and sinished by bishop Lambertoun, who died 1328. It was in length from east to west 370 feet, and the cross from south to north 180; its breadth 65, and its height 100 feet; though some draw another kind of ichnography, and make it seven feet longer, and two broader, than St. Peter's at Rome; and for the height, as well as the beauty of its pillars, and the symmetry

. H 5

and proportion of the whole it was one of the best Gothic structures in the world.

Near the ruins of the cathedral, are still remaining the walls of the most ancient chapel of St. Rule, with the great square spire still very entire. It is in height 105 feet, and made of such large and durable stones, that though it was built so many ages ago, yet so little has it suffered by the injuries of the weather, that a small sum would save it from falling for many ages to come; and as this probably is one of the most ancient monuments of Christianity in Great Britain, it is pity it should go to ruin for want of a suitable reparation.

This city is famous particularly for its university, consisting of three colleges, sounded by Henry Wardlaw, bishop of St. Andrew's, in the year 1412. It obtained very ample privileges and immunities from pope Benedies XIII. which were afterwards confirmed to them by king James I. of Scotland, and by several other succeeding kings. During episcopacy, the archbishops were chancellors of it. The rector is chosen yearly, and by the statutes ought to be one of the principals of the three colleges here, called St. Salva-

st. Salvator's college was founded by James Kennedy, bishop of St. Andrew's, anno 1448, who erected the edifice, furnished it with costly ornaments, and endowed it with sufficient revenues for a doctor, a bachelor, and a licentiate of divinity, four professors of philosophy, and eight poor scholars. The earl of Cassis settled a maintenance for a professor of philosophy. It has a good library, sounded by Dr. Sheen. The edifice itself is a stately pile of hewn stone, has a large vaulted chapel covered with free-stone, and overit is a very losty spire. The common hall and schools are vastly large; and the cloisters and private lodgings for masters and scholars have been very magnificent and con-

St. Leonard's college was founded by John Hepburne, prior of St. Andrew's, in the reign of king James V. with falaries for a principal and warden, four professors of philosophy, and eight poor scholars. A professor of philosophy, and eight poor scholars. A professor of philosophy was added by Sir John Scot, of Scots-tarvet, with a liberal salary. He also augmented the library very considerably; and Sir John Wedderburn, at his death, lest a great collection of books to it. Fordun's MS. of the Scottish history is inthis library.

By an act made 20 Geo. II. these two colleges were united, in pursuance of an agreement they had made

for that purpose.

The New College was founded by archbishop Bethune, or Beaton, uncle to the cardinal of that name, with endowments for a principal and professor of divinity, and some students in the same faculty; for no philosophy is taught in this college.

The last two colleges, having a better revenue to support them than that of St. Salvator, are in much better repair. In the latter, king Charles I. held a Parliament, in a large spacious room able to seat 400 persons in regular order; and it still retains the name

of the Parliament-room.

A professor of mathematics was of late years added to this university; as was also, not long since, a professor of medicine, with an handsome endowment by his grace fames, late duke of Chandos; whom the university, upon the death of the duke of Athol, in gratitude, chose to be their chancellor; which office is during life; and to that alone, and that of his vice-chancellor, belongs the conferring of all university degrees.

H 6

Mr.

Mr. James Gregory, professor of mathematics in this university, famous for his knowledge in that science, erected, in the college gardens, a commodious observatory, and surnished it with good mathematical instruments.

It has produced many fearned men; among others, the famous lord Napier, who invented logarithms, Sir Robert Murray, Sir Andrew Balfour, and that

great lawyer Sir George Mackenzie.

The harbour here has fuffered so much by the encroachments of the sea, that I fear it will never be sufficiently repaired. The pier is sounded upon a rock of free-stone, in length about 400 feet; but this rock extends itself into the sea 500 feet farther, on the point of which stands a beacon; and the great rolling of the sea, breaking over the rock, between the pierend and this beacon, makes the harbour very dangerous. In the year 1728, it was proposed to be repaired, and the pier carried as far as the beacon, and a brief was granted for that purpose; but the collections were too small to make any great advance,

By all we have faid, it will appear, that this ancient city, and its university too, are in a very declining state. The archbishop's seat, and ecclesiastical courts kept there, beside the great resort of pilgrims to the convents, brought great business thither; which being now disused, and one new college erected at Edinburgh, and another at Aberdeen, contribute much to the decay of both. The city enjoys still some privileges by the original charter yet extant, whereby it was incorporated by king David, anno 1153.

The reviving the lustre of this once splendid city, recovering to its former utility this once commodious haven, and thereby restoring to its ancient prosperity the happily-seated peninsula of Fife, says a very ingenious author, would be a noble testimony of the wisdom and public spirit of the present generation. though fo long neglected, proceeds he, is very practicable, with a fmall degree of attention, and without demanding any large expence. The country about it abounds in grain, as also in coals and falt; so that provisions being plenty, labour is of course cheap. There are likewise in its neighbourhood great flocks of theep, producing large quantities of wool, which is of fuch a staple, as may be easily foun and wove into a fort of light stuff, resembling the etamines of Rheims, Amiens, Mans, Lude, Nogent le Rotru, and other places in France, which are used for the nuns veils, the cloathing the fecular clergy in most popish countries, and many other purposes; or the flametes of the Low Countries, not much unlike them, but of all colours, and of which there is in the Levant a great confumption; which manufactures might, without difficulty, be brought to, and established in St. Andrew's, where there are spare hands enough to be employed. The port, though fallen into fo low and deplorable a condition, still retains a capacity of being made full as good, or better than ever it was, by removing those heaps of fand, which entirely choak the bason; repairing the breaches made in the old works; and, which is most material, by running a stone pier as far as the beacon, which would hinder vessels from being driven on the rocks at the entrance, and enable them to ride fafe in the harbour. The beach, continues the same gentleman, is as proper as any for drying cod and other fish in the best method; and if the port, become in a manner useless, was once put into a proper state, with these additions, the herring fishery, now no longer carried on, (as requiring better veffels than at prefent belong to the place) would be very foon retrieved. If one of the decayed edifices was converted into what in South Britain is called a Trinity House, of which captains of men of war coming thither occasionally, and experienced masters of thips

thips in any of the ports on the coast, might be members, with a power to examine and swear pilots, and to inspect the other harbours on this side North Britain, and the management of the fisheries, reporting annually their observations to the trustees, it would be of service to the place, and at the same time a benefit to the public. As the bay of St. Andrew's, from Fifeness to Redhead, is twenty-four miles in extent, and fhips in great danger from the winds at east or northeast, the restoring this, which is the only haven of any fize in that space, would be of general use to the trade of this part of Britain. At present it is considered as a creek to Anstruther, which is itself a member of the port of Kirkaldy.

From St. Andrew's we proceeded on to two very agreeable feats belonging to the present earl of Leven; one called Melvil, and the other Balgony. Melvil is a regular and beautiful building. Balgony is an ancient feat, formerly belonging to the family of Lefly; and if not built, was enlarged and repaired, by general Alexander Lest, noted for his services in Germany, under Gustavus Adolphus, king of Sweden; and at last, against

our king Charles I. and his fon.

The river Leven runs hard by the walls of the house, and makes the situation very pleasant. The park is large, but not well planted; at least, the trees

do not thrive.

From hence we went north to Cowpar, the shiretown, most pleasantly situated in a valley, upon the banks of the river Eden. It is surrounded with tall trees, which gives it a fine appearance at a distance. I turned to the north-east part of the country, to see the ruins of the famous monastery of Balmerinoch, of which Mr. Camden takes notice; but faw nothing worth observation, the very ruins being almost eaten up by time. The monastery was founded by queen Ermengred, wife of king William of Scotland. Here

Near it

overflo the bui The linen m all the it is the which t is navig and her England Here we came to the bank of another Firth, called the Firth of Tay, which, opening to a large breadth at its entrance, as the Firth of Edinburgh does, draws in afterwards, as that does at the Queen's-ferry, and makes a ferry over at the breadth of two miles to the town of Dundee; and then the Firth widening again just as that of the Forth does also, continues its breadth from four to fix miles, till it comes along to Perth, as the other does to Stirling.

As I design to keep in this part of my work to the east coast of the country, I must for the present quit the Tay, keeping a little on the hither side of it, and go back to that part of the country which lies to the south and east of Dunbarton, or Lenoxsbire; so drawing an imaginary line from Stirling-bridge, due north, through the heart of the country, to Inverness, which

I take to lie almost due north and fouth.

In this course I moved from the serry mentioned above, to *Perth*, lying upon the same Tay, but on the hither bank. It was formerly called Johnston, or St. John's Town, from an old church dedicated to the evangelist St. John, which is still remaining, and so big as to make two parochial churches, and can serve the whole town for their public worship.

Perth is the fecond town of Scotland for dignity. Near it flood anciently the town of Perth, which being overflowed by an inundation of the Tay, occasioned

the building of this where it now flands.

The chief business of this town at present is the linen manufacture; which is so considerable here, that all the neighbouring country is employed in it, and it is the wealth of the whole place. The Tay, over which there is here thrown a very noble stone bridge, is navigable up to the town for ships of good burden; and here they ship off vast quantities of linen for England.

In

In the heat of the war between the Bruces and Baliols, the English fortified Perth with good bulwarks; the greatest part of which the Scots afterwards demolished. It is feated in an hollow; but is nevertheless a neat little city, pleasantly situated between two green plains, which they call the Inches, and serve for bleaching their linen cloth. It has three very long streets, and many cross ones, with an old wall in ruins surrounding every side, but that bordered by the river.

The high country behind it affords plentiful patture to sheep and black cattle; and the Lowlands produce abundance of corn. When the fir woods, which are very regularly planted about Dunkeld, come to be felled, and the other improvements that have been made of late years, shall also be made known by their effects, the exports from Perth will be more

confiderable.

The falmon taken here, and all over the Tay, are extremely good, and the quantity prodigious. They carry them to Edinburgh, and to all the towns where they have no falmon, and barrel up great quantities for exportation: the merchants of this town have allo

a confiderable trade to the Baltic and Norway.

This town was for some time the seat of the rebellion in 1715; but, by a peculiar felicity, the townsmen got so much money by both parties, that they have ever since been enriched by it, as appears not only from particular families, but from the public and private buildings which they have raised since that time; particularly a new Tolbooth or Town-ball.

At Ardock in Perthshire are the remains of a Roman camp; and near Perth is a Roman way, where feveral medals, sepulchral urns, and other monuments of an-

tiquity, have been found.

From Perth, I went fouth to that part which they called Clackmanan, a fmall shire surrounded by those

North-eastward from Perth to Brechin lies a vale which they call Strathmore, esteemed the most fruitful in corn of all that part of the country: here are a great many gentlemens seats, though on the north-side of the Tay, particularly the noble palace of Glames, the hereditary seat of the family of Lyon earls of Strathmore.

It is one of the finest old-built palaces in Scotland, and by far the largest. When you see it at a distance, it is so full of turrets, and losty buildings, spires, and towers, some plain, others shining with gilded tops, that it looks not like a house, but a city; and the appearances seen through the long vistas of the park are so different, that you would not think it the same

house any two ways together.

The great avenue is a full half mile, planted on either fide with several rows of trees. When you come to the outer gate, you are surprised with the beauty and variety of the statues and busts, some of stone, some of brass, some gilded, some plain. The statues in brass are sour, one of king James VI. one of king Charles I. booted and spurred, as if going to take horse at the head of his army; one of king Charles II. habited like that in the Royal Exchange, London; and one of king James VII. after the pattern of that which is at Whitehall.

From hence I came away fouth-west, and, crossing the Tay below Perth, but above Dundee, came at last to Dumblain, a town pleasantly situated, on the banks of the river Allan; but without any sort of trade. It was made a bishopric by king David I. and the ruins of the bishops and canons houses are still to be seen; as are also those of a church of excellent workmanship. Dumblain was made samous by the battle sought be-

ween

tween the army of king George I. under the command of the duke of Argyle, and the Pretender's forces under the earl of Mar, on Sheriff-muir, between this

place and Stirling.

From hence I proceeded on in fight of Stirling-bridge; but, leaving it on the right-hand, turned away east to Alloway, where the late earl of Mar had a noble feat, and where the navigation of the Firth of Forth begins.

This fine feat was formerly called the castle of Alloway; but is now so completely modernised, that no

appearance of a castle remains.

The gardens of Alloway House are by much the finest in Scotland, consisting of about 40 acres of ground; and the adjoining wood, which is adapted to the house in avenues and vistas, above three times as much.

Here is an harbour where ships of burden safely ride. The Glasgow merchants have erected warehouses, to which they bring their tobacco and sugars by land, and then ship them for Holland, Hamburgh, the Baltic, or England, as they find the market.

The High-street of Alloway reaches down to this harbour, and is a very spacious well-built street, with rows of trees finely planted all the way. Here are several testimonies of the goodness of their trade, as particularly a large deal yard, or place for laying up all stores of Norway goods; which shews that they have a commerce thither. They have large warehouses of naval stores; such as pitch, tar, hemp, siax, two sawing-mills for cutting or slitting of deals; and a rope-walk, for making all sorts of ropes and cables for rigging and sitting ships, with several other things; which convince us they are no strangers to other trades, as well by sea as land.

East from Alloway, is a small county, called Clackmananshire, from the head burgh, and is part of Fife. The country is plain, the soil sertile: most of it proper for production with the production of the pr

neat a the witown. behind the lin ways l coalt.

The

part of

On this shore of the Firth, farther down, stands the neat and agreeable town of Culross, lying in length by the water-side, like Kirkaldy, being likewise a trading town. Here is a pretty market, a plentiful country behind it, and the navigable Firth before it. The coal, the linen manusacture, and plenty of corn, will always keep something of trade alive upon the whole coast.

The ruins of the abbey of Culross took my attention, part of which was turned into a stable; but the abbey has lately been repaired, and is possessed by the earl of Dundsnald. The remains of gentlemens seats of long standing, occur every where, in the erection of which houses, the builders shewed, that they studied duration preserable to conveniency. As I passed, I was continually comparing pass times with the present, in the former of which the grandeur of the prince, and the splendor of the sew noble samilies were supported at the expence of the people in general, who (the clergy excepted) laboured under the lowest degree of poverty, slavery, and ignorance; whereas now, our traffickers enjoy the fruits of their own labour and industry.

Here is a very noble feat belonging to the Bruces, earls of Kincardine, and is well worth a traveller's notice; and, indeed, these instances of magnificence are so frequent in Scotland, that were we to dwell upon each of them, such of our readers as know nothing of Scotland, would be apt to think we were too partial in its savour. But it is certain, that no gentry or nobility in the world formerly exceeded the Scots in noble

houses,

houses, and all manner of magnificence; as their families, for antiquity of descent, hardly have any equals in any country on earth.

Culrofs is a royal burgh in the shire of Perth, but in the confines of Fife, famous for a branch of the iron manufacture in making girdles, i. e. broad round plates, on which they bake their oaten cakes.

Having made this little excursion to the fouth from Perth, you may suppose me now returned northward again; and we proceeded to Scone, where almost all the kings of Scotland were crowned, fince the subduc-

tion of the Piets.

The celebrated wooden chair, with the stone in it, was brought away from hence, as is well known, by the victorious king Edward I. and placed in Westminster-abbey, where it now is; but the Scottish royal blood succeeding to the English crown, in the person of king James I. of England, and VI. of Scotland, verified the following prophetic diffich, though at the time it was accounted no fmall lofs and difgrace to the kingdom. The lines were thefe:

Ni fallat fatum, Scoti, quocunque locatum Invenient lapidem, regnare tenentur ibidem.

Thus translated by the Scots:

Unless old prophets fail, and wizards wit decay, Wheree'er this stone is found, the Scots shall reign for ay.

It is faid to have been first dignified by king Kenneth, who, having fought a bloody battle here with the Piets, in which he gave them a great overthrow, fat down to rest himself upon this stone, after he had been tired with the flaughter of the enemy; upon which his nobles came round him to congratulate his fuccess; and, in honour to his valour, crowned him with

could fkirn liam. of D

with a garland of victory; from whence he dedicated the stone to the coronation of all the future kings of Scotland, hoping from this omen, that they should, like him, be victorious over all their enemies.

But the better fort of Scots historians fay, their kings brought it from Ireland into I-Coln-Kill in the isles. and from thence to Scone or Scoon, when they had fub-

dued the Piets.

with

The palace of Scoon, though ancient, is not so much decayed as some of those I have already spoken of; and the Pretender, anno 1715, found it very well in repair for his use. Here he lived and kept his court, in all the state and appearance of a sovereign. He issued proclamations, created feveral lords, knights, and bishops; and preparations were made for crowning him: but as he had never, from his landing, gone into any Protestant church, though episcopal, as many of his adherents expected, but constantly performed his devotions with his priests after the Remish way; so he manifested such an invincible reluctance to comply with the usual form of the coronation-oath, that the ceremony, for which fome of the popish ladies had even pawned their jewels, was put off. An evidence, that the honesty of the man overcame the policy of the prince; and the greater, as the pope could have given him a dispensation, at pleasure, to justify any breach of the oath.

The building is large, the front being above 200 feet; it has two extraordinary fine square courts, befides others, which contain the offices, outhouses, &c. The royal apartments are spacious and large, but the whole building is entirely after the ancient manner.

From Scoon to Dunkeld, is so little a way, that we could not help vifiting it, being the place where a skirmish was fought between the forces of king Wilham, after the Revolution, and some of the viscount of Dundee's men, who purfued the king's forces, as

they

they were obliged to retire from Gillicranky, after lord Dundee himself had been killed there.

In one of my excursions, I went from Perth to Dun. keld; and never in any journey had I a more agreeable variety under my eye. We went over the hill, as they call it; but it ought to be faid hills; or rather mountains, as we should deem them in England. No fooner had we got over one, but another higher prefented itself for our next labour. Between, and upon the declivity of these hills, we had fir-woods all regularly planted: as foon as we descended from an hill, we were fure to meet with an agreeable river, which we heard before we faw it, the water tumultuously, as I may fay, rolling over large rock-stones, lying in every part, many of them above the water: the fides of the bank being frequently lined with the fame rocky fubstance, gives a swift motion to the water. These craggy stones lie so thick in some places, as to feem to threaten a stoppage to the stream; but a larger quantity of water being collected by them, it forces its way with a violent current; and making natural cascades, fills a person, disposed to contemplation, with agreeable fensations.

The pass into the Highlands is awfully magnificent: high, craggy, and often naked mountains present themselves to view, approach very near each other, and in many parts are fringed with wood, overhanging and darkening the Tay, which rolls with great rapidity beneath. After some advance in this hollow, a most beautiful knowl, covered with pines, appears full in view; and soon after, the town of Dalkeld, seated under and environed by crags, partly naked, partly wooded, with summits of a vast height.

We passed the river in a boat, and landed in the duke of Athol's gardens, which are extremely pleasing, washed by the river, and commanding, from different parts of the walks, the most beautiful and picturesque

posed chimin is for fmoke most what

views of wild and gloomy nature that can be conceived. Trees of all kinds grow here extremely well; and even fo fouthern a fhrub as *Portugal* laurel flourishes greatly. In the gardens are the ruins of the cathedral, once a magnificent edifice, as appears by the beautiful round pillars still standing; but the choir is preserved, and at present used as a church. In the burial place of the family is a large monument of the marquis of *Athol*, hung with the arms of the numerous connections of the family. In another part is a tomb of an old bishop.

On the other fide the river is a pleafing walk along the banks of the water of Bren, a great and rapid torrent full of immense stones. On a rock, at the end of the walk, is a neat building, impending over a most horrible chasm, into which the river precipitates itself with great noise and sury from a considerable height. The windows of the pavillion are formed of painted glass; some of the panes are red, which makes the water resemble a fiery cataract. About a mile farther is another rumbling brig, like, but inserior in

grandeur, to that of Kinrofs.

erent eque icws The town of Dunkeld is small, and has a linen manusacture, though not very considerable. Much company resorts here, in the summer months, for the benefit of drinking goat's milk and whey. I was informed here, that those animals will eat serpents, as

it is well known that stags do.

The Highland houses hereabout are very oddly built, and look most miserably and desolate, they being composed of clods of peat, stones, and broom. As to chimnies, they are little acquainted with them; there is sometimes a little hole lest open in the top, for the smoke to go out; other times it is in the end; and most frequently the door performs this office. Nay, what is more odd, in coming into this town, I saw in

one house a chimney made of a cart-wheel, and out of the hollow of the axle passed the smoke.

As to their way of living it is as odd, being chiefly on oatmeal, boiled up in various forms, with water, like hafty-pudding; we used to mix it with milk or ale. Their bread is oatmeal and water made into thin cakes. When oatmeal is dear, they make them of

barleymeal, and ale instead of water.

The common people have generally two apartments in their houses, by means of a slight partition; one end they lie in themselves, having a fire in the middle; and chaff of corn or heather is their bed; the other end is for their oxen, calves, &cc. which are exceeding small; a full grown ox is seldom bigger than one of our calves of a year old. The smell of the cattle's dung (which is generally very thick about the house), and their peat fire, I believe, keeps them in health, but not free from the itch, which is as common as their oatmeal; and even their better fort of people are rarely free from this malady, which they seldom mind to cure any other way than by their dumb music.

About 14 miles from hence is the famous pass of Gillicranky, noted for the fight between the viscount Dundee, and king William's forces. The mountains in its neighbourhood, on every side, seem to penetrate the skies. It is situated at the foot of a vast mountain, and is near a mile in length. The river Time divides it from mountains still higher, covered with woods. The road is narrow and dangerous, the river lying in a vast hollow running close to it. From these woody mountains slow streams of the purest water. The views and prospects around this pass are truly wonderful for their variety.

Upon the river Tay lies Errol, the feat of the earl of that name, chief of the ancient family of Hay, who derive their origin from a famous peafant, who in the

ie earl

y, who

in the

reign

Mr. Camden tells us, that the Firth of Tay was the utmost boundary of the Roman empire in Britain: That Julius Agricola, the best of generals, under Demitian, the worst of emperors, though he pierced farther, and traversed by land into the heart of the Highlands, yet seeing no end of a barbarous country, and no advantage by the conquest of it, withdrew, and here fixed the Roman eagles; and that he frequently harrassed the Pies by excursions and inroads, but always returned to his post here, making the Tay his frontier.

But our English Cæsars have outgone the Romans; for Edward I. as is said before, passed the Tay, and risled the abbey at Scoon; and, if we may believe history, penetrated into the remotest parts, which, however, I take to be only the remotest parts of what was then known to the English; for as to the Highlands, the mountains of Loguhabar, Ross, Murray, Sutherland, and Caithness, we read nothing of them. From these retreats the Scots always returned, Antæus like, with double strength, after every deseat; till, in the Vol. IV.

TO SCOTLAND.

next reign, they overthrew his fucceffor Edward II. at Bannockburn, and drove the English out of the whole country, following them over Tweed into England, and ravaging the counties of Northumberland and Cumberland.

Oliver Cromwell indeed (according to the motto of a noble house in Scotland, Rode Through) penetrated to the remotest part of the island; and that he might even literally rule it with a rod of iron, built citadels and forts in all the angles and extremes, where he found it needful to place his stationary legions, just as the Romans did; as at Leith, at St. Andrew's, at Inverness, Perth, Air, and several other places. We have since seen the forces of king George I. making the same route, nay, serrying over into the western and north-western islands; here again imitating the prudence of the old Romans, who employed their soldiery in amending roads, and making causeways over mountains, that were before thought inaccessible.

Where armies have marched, there is room enough, no doubt, for travellers. With this affurance there-

fore, we chearfully croffed the Tay.

We left Strathern, with the little country of Mateith, for our return; and went down into Angus to Dundee, a pleasant, large, populous city, which, as it stands well for trade, has as large a share of it, as most towns in Scotland, and that as well foreign as domestic.

It is exceeding populous, full of stately houses, and large handsome streets; particularly four very good ones, with a large market-place in the middle, the largest and finest in Scotland, except that of Aberdeen.

The inhabitants have a very large correspondence with England, and ship off a great deal of linen there; and a great quantity of corn is sent from hence to England, as well as to Holland. They have like wise a good share of the Norway trade; and as the are concerned in the herring sistery, they consequent

ly have fome east country trade, viz. to Dantzick, Konigsberg, Riga, &c. They send ships also to Sweden, and import iron, copper, tar, pitch, deals, &c. from the several trading ports of that kingdom.

The country behind them, called the Carse, or the Carse of Gowry, with the vale of Strathmore, abounds in corn, which the port of Dundee ships off in large quantities, when a crop allows it, to the great advantage of the gentlemen as well as farmers; for as the gentlemen receive all their rents in kind, they would find a great difficulty sometimes to dispose of it, if the merchants here did not ship it off, either for London

or Amsterdam.

The town of *Dundee* stands at a little distance from the Tay; but they are joined by a causeway or wall, well paved with slat free-stone, and rows of trees are planted on either side of the walk, which make it very agreeable. On one part of this walk are very good warehouses for merchandizes, especially for heavy goods; and also granaries for corn, of which sometimes they have a vast quantity laid up here; and these, being near the harbour, are convenient, as well for the housing of goods, when landed, as for the easy shipping off what lies for exportation.

They are famous here for their thread manufacture.

Dundee was stormed and plundered of great riches,

by Cromwell, and the English army.

Here is a new church, built in a style that does credit to the place, and which shews an enlargement of mind in the Presbyterians, who now begin to think, that the Lord may be praised in beauty of holiness. There is not a relique lest of the ancient castle; but its scite may be found where the Lion inn now stands.

It was the birth-place of Hellor Boetius, the Scots historian; a man famous in his time, and whose work was anciently more in esteem than of late. It gave the title of viscount to Graham of Clavers, who

Near to Dundee, in the mouth of the river, lies Brochty-craig, noted for a noble falmon-fishery in its neighbourhood. It was formerly fortified, and defended by a garrifon of English for many months to.

gether.

It is 20 Scots miles from Dundee to Montrole, the way pleasant, the country fruitful, and filled with gentlemens houses. Among these is the noble palace of Panmure, forfeited in the rebellion of 1715, by the unfortunate earl of that name, who was wounded in the fight near Dumblain. The furname of the family is Maul; and Maulsburgh, a small town near Montrole, is called from it.

The town and port of Montrole, i. e. the Mount of Roses, was our next stage, standing upon the eastmost shore of Angus, open to the German or the Caledonian ocean, and at the mouth of the little river of South-ER,

which makes the harbour.

This town is well fituated for trade, and has a good harbour, and the inhabitants always carried on an ad-

vantageous trade with Norway.

vantageous trade with Norway.

The Annat fands, after violent storms from the east, approach nearer to the Ness; but are again removed to their old limits by the flood of the Esk, i with all circumstance to be attended to by mariners. The tide rushes up this entrance with a great head and value fury; but the depth of water is considerable, being fix fathoms in the middle, about three days before spring-tide. The breadth is scarcely a quarter of a mile, but the bason instantly expands into a beautiful circle of considerable diameter; but unfortunately most of it is dry at low water, except where the South Esk forms its channel, in which vessels of 200 tons will float even at the lowest ebb. will float even at the lowest ebb. The

The town is adorned with fine buildings, and has an hospital for the poorer inhabitants. It consists of one long street, and another shorter, at the end of it. The street is broad and well paved; and here is a pretty good kirk. It gives title of duke, as it did formerly of earl and marquis, to the chief of the ancient

and noble family of Graham.

The French fleet first made land at this port, when they had the Pretender on board, in the reign of queen Anne, having over-shot the mouth of the Firth so far, whither they at first defigned; but this mistake, which fome thought a misfortune, was certainly a deliverance to them; for as on one hand it gave time to the English fleet to come up with them before they could enter the Firth, so it left them time and room also to make their escape; which, if they had gone up the Firth, they could not have done, but must inevitable have been burnt and destroyed, or taken, by the British fleet under Sir George Byng, which was fuperior to them in force. He landed on the 22d of December, 1715, with about 100 gentlemen and officers, and a confiderable fum of money. The epifcopal clergy addressed him, and so did the magistrates; and, next day, the earls of Mar and Marshal went

and, next day, the earls of Mar and Marshal went from Perth to meet him. On the 6th of January following, he made his public entry into Dundee, Esk, a with about 300 men on horseback; as he did on the 9th into Perth.

The opth into Perth.

The royal burgh of Aberbrothock on this coast, besides being famous for the stately ruins of the greatest abbey in Scotland, deserves to be mentioned for its ter of a convenient situation for trade; which induced, some eautiful years since, the inhabitants to lay the soundation of a new harbour, the old one being so decayed, that it was hazardous even for small vessels to fail into it.

The glory of this place was the abbey, whose very tuins give some idea of its former magnificence. It

lies on a rifing ground above the town, and prefents an extensive and venerable front; is most finely fituated, commands a view of the fea to the east, of a fertile country to the west, bounded by the Grampian Hills; and, to the fouth, of the openings into the Firths of Tay and Forth.

Here also is a famous mineral water, much frequented for its virtues in curing divers diseases. It is a very neat but small town, and pleasantly situated. Its chief manufacture is thread; and here are several mills for winding it, of curious contrivance, refembling those at Derby. The thread made here passes for

Dundee thread, the most noted in Scotland.

In the inner parts of the shire, to the westward, is Forfar, the county-town, and Brechin, formerly a bishop's see, made so by king David, and where some part of a small cathedral is still standing. Its castle, which belonged to the earl of Panmure, is fituated exactly like Warwick Caftle in England, and is very well kept with terrace-walks cut out of the rock down to the river. This palace has a greater air of grandeur than Panmure, and belongs now to the York Buildings

company.

Brechin is feated upon the river South-Esk, over which it has a stately bridge of two arches, and is confiderable for its falmon and cattle markets. It is also memorable for a great victory obtained here over the Danes, by the chief of the family of Keith, earl Marshal, who, having killed their general, was advanced to great honours by Malcolm II. There was a high stone erected over the grave of the Danish gene ral, which is still called Camus's Cross, from his names and at ten miles diftance is another crofs, over the grave of another eminent Danish warrior; and both a them have antique letters and pictures upon them.

From Montrose the shore lies due north to Aberdent trenches in the way is the castle of Dunnoter, once a strong

On th

fortification upon a high precipice of a rock. earl Marshal, of the name of Keith, was lord of this castle, as also of a good house near it called Fetteresso, and a great estate: which was forfeited, by his joining the earl of Mar in the rebellion of 1715. His lordship making his escape, went in the service of Spain. His brother, going into the service of Russia, made fuch a figure there, that he was deemed one of the best generals in Europe; and, entering into the king of Prussa's service, was preserred to the first military honour, that of velt marefchal, and fell in it, to the inexprehible regret and loss of his royal master.

Dunnoter castle is now demolished. It is situated in the shire of Kincardin, called the Merns. county is noted for its timber, having in it upwards of five millions of fir-trees, belides vast numbers of other kinds, planted within these 80 years by the gentry, at and about their feats, and which they are yearly adding to, and improving. Kincardin was formerly the county-town: but that advantage now, by statute, belongs to Stonebive, or Stonebaven, a small fea-port town, lying quite in a hollow, fo that we

did not see it till we were ready to enter it.

Innerberary, on the coast, was made a royal burgh by

king Alexander III.

1 Strong ification

m.

Paldykirk, fo called from Palladius, first bishop of the Scots, is noted for its annual three days fair: the principal commodity brought to it is coarfe cloth, which is commonly transported to the Netherlands. These towns, being situated by the sea-side, and having generally a little river or inlet of the sea to water them, cannot fail of affording pleasant habitations. Most of the little villages about them support themselves by fishing and smuggling.

On the lands of Arduthie and Redcloak, are some trenches to be feen, cast up by the Danes at one of . 14 their

their invasions: and round the hill of Urie is a deep

ditch, where the Scots encamped.

Fordun lies also in this county, famous in ancient times for the reliques of the aforesaid St. Palladius. It is also noted for being the birth-place of John de Fordun, the Scotch historian, author of the book called the Scots Chronicon, to which all succeeding historians of this nation have been much obliged.

From Stonebive to Aberdeen is twelve short miles. Within four or five miles of that city, we have a very bad country, the land producing nothing but peat, even to the very city: but the road is paved, or, in

bad weather, it would be impaffable.

About two miles before we enter Aberdeen, we have a stately bridge of stone, consisting of seven arches, over the Dee, built by the celebrated Gawin Dunbar, bishop of Dunkeld, which leads into the shire of Aberdeen.

We then travel along the banks of the river, and have a fine prospect of New Aberdeen, situated almost

close to the sea-side.

It flands at the mouth of two rivers, and is divided into two towns or cities, one called the New, the other the Old Aberdeen, about a mile distant from each other; one situate on the river Don, the other on the river Dee, from whence they are more properly called Aberdon and Aberdeen.

Aberdon, or the Old Town, lies a mile northward from Aberdeen, or the New Town, which is sometimes called Bon-accord from its motto. It is situated in the mouth of the river Don, which is remarkable for the multitude of salmon taken in it. Over the river Don is a bridge only of a single arch, sustained on each side by a rock, and is a most noble and surprising piece of workmanship.

Old Aberdeen was formerly the bishop's seat, and has a cathedral, commonly called St. Machar's, a large

The church and steeple are built of hewn stone, and the summit of the latter resembles an imperial crown. The windows of the church were formerly esteemed for their paintings, and something of their splendor still remains. In the steeple are two bells of extraordinary bigness, besides others.

Close to the church is a library, well furnished with

books.

This college was founded by bishop Elphinston, in the year 1500, and the greatest part built by him; but king James IV. taking the patronage upon him, it was called the King's College. The bull for it was procured from Pope Alexander VI. in 1494, endowing it with as ample privileges as those of Paris and Bononia.

There are in this college a principal, a sub-principal, who is also one of the regents, three other regents, prosessors of philosophy, a professor of humanity or philosophy, a professor of divinity, a doctor of physic, a professor of the oriental tongues, a professor of the civil law, and a professor of the mathematics. Dr. Fraser has lately been a great benefactor to it.

New Aberdeen is about a mile distant, as we have said, from the Old, situated at the mouth of the river Dee. It is the county-town, and by consequence the seat of the sheriff's courts. It exceeds all the cities in the north of Scotland for largeness, extent, and beauty. It stands in a wholesome air, has a great revenue from its salmon sistery, and the inhabitants are generally very courteous. It stands upon three hills, the main part upon the highest; and the skirts of it extend

into the plain. The houses are neatly built, generally four stories high, or more, and have for the most part gardens and orchards belonging to them; which make the city pleasant and healthful, and the prospect of it beautiful at a distance.

From a round hill, at the west-end of the city, slow two springs, one of clear water, and another with water which, in taste and quality, comes very near the Spa in Germany: Dr. William Barclay wrote a treatise

concerning it.

In this city stands the Marshal College, founded by George earl Marshal, in the year 1593, to which the city has added many buildings at their own charge.

In this college, which is a distinct university of itfelf, are a principal, four professors of philosophy, a professor of divinity, a professor of mathematics, and a professor of the oriental languages; and there is lately added a professor of physic. It has a good library, which was founded by the city, enlarged by the gifts of several learned men, and surnished with mathematical instruments*.

In this city is also a grammar-school, founded by Dr. Dunn, having one master and three ushers.

There is also a music-school.

The church called St. Nicholas's is an handsome edifice of free-stone, with a losty steeple, resembling a pyramid: it is divided into two churches; but that to the west, being in a ruinous condition, was pulled down, and a very handsome one of free-stone erected on its scite; Mr. Wyllie of Edinburgh being the architect.

The

By the forfeiture of the ear! Marifeball's effates, the prefentation to all the professormers becomes vested in the crown, except the mathematical, which being instituted by the town of Aberdeen posterior to the attainder of lord Marifeball, claims the corporation for its patrois, who generally dispose of it to him, who, on the issue of a competition, shall prove himself the most deserving candidate.

Here is also a prison and a workhouse belonging to the town, likewife an alms house, and a very excellent hospital founded by Mr. Robert Gordon, in which about 40 boys, the fons of decayed merchants and tradefmen, are completely educated, cloathed, and maintained, and, at proper age, apprenticed or otherwife provided for, as their genius points. Near the harbour stands the custom house. The market-place is beautiful and spacious, and the streets adjoining are very handsome; most of the houses are built of stone, four stories high, with handsome fash-windows, and are well furnished within, the citizens here being as gay, as genteel, and perhaps as rich, as in any city in Scotland. In the year 1739, an infirmary was erected here; fince which, two wings have been added to it: the whole is supported by the voluntary contributions of the inhabitants of town and country. In the year 1766, upwards of 700 patients were taken in, who were treated with the greatest humanity. In this infirmary the operation of lithotomy has been introduced with the greatest success, by Dr. Thomas Living stone, fellow of the Royal College of Phylicians at Edinburgh.

Here

The bridge at Old Aberdeen, over the Don, confifts of one immense arch of stone, sprung from two rocks, one on each side, which serve as a butment to the arch; so that it may be said to have a soundation coeval with nature, and which will last as long. The other bridge is upon the river Dee, a mile to the west of New Aberdeen; and has seven stately arches. The streets are paved with a fort of slint and peebles.

Great numbers of the people of Aberdeen, and indeed of almost all this county, are of the episcopal perfusion; so that, were it not for the legal establishment, the Presbyterian preachers would have but sender incomes: at Aberdeen and Peterhead they have beautiful chapels, and organs. There are in this place two meeting-houses of the English church, viz.

1 6 St. Paul's

180 S.C.O.T.L.A.N.D.

St. Paul's chapel, and the Trinity-church: two of the nonjurors, under a titular bishop of Aberdeen; two of the Roman Catholics; one of the Seceders, or Diffenters from the established kirk, who have lately erected a very large and convenient place of worship contiguous to the church of St. Nicholas; one of the quakers; and one of the independents. The methodift principles have spread thus far: in the year 1765, they erected an handsome octagon chapel here, and

have a confiderable auditory.

The air of this country, to those who were born in a warmer, feems cold : but is in itself healthful and temperate. The winter is milder than can be expect. ed from fuch a climate; which feems a wonder to Danes, Poles, and Prussians, when they come into this country, and confider that, with them, during the winter, there is nothing but perpetual frost and fnow, The foil in general is not unfruitful, if duly cultivated; it produces wheat, rye, barley, oats in abundance, peas and beans; nor do they want roots and herbs for food and physic; and foreign plants grow very well there, as daily experience testifies. The mountainous part of the country affords very good pasturage, and the other as good corn.

The adjoining fea not only furnishes them with plenty of fish, but reproaches them with their negligence, when they see the Dutch sleets continually sishing on the coasts, from whence they reap great gain; but it is the humour of the inhabitants to apply themselves to the salmon-sishing, and to neglect that of all hands.

other forts.

The quantity of falmon taken in both rivers, is a pickled, kind of prodigy. The profits are very confiderable chiefly the falmon being fent abroad into different parts of the ships, a world, particularly into England, France, the Baltin, on very and feveral other places. The

They

on very

The falmon, a fish unknown to Pliny, (unless it were the elox of the Rbine), as it is to this day in all parts of Italy, breeds in autumn, in little rivers, and mostly in shallows, where they cover their spawn with fand; at which time they are so very poor and lean, that they are scarce any thing but bones. Of that fpawn, in the fpring following, comes a fry of small fish, which, making to the fea, in a little time grow to their full bigness; and then making back again to the rivers they were bred in, struggle against the force of the stream; and, whenever any height obstructs their passage, they will with a jerk of their tail (cum faltu, from falio, to leap, whence probably they have the name of falmons) whip over, to the amazement of the spectators. In these rivers they keep themfelves till they breed, during which time there is a law against taking them; which is from Sept. 8, to Dec. 1.

The

The herring-fishing is a common bleffing to all this shore of Scotland, and is like the Indies at their door,

were it properly used by the Scots in general.

They have also a very good manufacture of linen. and likewise of worsted stockings, which they fend to England in great quantities, and of which they make some so fine, that I have seen them fold for 14, 20, negli- and 30 shillings a pair. They also fend them over to y fish. Holland, and into the north and east seas, in large gain; quantities. The persons who knit them get 25 and them 25.6d. per week, and often much more, if good hands.

They have also a particular export here of pork, rs, is a pickled, and packed up in barrels, which they fell derable chiefly to the *Dutch* for the victualling their *East India* so of the ships, and their men of war; the *Aberdeen* pork having the reputation of being the best cured, for keeping

on very long voyages, of any in Europe.

They

They export also corn and meal: but they generally bring it from the Firth of Murray, or Cromertic, the corn coming from about Inverness, where they

have great quantities.

In a word, the people of Aberdeen are universal merchants, so far as the trade of the northern part of the world will extend; and it may be esteemed the third city in Scotland, that is, the next after Edinburgh and Glasgow.

Here is great plenty of a sea-weed called dulse, which the poor pick off the rocks, and sell about the town every day. It is eaten sometimes by itself, and

fometimes with vinegar.

This shire contains in it Mar, with its appurtenances, Birse, Glentaner, Glenmuick, Strathdee, Strathdon, Braes of Mar and Gromar, most part of Buchan,

Formartin, Garioch, and Strathbogy.

The latter is a large and ancient barony; it was erected into an earldom by king James VI. in favour of the chief of the noble and ancient family of Gorden, whom he afterwards created marquis of Huntly. Stratbbogy is very fruitful in corn and pasturage, and is remarkable for the fine linen-yarn spun by the women there, and sold to the merchants.

It is mostly inhabited by Gordons, vassals to the duke of Gordon, who has a magnificent castle here, called Stratbbogy, from the name of the county. There were of this name, besides the duke, the earls of Sutherland, Aboyn, Aberdeen, and late viscount of Kenmure; likewise a great many gentlemen of note in

other parts of the kingdom.

The village of Strathbogy is mean and small; yet it had a nonjuring meeting-house when I was there, and a kirk and tolbooth. The small trade they have is in linen cloth, which is chiefly carried on by an Irishman, who brought this manufacture to great perfection there. At a small distance from this town is Huntley.

Huntley-cossle, which gives title to the marquises of that name, of great antiquity; but in ruins. Some of its apartments are entire, and there are to be seen very ancient history-paintings on their ceilings.

A small distance from this castle is a large stone building, which belonged to Hamilton, the rebel-governor of Carlisse, in 1745, and where he dwelt before he entered into the rebellion. This town and castle stand in a vast plain, and the mountains round them are so regular, that one would think art, and not nature, had placed them there.

Strathbogy is a very proper name for this village, the ground all around it being marshes and bogs. The river Deveron runs round one side of the town; the Bogie surrounds the other, and joins the Deveron; and both abound with trouts.

About four miles from Strathbogy, I passed by a feat of the lord Bracco, now earl of Fife, called Rothiemay.

About a mile farther on the fame fide, and upon a more rifing ground, is an ancient house, the seat of one Abernethy, called laird of Mayne. I thought it the pleasantest situation I had ever beheld; for hence you have a full view of the serpentine windings of the charming river Deveron. The late proprietor was obliged to pass the concluding part of his life abroad, being charged with the murder of a very worthy gentleman, Mr. Leith of Leith-hall.

In Aberdeenshire are quarries of spotted marble, and late; and pearls are found in their rivers, of a large

lize, and fine colour.

There was formerly a mint at Aberdeen, as appears by several pieces of coin, with the Aberdeen upon them, tept in the cabinets of the curious.

Other towns in this county are:

1. Kintore, a royal burgh on the Don, which gives he title of earl to a branch of the family of Keith.

2. Peterbead, with a good harbour.

3. Inverary

3. Inverary, made a royal burgh by king Robert Bruce, in memory of a victory he obtained there. It is a small town, but very pleasantly situated upon the river Don; and sheltered with trees on every side.

I ought not to omit Inverury, belonging to Garisch, in Aberdeenshire, being the Scotsman's boast, for here Robert Bruce, though sick, and carried in an hose-litter, defeated John Cumins, and those who adhered to him, in savour of Edward I. of England, who held Scotland in subjection. This was the first victory king Robert obtained, and laid the soundation of the overthrow of the English usurpation in Scotland. Near the the same place also, in 1411, Alexander Stuart earl of Mar, defeated Donald of the Isles, in the bloody battle of Harlaw.

From Aberdeen the coast goes on to a point of land, which is the farthest north east part of Britain, and is called by the sailors Buchanness, being in the shire or county of Buchan, part of which belongs to Aber-

deenshire.

On the fouth-side of the water of Eugie stands Peterhead, with a road, which will hold 100 sail of ships; and at this place it is high-water when the moon is directly south. In many places of this ship are great stones placed circularly, one of the largest in the middle towards the south, which have the air of places of worship in the ages of heathenism.

The dropping cave of Slanes is very remarkable; of the petrified substance whereof is made excellent

lime.

In the month of October, 1752, as some quarries were digging for lime-stone, near Collistown in the parish of Slanes, they discovered a cave of the same nature, but a more curious form, and easier of access than the samous dropping-cave above mentioned. The stone is very white, and hangs down in a great number of small tubes, resembling icicles, over a barnumber of small tubes, resembling icicles, over a barnumber of small tubes.

This county, however remote, is full of nobility and gentry, and their feats are feen even to the extremest shores: the family of Fraser carries its name to Fraserburgh, in the very northermost point of the country. Erskines, earls of Mar, had their familyfeat at Kildrummy, in the county of Mar, a little fouth of this part of the county, where the late unhappy earl first fet up his standard for the Pretender. The Hays, earls of Errol, are in Buchan; and the family of Forbes lord Forbes, and Forbes late lord Pitsligo, are still farther, and the latter on the very shore of the Caledonian ocean. The Gordons and Keiths are very numerous also in these parts.

From hence the east shore of Scotland being at an end, the land trends away due west; and, the shire of Banff beginning, you see the towns of Banff, Elgin, Fraserburgh, and the famous monastery of Kinloss, where the murdered body of king Duff was after many years dug up, and discovered to be his by va-

rious tokens.

The shire of Banff deserves some notice for the following particulars; for that in it is fituated Strathuarries ya, which drives a great trade in lime and tat in the cattle; and it abounds fo with lime-stone, that they he same build their houses with it. They carry on a trade in faccely fine linen, also, by means of their weekly markets at mitioned Kinth, a neighbouring village, which has nothing reagrest markable, but an exceeding high and steep stone bridge of one arch, over a pleasant branch of the river Deveron; close to which I faw a mighty rock. stone, which makes a part of the foundation of the bridge. It was on a Sunday when I passed by here; and stopped at the post house for refreshment, but could have nothing but an egg or two, with some wine, or thick Scots ale; it being a custom, through many parts of Scotland, to eat only an egg, if any thing for dinner, and to have an hot supper; for their feeming strictness in religion will not let them do any labour, even fo much as dresling a dinner for themselves or travellers, although they have fowls and other meat in their house, till night, when Sunday is

Upon the banks of the Spey, which runs through this county, lies the Boz of Gicht, now called Gordon. Caftle, the noblest palace in the North, being the duke of Gordon's chief feat, and adorned with pleafant gardens, a great park, and fine canal, with an agreeable fountain and statues. The castle appears so large, that it looks more like a town than a nobleman's The duke is proprietor of this part of the Strathaven is the paternal inheritance of his family, and his grace has a fine estate, and other seats The late duke had a little embroiled hereabouts. himself with the affairs of 1715, and his son, then marquis of Huntley, still more; but got off without a forfeiture, by his prudence and good fortune.

The town of Cullen, an ancient royal burgh, stands in the shire of Banff. It is chiefly noted for its fruitful foil, and falmon-fishing; for, having no post, it has little trade, except for its corn and falmon. At the entrance of this town is a noble feat of the earl of Finlater; which was plundered by the rebels in 1745.

Fochabers is a town lying in the hollow, close w the banks of the Spey, and chiefly confifts of one ftreet, a mile long, in the middle of which is a tolbooth lately erected; but generally the houses are

The shire itself takes name from Banff, a burgh royal, seated at the mouth of Deverne, or Doveron, in the Boyne, where the sheriff holds his courts. In it are the ruins of an old castle; near which is the abbey of Deer, formerly belonging to the Cistercian monks, and sounded by William Cumin, earl of Buchan. In Belvenic is found the stone of which alum is made; and in the county of Boyne great quarries of spotted matble have been discovered.

Before we can enter the town of Banff, we are obliged to ford the Deveron, which is a very broad river. On its banks we have a fine prospect of the town: adjoining to which, is a grand modern building of the lord Bracco, now earl of Fife, of the kingdom of Ireland. I thought it was the finest piece of architecture I had feen in Scotland; but, what is a great misfortune, the infide is not finished, so that nobody lives in it; which was occasioned by a lawfuit between the late lord Bracco, and his architect, about a crack in the building; but the architect getting the cause, so grieved lord Bracco, that he abandoned this noble pile, and lived amongst the mountains near Strathbogy, quite a recluse place, and diftant from company. This building at Banff is very high, square, and full of columns of noble architecture on every fide; it has also towers at every corner, and others in the middle. The river Deveron runs close by the intended gardens; and upon it are some fmall islands, where he has built agreeable tummer-houses, &c. Banff is a neat town, confishing of two long streets, and several short ones; there are also some neat buildings in it, and two small harbours for shipping; but large vessels cannot come near them. After leaving Banff, we have sine views, travelling along the fea-coast, of the rising mountains near the Firth of Cromertie, but at a vast distance.

Portfoy is a neat village, fix miles from Banff, the fea coming into the town; confequently it affords plenty of fish, as its numerous black rocks do vast quantities of dulfe, and other fea-weeds, which we diverted ourselves with gathering and eating.

Buchan is part in Aberdeenshire, part in the shire of Banff: one of its principal towns is Fraserburgh, and Peterhead is another. The latter is a good market. town, with a port and small harbour, with two little piers for fishing; but, being so near Aberdeen, has not those advantages, that might be otherwise probably be given to it: fo that at low-water it is all dry, and the smallest ships lie a-ground in it.

The lord Saltoun built (in the year 1738) at Fraferburgh, an excellent new pier and bulwark, all of free-stone; which render that harbour as safe and commodious as any on the east-coast; so that 30 ships may winter there at once, with great fafety: the water at full fea is 18 or 20 feet.

From the point of land, called Buchanness, the thips begin their accounts for their feveral voyages; what they call their departure: as in England they do from Wintertonness, on the north-east part of Norfolk, and from the Downs for the voyages to the fouthward.

From Fifeness, which is the northermost point, on the mouth of Edinburgh Firth, being the fouthermost land of Fife, to this point of Buchanness, the land lies almost due north and south, and the shore is the eastermost land of Scotland. The distance between them is 33 leagues 1 mile, which is just 100 miles; though the mariners fay, that, measuring by the sea, it is but 28; and from Wintertonnefs, near Yarmouth, 10 Peterhe this point called Buchanness, is just 300 miles.

The river or Firth of Tay opens into the sea, about land, be four leagues north from Fifeness; and as there is

Buchanness is generally also the first land of Great Britain, which the ships make in their voyages home from Archangel in Russia, or from their whale-fishing voyages to Greenland and Spits-bergen in the North feas: and near this point, at Pitfl go, a great ship was cast away in queen Elizabeth's time, bound home from Archangel, having on board the first ambassador sent by the great duke of Muscovy to any of the Christian princes of Europe, he being commissioned to treat with queen Elizabeth for a league of peace and commerce. He likewise lost a most valuable present, defigned for the queen, of rich costly furs, in those days reputed inestimable. The ambassador was happily faved, and brought on shore, by the people of Pitslige; but the ship and all the goods were lost.

From this point of easterly land, all that great bay, or inlet of the fea, reaching quite to the north of Scotland, is called Murray Firth; and the northermost point is Dung sbyhead, which is the north-east point of Caithness, and opens to Pentland Firth. By Pentland nermolt Firth you are to understand the passage of the sea be-and lies youd Caithness, between Scotland and the isses of Orkthe eaf- ney. What is called Murray Firth, is not, like many others, the mouth of a river, as that of Edinburgh or though Tay, but is an open bay in the sea, as the Bay of a, it is Biscay, or the Gulph of Mexico, are; and reaches from peter head to Dungsbyhead, opposite to the Orkneys, the distance of 79 miles; but it is almost twice as far by a, about and, because of the depth of that bay, which obliges

us to travel from Pitfligo west, near 70 miles, till we

come to Inverness.

This county of Buchan is more to be taken notice of from what is to be feen on the fea-shore than in the land; for the country is mountainous, and in some places not very fertile; but as we coasted along west, we came info a much better country, particularly the shires of Banff, Elgin, and the county of Murray, from whence the bay I just now described is called Murray Firth.

Murray is a pleafant country, the foil fruitful, watered with fine rivers, and full of good towns, and gentlemens feats, more than could be expected in fo

remote a part of the kingdom.

This country is a plain for between 20 and 30 miles together, and the foil is by that means rendered more fruitful and rich, and the temperature of the air more fostened, than in other parts of Scotland; insomuch that the harvest here, and in the vale of Strathbogs, and all the country to Inverness, is observed to be island, more early than in Northumberland, nay, than in melting Derbyshire, and even some parts of the more southerly inconsi counties in England; as particularly in the east of Kent and, by and Sussex. As a confirmation of this, I affirm, that I have seen the new wheat of this country, and Inverness, brought to market to Edinburgh, before the wheat at Edinburgh has been fit to reap; and yet the harvest about Edinburgh is thought to be near as forward as in many parts even of England itself. In a word, it is usual in Murray, and the country about it, to begin with their harvest in the month of July; and it is not very unusual to have new corn fully ripe, and Near threshed out, shipped off, and brought to Edinburgh to fale, within the month of August.

The common drink in these parts is ale, and fometimes beer; and they have good French wint very cheap, as I and my company experienced; but

the in ing f than felves a bott Murr witho

called Nairn The

Th

of tha person Nai We er

arch. and, to bourho wished

of free-Tarno

s an old ray.

the inhabitants prefer aqua vitæ of their own extracting from ale-dregs and spices, to much richer wines than the French: of this they drink plentifully themfelves, and are very liberal of it to their friends. And a bottle of this liquor, and some cheese, will make a Murray man undertake the longest winter journies, without wishing for any other provision.

This country is divided into two shires; the greater. called the shire of Elgin; the other, the shire of

Nairn.

ed; but the

The town of Nairn lies on the mouth of the river of that name; along which stand the seats of many

persons of quality.

Nairn is a royal burgh, and a fea-port town. We enter the town over a noble stone bridge of one arch. The port is capable of receiving small vessels; and, though there are very fine woods in the neighbourhood, yet they turn to less profit than could be wished; and therefore here, if any where in this island, furnaces might with propriety be set up for melting the iron ores, of which there are said to be no inconsiderable quantities within a reasonable distance; and, by this means, even the loppings of these woods would be rendered of more value than the woods themselves are, as things now stand.

Eight miles from Nairn, and four from Inverness, is Culloden-Moor, which takes its name from the feat
of the late lord prefident Forbes, who was fo active in
the suppressing of the rebellion in 1745, and which the suppressing of the rebellion in 1745, and which boutit, will be for ever memorable on account of the utter y; and defeat of the rebel army there, which put an end to it.

Near the castle of Calder, on that river, is a vein

linburgh of free-stone, and many figns of copper.

Tarnaway castle, on the river Findern, in this county, e, and san old castle and seat belonging to the earls of Murray.

A little

A little lower on the other fide, stands the burgh of Forres; and lower, formerly, stood the noble ab.

bey of Kinloss, before mentioned.

At and about Forress are good roads, and fine prospects, especially over the sea, with the shipping in Findorn harbour, a small sea-port, four miles diftant from Forress. This burgh of Forress is pleafantly fituated at the end of feveral ridges of mountains, and is made up of one long street, with a kirk and tolbooth, and the ruins of an old castle, in which, it is faid, the kings of Scotland used to reside. Here are gardens to every house, very agreeably situated, and

much regarded by the inhabitants.

Just before we entered this town, on our right, hand, we were presented with the fight of a flat square pillar of stone, which rifes about 23 feet in height above-ground, and is, as the inhabitants of Forth informed me, no less than 12 or 15 feet below, h that the whole height must be about 35 feet, and in breadth near five; it is all one entire stone: great variety of hierogliphic figures, in low relief, and carved thereon; some of which are still distinct and visible; but the injury of the weather has obscure those towards the upper part. What the imports fignification is, I could hear of none that could infom The whole above ground is divided into fever compartments, the lowest of which is almost hid b fome steps, or supports, lately made to secure it from falling, at the expence of the counters of Murra The second contains fundry figures, but most of the defaced. In the third are several of a monstrous form resembling four-footed beasts with human heads, an others of men standing by them. In the fourth din ag in the fion, are fix or feven enfigns or standards, with som figures, holding obscure weapons in their hands. The fifth and fixth divisions are filled with the like figure and in the uppermost of all have been others, which

are fide whi tion nun and rifhe

are now in a great measure defaced. On the reverse fide of this stone is the figure of a cross; beneath which are two human figures, of a very disproportionable and Gothic form; and indeed the whole monument, as to its sculpture, is executed in a rude and barbarous tafte: on its edges are continued flourithes. The inhabitants here told us, it was erected as a monument of a Danish king; some say, slain in battle here; others, that he died at fea, and was brought hither, and buried; others, that it was for a South king, &c. But Camden tells us it was erecled as a monument of a victory obtained by king Malcolm Mac-Kenneth over Sweno king of Denmark.

In this rich county, on the river Loffie, which rifes a few miles above it, and empties itself into the fea a

mate-Kenneth over Sweno king of Denmark.

In this rich county, on the river Losse, which rises a few miles above it, and empties itself into the sea a few miles below it, lies Elgin, formerly a bishop's see. It is fituated in a very fruitful soil, though somewhat sandy. The usual place of residence of the bishop was at the castle of Spynie, within a mile of the town a very noble seat, with sine gardens and woods.

Though the town of Elgin has reason to be proud of its situation, it was not very rich in its revenues; for it had long laboured under heavy and burdensome debts; which, being increased by the rebellion in 1715, put a stop to many of its new public works, and made several others run into decay. At the same time the river Losse having very insufficient anks, the channel of it became choaked with sand, Murray which made it subject to overslow; and, moreover, to other heavy of Elgin, lying not far from it, became ruinous and decayed, to the great prejudice of persons trading in the Murray Firth, as well as to the town.

Elgin is a royal burgh. It consists of one very one street, and several shouter, having a neat church a the middle. The houses are almost all built upon riches, which, with their intermediate pillars, form vol. IV.

agreeable piazzas, and ferve to defend the inhabitant from the effects of rain, wind, or fun. It is also noted for the ruins of one of the most stately cathe. dral churches in the kingdom; most of the end-walls are still remaining, and many noble pillars, which shew its former greatness. At the other end of the town are the ruins of an ancient castle, still visible, though demolished in the Danish wars. These ruins are upon a large mount; upon which you have a fine prospect all over the town, and of the adjacent country, even to the fea, and the winding course of the river Loffie, which furrounds this town at a fmall diftance; and which is famous for falmon, there being annually pickled and exported from 80 to 100 lasts, all taken in a few months in the fummer, and in a space of one mile, at a village called Germach. river abounds with fish to the very head, which are taken either with hooked tridents by day, or wickerbalkets, or little boats, covered with hides, by night, None but the natives, who are used to them, will venture into these boats.

Above Elgin, Forress, and Nairn, lies that part of the country, called the Brae of Murray, no way comparable to the lower part for fruitfulness; and beyond this are mountains, woods, and green vallies; patticularly Stratherin, well inhabited, and abounding with little towns and villages, and Strathmairn, a still better soil, and possessed by several gentlemen. Stratherin also abounds with lakes, mountains, and streams.

In this country lies Lochmoy, with an island, where the laird of Mackintosh had his seat. This tribe is called Clan Chattan, and are numerous in this country.

But to say a few words more of Elgin, before we leave this county: gentlemen of all parties and opinions, as if this town was the court for this part of the island, leave their Highland habitations in the winter, and come to live at Elgin, with very engaging freedom;

n, will

part of

reedom;

This rich country continues with very little intermission, till we come to Strathnairn, or the valley of Nairn, where it extends a little farther in breadth towards the mountains, and is not inferior to the other in fruitfulness. From the western part of this county you may observe, that the land goes away again to the North; and, as if you were to enter into another island beyond Britain, you find a large lake or inlet from the fea of Murray, going on west, as if it were to cut through the island; for we could see no end of it, nor could some of the country people tell us how far it reached, but that it went beyond Lochaber: fo that we thought, till our maps, and farther inquifition informed us, it had joined the Western Ocean.

After we had travelled about 12 miles, and descended from a rifing ground, upon which we then were, we perceived the lake contracted in one particular face to the ordinary fize of a river, as if defigned

part of blace to the ordinary fize of a river, as if defigned by comby nature to give passage to the inhabitants to converse beyond with the northern part; and then it opened again to its former breath, and continued in the form of a large lake, as before, for many more miles than we would see; being in the whole, according to Mr. Cambers, 23 miles long; but if it be taken on both sides threams, he pass, it is above 35 miles in length.

This situation must necessarily make the narrow art a most important pass, from the most southerly country, arts of Scotland to the northern countries which are expend it. We have been told, the Romans never and opinion of the seem much magnified on this account; but what Mr. Camden records, and is consistent by engaging the accounts from men of learning and observation. engaging her accounts from men of learning and observation,

K 2

be true, this must be a mistake; for we are told, that near Bean-Cafile, in the county of Nairn, there was found, in the year 1406, a fine marble vessel curiously carved, which was full of Roman coins of feveral forts: also several old forts and mounts have been seen here, which, by their remains, evidently shewed themselves to be Roman.

I now entered the thire of Inverness, abounding with large woods of fir and oak, and having in it some iron mines. It contains Badenoch, Lochaber, the fouth

and west parts of Rosse, and the Isle of Sky.

In the narrow pass mentioned above, over the lake, stands the town and fortress of Inverness, that is, a town on the inner bank of the river Ness. castle, founded in ancient times, to command the pass: and some authors write, that it was anciently a royal house for the kings of Scotland. Be that as it will, Oliver Cromwell thought it a place of fuch importance, that he built a strong citadel here, and kent a stated garrison always in it, and sometimes more than a garrison; finding it needful to have a large body of his veteran troops posted here to preserve the peace of the country, and keep the Highlanders in awe, which they effectually did all his time. The fort or citadel built by Oliver Cromwell was a large pentagon: it was fituated close to the entrance of the river Ness into the Murray Firth; but is now entirely in ruins, nothing but banks of earth or ditches remaining.

It is observed, that, at the end of those troublesome days, when the troops of all fides came to be difbanded, and the men dispersed, numbers of English foldiers fettled in this fruitful part of the country;

from whence it received two advantages:

1. They learnt the art of husbandry in more per fection than they understood before; which, will the help of a rich foil, has rendered this part of the

country

country more fruitful than the rest of Scotland to this day: and to this it is in some measure owing, that the harvest is so early, and the corn so good, as is observed above.

2. As Gromwell's foldiers improved them thus in the arts and industry of the husbandman, so they lest them the English accent upon their tongues, which they likewise preserved a long time. At this time they speak persect English, even much better than in the most southerly provinces of Scotland; nay, some will say, as well as at London itself. And indeed their tongue is not only Anglicised, but their palates too; their way of eating and cookery, dress and behaviour, is pretty much according to the southern mode.

Inverness is one of the royal boroughs of Scotland, and, jointly with Nairn, Forress, and Chaunery, sends

a member to Parliament.

The

The town has a military governor, and the corporation a provost and sour bailists, which differ but little from our mayor and aldermen. There is, besides, a dean of guild, who presides in matters of trade; and other borough officers, as usual in corporate towns.

Inverness is not only the county-town of the shire of that name, but it is deemed the capital of the Highlands; and, as such, I shall expatiate upon it, and upon the customs and usages of the Highlanders in general. Yet the natives of Inverness do not call themselves Highlanders, because they speak English. This rule of denomination they borrow from the kirk, which, in all its acts and ordinances, distinguishes the Lowlands from the Highlands, not by the situation, but by the language of the inhabitants.

But though the inhabitants of Inverness speak English, yet there are scarce any who do not understand the Erse or Irish, which is absolutely necessary to carry on their dealings with the neighbouring people; for, within less than a mile of the town, there are sew

K 3 who

who speak English at all, except the gentry, who speak it in the remotest parts.

The town confifts chiefly of four streets, three of which concur at the cross; but the fourth is some-

what irregular.

The castle stands upon an hill, which, though not large, is very steep; it joins to the town on the south-side, is of an irregular figure, and built with unhewn stone. It was completely repaired, to serve as part of the citadel of Fort George, of which the soun-

dation stone was laid in 1726.

The caftle is hereditarily kept by the dukes of Gor-It was formerly a royal palace, where Mary, the mother of James I. resided, when she thought it her interest to oblige the Highlanders; but, before it was repaired, it confifted only of fix lodging-rooms, the offices below, and the gallery above. The gallery is taken down, and, each of the rooms being divided into two, there are now twelve apartments for officers. The descent of the castle-hill to the river Ness is loose gravel, and very steep, and the buildings on that side reach quite to the edge. While it was repairing, the workmen had cut away some part of the foot of the declivity, to make the passage between the slope and the water fomewhat wider; upon which the grave immediately began to run, and the castle in a few hours must have followed the foundation on which it flood, if the town-masons and soldiers had not instantly run up a dry wall at the foot of the hill; and happy it was for them that stones in that country are every where at hand.

At the foot of this hill is a bridge near 80 vards over, confissing of seven arches well built with stone. By the side of this river, and indeed all over Scotland, are to be seen numbers of women with their coast tucked up, stamping in tubs upon linen, to wash it, and, in this place, not in summer only, but in the

The Town-ball is a plain building of rubble, and there is one room in it where the magistrates meet upon the town business, which would be tolerable, but that the walls are rough, not being so much as plaistered, and the furniture only a table, and some wretched chairs.

The houses of this town are so differently modelled, that they cannot be comprehended in any general description; they are, however, mostly low, because the town is exposed to sudden and impetuous gusts of wind, which rush upon it through the openings of the adjacent mountains. The back-part, or one end of the house, is generally turned towards the street, and there is a short alley which leads into a kind of yard, from whence the stairs ascend that lead to the first floor; for the ground-sloor is generally a kind of shop or warehouse, and has no communication with the rest of the building.

The walls are built of stones that greatly differ both in size and shape; many of them are pebbles, and, being almost round, there must necessarily be arge gaps between, which on the outside they fill up, by driving in flat stones of a smaller size, and afterwards face the work all over with mortar thrown gainst it with a trowel, which the call harling.

Before the Union, the houses were neither sashed or slated, and, to this day, the ceiling of one room a nothing more than the identical boards which serve or the sloor of another; of the same kind are the partions between rooms on the same sloor, so that, as the planks dry, there is a chink between each, through which it is easy to see all that passes: but his is not all, for the sloors are full of holes about an K 4

inch diameter. One of these holes is bored on each plank, at some distance from the end, when they are taken from the saw-mill; and through these holes they put a cord, or, as they call it, a woodie, to keep them stat on the sides of the horses which drag them to the place where they are to be used, with the cor-

ner of the other end on the ground.

These holes indeed are filled up with pegs, when they are first laid; but, as the wood shrinks, the hole becomes wider, and the peg less, till it drops out, and is seldom afterwards restored. The windows that remain unsafted have two shutters for the lower half, and the upper half only is glazed; so that when it is necessary to keep out the weather, nothing can be seen in the street. This manner of constructing their windows is not altogether the effect of penury or parsimony; for, in the clan quarrels, many were shot from the opposite side of the way, who were discovered sitting in their chambers through the glass.

But though it was begun by danger, it was continued merely by habit; for these quarrels have not of

late been carried to fuch excefs.

Such are the houses in the principal streets of Invernes: these of the middling fort are yet lower, and have generally a close wooden staircase before the front, which is lighted by small round, or oval holes, just big enough for the head to come through; and in summer, or when any thing in the street excites the curiosity of those without, they look like so many people with their heads in the pillory. The extreme parts of the town consist of wretched hovels, saced and covered with turs, with a bottomless tub or basket in the roof for a chimney.

There are falmon and trout in abundance; also hares, partridge, grouft, plover, duck, mallard, woodcock, and fnipes; but, after Christmas, no mutton is to be procured till August, nor any beef till September,

and

In this place are fix ministers; three to the English, and three to the Irish church, who have each of them 1001. per annum, none having more than that stipend, nor any less than 501. Their manner of preaching is with a whine, which they call the sough; and, as they pray extempore, they are often betrayed into ridiculous absurdities. They do not drink so much as a dram, without saying a long grace over it; and one of them was suspended for riding on horseback on the Sabbath, though it was occasioned by his not being able to pass a ford on Saturday evening, in his way to the kirk

By the general tenor of their preaching, and their proceedings as a fynod, a stranger would be inclined to think, that they held nothing to be a fin but fornication, nor a virtue but keeping the Sabbath. most zealous vigilance is continually used to discover. all breaches of chastity, not only in the North, but in all parts of Scotland; fo that, at Edinburgh, the cityguard has befet the house a whole night, upon information that a man and woman went in there, though in the day-time; and, in the Highlands there are a fet of fellows, who, if they fee two persons of different fexes walk out to take the air, make it their bufiness to dog them from place to place, still keeping themselves concealed; and, if they see any familiarity, will march up, and demand money; upon a refulal of which they will inform, and if they will confirm their K 5 information

information by an oath, the parties must either qui

the country, or do public penance *.

Each church has but one bell to give notice of divine fervice, but the music-bells produce fine harmony; they are played every day from eleven to twelve, upon keys, like an organ, and are heard all over the town.

In their marriages, they do not use the ring, as in *England*; but the bride, if she is of the middle class, is conducted to church by two men who take her under the arms, and hurry the poor *unwilling* creature along the streets, as a pickpocket is dragged to an horse-pond in *London*, having been attended the evening before by the bride-maids, who with great cere-

mony wash her feet.

When a fervant-maid has behaved well in a place, her master and misters frequently make what they call a penny wedding for her when she marries. They provide a dinner and supper, and invite all their relations and friends; and in the evening, when there is music and dancing, the bride must go round the room, and salute all the men, during which ceremony, every person in the company puts money into a dish, according to their inclination and ability; and by this means the new-married couple often procure a sum sufficient to begin the world with very comfortably for persons in their condition.

The moment a child is born, it is plunged into cold water, though it should be necessary first to break the ice. At the christening, the father holds it up before the pulpit, and receives a long extemporary ad-

monition concerning its education.

The people are invited to ordinary burials by a man who goes about with a bell, and, at certain stations,

The company, which is always numerous, meet in the street at the door of the house; a convenient number of whom (strangers are always the first) are then invited into a room, where there are pyramids of cake and sweetmeats, to which some dishes, with pipes and tobacco, are added, merely because it is an old custom; for it is rare to see any smoaking in Scotland.

Each of the nearest relations present wine to every individual of the company, and, as it is expected the guest, when he has accepted the favour of one, should not not refuse it to any of the rest, he is in danger of drinking more than he can conveniently carry. When one for has been thus treated, others are introduced, and, when all have had their turn, they accompany the corple to the grave, where it generally arrives about noon. The minister is always particularly invited, though he performs no kind of fervice over the dead, of whatever fortune or rank. the company is felected to return to the house, where wine is filled as fast as it can be drank, till there is fearce a fober person among them. In the end, however, some sweet-meats are put into their hats, or thurst into their pockets, with which they afterwards compliment the women of their acquaintance. ceremony the call the dradgy, which perhaps is a corruption of dirge.

No fees are paid to the minister or parish, for either

christening, marrying, or burving.

Within a mile of Inverness the Highlands begin to rise on the north-west; but, towards some other points,

K 6 there

there are five or fix miles of what the natives call a

flat country.

Somewhat to the north-east are the ruins of the fort, built by Cromwell, which commanded the town, the mouth of the river, and part of the flat country on the land-side. The rampart is not an unpleasant summer's walk.

About a mile west is a very regular hill, rising out of a persect slat, which the natives call Tomahcurach: it is about 400 yards long, and 150 broad, at the base: it looks almost like a Thames wherry, with the keel upwards; and the inhabitants, who for that reason sometimes call it Noah's Ark, suppose it to be the

perpetual haunt of fairies and witches.

The greatest ornament in all the adjacent country is an island, distant about a quarter of a mile; it is about 600 yards long, surrounded by two branches of the Ness, and well planted with trees. To this place the magistrates conduct the judges, when they are upon their circuit, in the beginning of May, and entertain them with salmon, which is boiled the moment it is taken out of Cruives, and set upon a bank of turf, surrounded by seats of the same.

Not far from the town, large moor-stones, some of them ten feet high, are set up in regular circles, one within another: how long they have been there ranged, or for what purpose, cannot now be certainly known; but, if tradition is to be believed, they were set up by the Romans, either for temples in which they sacrificed to their gods, or tribunals for the trials of cri-

minal foldiers.

At the distance of about two miles is Culloden-house, a large stone-building, with good gardens and a park. This place was besieged by the rebels in 1715, when the laird was absent in Parliament; but the lady held it out against them, and obliged them to raise the siege.

Fart

which or are on the and ends to be 14

At about the same distance from the town, on the contrary side, is another large old building, which belonged to the lord-advocate or attorney-general; and near it a most romantic wood, diversified with great heights and hollows, with springs of water interspersed, that fa'l in numerous cascades, and wind out among the brush-wood below.

By the small proportion of arable land in these parts to the rocks and heaths, the most plentiful year scarce produces sufficient to feed the inhabitants; and confequently, in an unfavourable season, they suffer ex-

treme distress.

At

In Lochaber, which, though bordering upon the Western Ocean, is yet within the shire of Inverness, stands Fort William, so named from king William, in whose reign it was built, principally as a check upon the Camerons, a clan which at that time was greatly

addicted to plunder and rebellion.

It stands in a very rocky and barren country, at the soot of a mountain called Benevish, and one sace of the sortification is washed by a navigable arm of the sea; on the land side it is almost surrounded with rivers, which, though not broad, are rendered impassable by their depth and rapidity. There is also a town called Maryburgh, after the queen, which was originally intended as a sutlery to the garrison, and afterwards erected into a barony, in savour of the governor of the fort. The houses are all, by special appointment, built of timber and turs, that they may be easily and suddenly burnt up by the commandant, when in danger of becoming a lodgement for an enemy.

Fort William is surrounded by vast mountains, which occasion almost perpetual rain. The lostiest are on the south-side: Benevish soars above the rest, and ends in a point, whose height from the sea is said to be 1450 yards. As an ancient Britan, (says Mr.

Pennant)

Pennant), I lament the diffrace of Snowdon, once esteemed the highest hill in the island, but now yields

the palm to a Caledonian mountain.

Near the foot of the bridge, at Inverness, upon a pleasant hill, close by the river-side, was situated Fort. George, which was a great ornament to the town, before the rebels, in 1746, blew it up. It was not indeed a place of such great strength, as it was a beautiful barrack. Their chief engineer, who laid the train, was mounted up into the air by the blast, and killed: he had a dog which was blown up at the same time a great height, and thrown almost over the river; but, being not so mischievous an one as his master, escaped with his life, though lamed.

We have at *Inverness* a quite *Highland* prospect, and more especially as we look towards *Fort Augustus*; for we see nothing but irregular mountains and vallies.

After two months stay at Inverness, I set out for Fort Augustus; in coming to which place I travelled along the banks of the river Ne/s four miles, till I came to Lochness; from whence the river runs, and discharges itself into Murray-Firth at Inverness. Lochness is a most remarkable and beautiful loch, twentyfour miles long, and two broad, in fome places, When we are come to the head of the loch, the profpect is most charming; we look strait along the loch, and losing our fight in the water, on each fide the loch is a ridge of most terrible barren woody mountains, which give great surprize to a stranger. We travel from the head of this great pool, along the banks (which make the foot of these mountains), for near 12 miles, and through a road made with the greatest difficulty, by blowing up monstrous rocks, which in many places hang stooping over passengers, and higher than houses, so that it is a little frightful to pale by them. We find many of these dreadful passes, with water dripping out from every part of the fractured

rock.

rock. These are intermixed with woods of oak, birch, white poplars, and nut-trees, with fprings of water, and many curious plants, peculiar to those mountainous places. We then came to a small and pitiful house of entertainment (yet the only one on the road), called the General's Hut; because general Wade lived there, when he commanded the forces in making these most furprising and useful roads through the Highlands of Scotland.

Before we came to this place, we had a view, on the other fide this loch, of the ruins of the famous castle of Urquhart, formerly consisting of seven great towers, faid to be built by the Cumins, and demolished by king Edward I. about four miles to the westward of which castle, on the top of a very high hill, two miles perpendicular, is a lake of cold fresh water, about 30 fathom in length, and fix in breadth; no ftream running to it or from it. It could never yet be fathomed; and at all feasons of the year it is equally

full, and never freezes.

Thus far my friend.

To whose account it will be proper to add the following brief history of the great work performed by the late general Wade, in relation to the new-made alter fo

preferve frequent mit, the tocks and Rones, ra

roads

s C O T L A N D. 209

to of a roads into and through the Highlands of Scotland, which have so much altered, and will more and more alter for the better, the face of this part of the united kingdom.

In the year 1724, general Wade, by commission from me to his majesty king George I. proceeded to the Highlands, to inform himself of some irregularities then complained of. These Highlands, as has been before obtains; plained of. These Highlands, as has been before obtains; plained of. These Highlands, as has been before obtains; plained of mountains, which rise one above another, and examine the north part of the island, above 200 miles in length, and from 50 to more than 100 in breadth. The little vallies between are divided from one another by barren rocks, bogs, and precipices. Hence the most discharders, being much hindered from commerce and acquaintance with the more cultivated part of the is as country, were likely to continue for ever attached to their ancient barbarous customs and manners, unless some expedient were found to introduce trade and industry among them.

See The general travelled over the most difficult and dangerous passages of the mountains, and in his progress projected the bold undertaking of making smooth and spacious roads in that heap of consusting mooth and spacious roads in that heap of consusting smooth and spacious roads in that heap of consusting smooth ficers properly appointed. These roads are all now fit for wheel-carriages, or a train of artillery, being about 250 miles in length, and from 20 to 24 feet in breadth, including aqueducts and side-drains, that preserve them from the injuries of violent rains, for frequent among the mountains. Where the hills persent the preserve them from the injuries of violent rains, for frequent among the mountains.

frequent among the mountains. Where the hills permit, they run in right-lines, notwithstanding the
tocks and bogs which often interposed. The huge
made
tones, raised out of the ground by engines, are set

up

up by the road's side, and serve as guides in deep snows; and at every sive measured miles are pillars to inform the traveller how far he has proceeded. The roads enter the mountains at two different parts of the low-country; one at Crief, 14 miles north of Stirling, where the Romans lest off their works, yet visible, and the other at Dunkeld, 10 miles north of Perth. The first, 85 miles in length, leads to Fort Augustus, at the west-end of Lochness, and proceeds to Glenaimond, where the hollow is so narrow, and the mountains on each side so high, that the sun is seen but two or three

hours in the longest day.

From Glenalmond the road continues to Abberfaldy, where, by a bridge, it crosses the river Tay, on to Dalnachardock, and there falls in with the road which enters the hills of Dunkeld, and thence over the hills of Drummochter to Dalwhiney, where it branches into two; one to the north-west, through Garva Moor, and over the Coriarack mountains to Fort Augustus; the other due north to the barracks of Ruthven and Inverness. Fort Augustus stands in the very centre of the Highlands, half-way between Fort William on the workcoast, and Fort George at Inverness on the east coast; and the road passes by the sides of the lakes, Ness, Oick, and Lochy, which divide the northern from the fouthern Highlands. From Inverness to Fort William is 60 measured miles, good part cut through solid rock, but now the most beautiful road in the kingdom, and promotes a trade from Ireland to the east and north of Scotland.

It would be needless to enumerate the various difficulties that occurred in the making of these roads;

I shall therefore mention but two or three.

When the miners blasted with gun-powder the black rock on the side of Lochness, they were obliged to hang by ropes till they bored into it. This lake is in itself a curiosity, being a beautiful natural canal,

21 mile ing from being all was ne miles, a agreeable either en Luchy, i precipic. The

heart of

11 miles in length, with the rocks and mountains rifing from the water's edge. It lies in a direct line, being above a mile in breadth, 130 fathoms deep, and was never known to freeze. For the space of 12 miles, along the fide of the lake, the road forms an agreeable terrace, from whence the lake is feen to either end, and along the three lakes, Nefs, Oick, and Lady, in feveral places, the road is fecured from the precipices by walls two or three feet high.

The Laterfinlay road runs along the fide of Lochy for nine miles together, on rocks which project over the water formerly impaffable, and brought to their prefent evenness chiefly by the force of gun-powder.

The road over the Coriarack mountain, which is above a quarter of a mile in perpendicular height, is carried on, upon the fouth declivity, by 17 windings, each about 70 or 80 yards in length, and all supported on the lower-fide, and at the turnings, with stone walls of ten or fifteen feet high. The pass of Snugburgh, on the north-fide of this mountain, is a deep bottom between two steep hills exceeding high, joined two dry arches, and a wall of supportment.

There are 40 stone bridges built upon these roads; of which the most considerable are those of Gary and Tumble, of fingle arches, upwards of 50 feet span, over rapid rivers, which in time of floods roll down

tones of monstrous fize.

The ease and convenience of these roads has infuced several of the Highland gentlemen to make good ways, at their own expence, from their homes to the main road; and where there were nothing but turfouts for 100 miles together, there are now, at 10 or 12 miles distance from each other, houses of stone and lime for the accommodation of travellers. English drovers, who used to attend the fairs of cattle on the borders of the Highlanders, now go into the heart of the country; and the foldiers, who were many of of them husbandmen, taught the inhabitants a better parth to manner of tilling their ground; and many other adapted of wantages have accrued to the Highlanders, and the 2. kingdom in general.

This work, though fo stupendous and beneficial a wife and might have well added lustre to the Roman name, we sking in effected by a handful of men, comparatively speaking and the is and at a small expense. These men, who were sold is a standard at a small expense. These men, who were sold is a standard at a small expense. These men, who were sold is a standard a standard and the in groups of the standard and s

When we are over the bridge of Inverness, we enter the not of that which we truly call the North of Scotland, and others the North Highlands; in which are feveral different the tinct shires, but cannot call for a particular description his part because they are all one undistinguished range of the rimountains and woods, overspread with vast and almost signoidly uninhabited rocks and steeps, filled with deer innormal what qual merable of various kinds; among which are some of the source overgrown stags and hinds of the red-deer kind therland, whose steeps, in my own way, this frights and substants.

Before I describe, in my own way, this frights Suthers country, it is fit to observe, that Scot and may be disched into four districts, which I have not seen any our geographers do before me; yet, I believe, may be the land; not be an improper measurement for such as would Caithness.

form a just idea of the whole in their minds:

1. The South-land, or that part of Scotland south besides all the river Tay, and drawing a line from the Tay about lant hunt Patt liar to the

rom the

hird div

bette Parth to Lochlomond, and down to Dunbarton, and the er ad ank of Clyde.

2. The Middle, or Midland, being all the country from the Tay and the Lochlomond, north to the lake of cial a Vess and Aber, including a long slope to the south, aking in the western Highland of Argyle and Loin, adding in the western Highland of Argyle and Loin, and the isles of Isla and Jura.

3. The Northland, being all the country beyond so, and the Loch or river Ness, North, drawing the line over the narrow space of Glengary, beson ween the Ness and Aber, and bounded by them both done from the eastern to the western sea.

4. The Islands, being all the western and northern sands, the Hebrides, Sky, Orkneys, and the other isles seyons of Shetland.

Effect According to this description, having passed the midge over the river Ness, 1 am now entered on the hird division of Scotland, called the Northland. Here tente we not only the best hawks of all kinds, but eagles in

he like bridge over the river Nefs, 1 am now entered on the hird division of Scotland, called the Northland. Here here not only the best hawks of all kinds, but eagles in year numbers, which prey upon the young sawns all did when they sall first, and upon wild-sowl, with which is part of the country abounds.

The rivers and lakes also in this country are so prodigiously sull of salmon, that it is hardly credible innow what quantities are taken in the Spey, the Nairn, the whole, and other rivers hereabout.

The several counties beyond the Ness, are Ross, Sukind therland, Strathnavern, Caithness, and, beyond those, the islands of Orkney and Shetland.

Sutherland is called the shire of Dornoch, from the chief town of the province called Dornoch, a royal burgh, noted for a castle belonging to the earl of Sumberland; for its cathedral church for the diocese of the sour annual fairs. It has three remarkable forests, which once was part of this shire, and for its four annual fairs. It has three remarkable forests, which once was part of this shire, and for its four annual fairs. It has three remarkable forests, which once was part of this shire, and for its four annual fairs. One fort of bird is pecular to the country, called knug, which resembles a parrot,

rot, and digs its nest in the trunks of oak, within beak. There are about 60 lakes in this county : the greatest is Lochstin, 14 miles in length; in many of them are islands, very pleasant for summer habitations. In the ifle of Brora the earl of Sutherland has an house, which he makes use of when he comes to hung deer, which abound in it; and in some of the lakes and rivers of this county, as well as in the rivers of Aberdeen and Ross, are found pearls of great value. In short, this shire so abounds with lakes, rivers, and bays, that there is scarce a farm in the whole country but is washed either with fresh or salt water, so that the inhabitants have store of fish and fowl. The bear or big in this county is reckoned excellent. It has also filver mines, and excellent iron mines, coal mines, and quarries of free-stone, but much neglected. It has many commodious harbours for thips to export its commodities, wich are cod, falmon, fall beef, wool, ikins, hides, tallow, butter, cheefe, &c.

The bays and coasts also abound with seals, have formetimes whales, and shell-fish of all forts.

The earl of Sutherland has a castle beyond Invernish called Dunrobin, situate on the eastern shore. In the gardens of this seat, though so northerly, saffron grows

strathnavern is part of Sutherland, and derives its name from Strath, a valley, fituated on the river Navern, which runs through it. The country is mountainous, and formerly was noted for breeding greater numbers of ravenous wolves than any other in Scotland. The bays and rivers are full of fish; it is very woody, and many lakes are in the vallies. There are feveral monuments in it of victories gained over the Danes, particularly one at Enbo, which is a stone cross, said to be over a Danish king. The inhabitants are great hunters, and despise those who are not; so that venifon with them is a common dish. The situation of

the country not admitting of towns, the inhabitants live up and down in small villages. On the northern coast of this county are several islands. Of the many akes Lochnavern and Lochyol are the largest, and the atter affords an island, which is inhabited in the sumner-time. Borwe and Tong are the places of most note, the latter the principal feat of the lord Rea, hief of the Mackays, who is the principal proprietor f Strathnavern; but holds it of the earls of Sutherand, to whose eldest sons it gives the title of lord. ord Duffus is descended of this family. The county as feveral mountains of white marble, as we are told.

North of the mouth of the river Ness, is the famous comertie bay, or Cromertie Firth, noted for being the nest harbour, with the least business perhaps, of any Britain. It is 15 miles long, and in many places romiles broad; and like Milford-Haven in Wales, is de to receive the royal navy of Great Britain, both to out and come in with fafety: but, for want of ade, this noble harbour, which, by geographers and ariners, is called Portus Salutis, or the Harbour

Safety, is become almost useless.

The shire of Cromertie is denominated from a royal ugh, standing upon the Firth of Cromertie. The woody, fevers of Cathnels is divided from Section 1.

Caithness is divided from Sutherland by the mountain dand a tract of mountains running from it as far

Some people tell us, they have lead, copper, and in this part of Scotland; and I am inclined to beation of reit; but it feems referved for a future and more industrious

industrious age to search into it. Should a time come, when these hidden treasures of the earth shall be discovered and improved, this part of Scotland would be no longer esteemed poor; for such a production would soon change the face of things, bring wealif and commerce to it, fill the harbours with ships, the towns with people, and, by consuming the provisions occasion the soil to be cultivated, the fish cured, the cattle consumed at home, and thereby diffuse prospe

rity all around them.

There are many little towns and villages, befide gentlemens seats, in Caithness, as far North as it is but the people are more addicted to good living within doors, than to shewy edifices, or fine feats. The be house in it is Caftle Sinclair *; fo called from the nam of lord Sinclair, whose feat it is; and they have se veral other castles in the county. The lord Sinclain of Ravensheugh in Fife, is chief of the name. His an cestors formerly possessed Orkney and Shetland, an were allied to the royal family of Denmark. But on of the family fquandered away his effate, and, amon the rest, these islands; and got for it the ingloriou title of William the Waster. The chif town and row burgh in Caithness is Wick, or Weich, whence it i called the shire of Weich. The town lies convenient for trade, and has a good harbour for ships on the eastern coaft. It is the residence of the sheriff, or hi officer.

Thurso, another town with a good harbour, lies all on the northern coast, in a little bay. West from hence runs the river of Fors, at the mouth of which there is also a little town of the same name. The isle of Orkney and Stetland, I refer to the account of the Isles.

This country is furrounded with the fea, and those two great inlets of water, mentioned above, called the Nis and Aber: so that it forms a peninsula, by means of that small neck of land of about eight miles long, which Mr. Camden calls the Garrew, or Glengarrew, others Glengary. Were it not for this, the whole division of the Northland would be a distinct island, separated from all the rest of Great Britain, as effectually as the Orkneys, or the Sky, are from this.

That part which lies to the east, is open to the sea, without cover; the west and the north are, in a manner, surrounded with out-works, as a defence to break
off the raging ocean from the North; for the Western
Mands on one side, and the Orkneys on the other, lie
is so many advanced fortifications, or redoubts, to

combat that enemy at a distance.

From Dunrobin castle you have nothing of note offers itself, either by sea or land, but an extended hore, lying north and south, without towns, and without harbours; and as there are none of the sormer to be sound, so none of the latter are necessary.

The land thus extended lies north and fouth to Dungshy-head, or Duncan's-bay-head, which is the utmost extent of it, on the east side of Britain North, and is distant from Cromertie 18 leagues north. From his point of Dungsby-head, as I observed before of Buchan and Winterton, the sailors take their distances, and keep their accounts in their going farther North;

from this point of Dungsby-head to the Fair isle, or which is the first of Shetland, or the last of the hineys (call it which you will, for it lies between

oth), is 25 leagues, or 75 miles.

Vol. IV. L Frem

From the same Dungsby head to Sumburgh-head, that is, to Shetland, is 32 leagues, or 96 miles, and to Lerwick fort in Shetland 110 miles.

Thus, from Buchanness to Sumburgh-head, in Shet.

land, is 47 leagues.

And from Wintertonness near Yarmouth on the coast of Norfolk, to Buchanness, on the coast of Aberdeen, is just 100 leagues. So from Winterton to Shetland are

147 leagues, or 431 miles.

I am now to observe, that we are here at the extremest point of the island of Great Britain; and that here the land bears away west, leaving a large strait, or sea, which they call Pilland, or Pentland Firth, and which divides between the island of Great Britain, and the ifles of the Orkneys; a paffage broad and fine; for it is not less than five leagues over, and has a fufficient depth of water for ships to fail in: but the tides are so fierce, so uncertain, and the gushes and sudden squalls of wind so frequent, that very few merchant-ships care to venture through it; and the Dutch East India ships, which come north about (as it is called) in their return from India, keep all farther off, and chuse to come by Fair-ifle, in the paffage between the islands of Orkney and Shetland; whither they generally fend their men of war to meet them, being fure of not missing them in so narrow a paffage.

But the paffage here is much broader, being at least nine leagues from North Ronalsha, the farthest island of the Orkneys, to Fair-Isle, and five more from Fair-Isle to Shetland: so that it is 14 leagues clear open sea between the Orkneys and Shetland, with only a small island in the way, which has nothing dangerous

about it.

In the passage between the land's-end of Britain, and the Orkneys, is a small island, which our mariness called Stroma; Mr. Camden, and others, Sowna; and is

the which chee

Britain, nariners

much

From hence west, we go along the shore of the Firth, which they call Pentland, where is the famous house called John o' Groat's. We set our horses feet into the fea, on the most northerly land, as the people fav. of Britain, though, I think, Dungsby-head is as far North. It is certain, however, the difference is but very small, being either of them in the latitude of 50° 10' north, and Shetland reaching above two degrees farther. The dominions of Great Britain are extended from the Ifte of Wight, in the latitude of 51 degrees, to the isles of Unfla in Shetland, in the latitude of 61 degrees 30 minutes, being 10 degrees or full 600 miles in length; which island of Unft, or Unfla, being the most remote of the isles of Shetland to the north east, lies 167 leagues from Wintertonness in Norfolk.

Here are found, however mountainous and wild the ountry appeared, the people extremely well furnished with provisions, especially sour forts, in great plenty; two of them fufficient for a common table, the other

two, the splendor of the greatest:

1. Very good bread, as well out bread as wheat,

though the last not so cheap as the first.

2. Venison exceeding plentiful, and at all seasons, young or old; which they kill with their guns, where-; and is tree they find it, for there is no reftraint; on which

L 2

account all the Highlanders have fire-arms, and become excellent marksmen.

3 Salmon in fuch plenty as is fcarce credible, and consequently so cheap, that to those who have any substance to buy with, it is not worth giving themselves any trouble to catch it. This they eat fresh in the season, and at other times cured by being dried in the sun, and so preserved all the year.

4. They have no want of cows and sheep; but the latter are so wild, that sometimes, were they not naturally used to slock together, they would be much

harder to kill than the deer.

From hence to the west point of the passage to Orkney is near 20 miles, which may be called the end of the island of Britain, which saces directly to the north pole; so that the tail of the Great Bear is seen just over your head. The day is here, in summer, said to be 18 hours long, the sun remaining so long above the horizon; and when he is set, he makes so small an arch of a circle below the horizon, that it is much above a twilight all the night; but it must be remembered, that the dark nights take in winter their turn, and are protracted to as great a degree.

Yet it is observable here, that they have more temperate winters, generally speaking, than we have in the most southerly part of the island; and particularly, the water in some of the rivers, as in the Ness, for example, never freezes; which is accounted for from the nearness of the sea, which, filling the air with salt vapours, sheathes, as it were, the acute particles of the

cold.

For the same reason the snows are not so deep, nor do they lie so long upon the ground, as in other places. The summits indeed of the high hills, whither these vapours cannot reach, are continually covered with snow, and perhaps have been so for many ages.

On the Englishman South, to and after had not contact the second second

On the most inland parts of this country, especially in the shire of Ross, they have vast woods of fir-trees for 15 or 20 miles in length, not planted by mens hards, as I have described in the southern part of Scalland; but as they came out of the hands of Nature, and nourished by her handmaid, Time. If we may believe the inhabitants, they are large enough to make masts for the biggest ships; and yet are of no service, merely for want of the convenience of water carriage to bring them away.

And now leaving the northern prospect, we pass the opposite point west from Dungsby-head, and which the people call Faro head, though Mr. Camden calls these two points by two different names: the east point, or Dungsby-head, he ca'ls Virvedrum Promontorium; the west point, or Faro-head, he calls Sarve-

drum Promontorium.

On

From hence the vast western Atlantic Ocean appears; for which the geographers have not agreed upon a name, there being no country to derive it from.

And now we were to turn our faces fouth; for as to the islands of this sea, which make the fourth division of Scotland, as I mentioned before, I shall take notice of them under one head, in the conclusion of

my Tour.

In our attempt to come down to the fouthward by the coast of Tayne, and the shire of Ross, we should have been extremely disappointed, and perhaps have been obliged to get a ship or bark, to have carried us round the Isle of Sky into Lochaber, had it not been for the extraordinary courtesy of some of the gentlemen of the country.

On the other hand, we unexpectedly met here some Englishmen, who were employed by merchants in the South, to take and cure a large quantity of white-fish, and afterwards of herrings, on account of trade. We had not only the civility of their assistance and accom-

L 3

modatio

modation in our journey, but the pleafure of feeing what progress they made in their undertaking.

As for herrings, the quantity of them was prodigious. The shoal was beginning to come, when we first came to the head of Pentland- Firth; and in a fortnight's time the body of their numberless shoals began to appear; but, before we left the coaft, you would have ventured to fay of the fea, as they do of the river Tibifeus, or Thiese, in Hungary, that it was onethird water, and two-thirds fish. The operation of taking them could hardly be called fishing; for they did little more than dip for them into the water, and take them up. I make no scruple to say, that, if there had been 10,000 ships to have loaded with them, they might all have been filled. The fish did not feem to stay, but passed on to the fouth, that they might supply other parts, and make way also for those innumerable shoals which were to come after.

Had the quantity of white-fish been any way proportioned to the herrings, there would, no doubt, have been such encouragements to the merchants, that they would never have given it over; but they found it would not fully answer: not but that there were great quantities of cod, and the fish were fizeable and good; but, as they are taken with hook and line, they could not with any dispatch get a sufficient loading, or lay

up enough in large quantities in the feafon. The bay of Fayne is unfafe for ships, runs a great way up into the country, divides Ross from Sutherland, and ends at the promontory of Tarbat. We found the town of Tayne, and some other villages, tolerably well inhabited, and fome trade also, occafioned principally by the communication with the Western Islands, and also by the herring fishing, the fishing-boats from other parts often putting into those ports: for all their coasts is full of loughs and rivers, and other openings, which make very good harbours

for th lough they ! fea; put in multi not fo dilcov

for shipping; and, what is remarkable, some of those loughs are infinitely full of herrings, even where, as they tell us, they have no communication with the sea; so that they must have, in all probability, been put into them alive by some particular hands, and have multiplied there, as we find at this time, if they have not some communications with the sea, which are not discovered to the inhabitants.

We could understand no more of what the people commonly said on this side, than if we had been in Mirocco; all the remedy we had was, that we found most of the gentlemen spoke French, and some few broad Scotch. It was indeed, upon other accounts, much for our convenience to make the common peo-

ple believe we were French.

Should we go about here to give you an account of the religion of the people in this country, it would be an unpleasant work, and perhaps scarce gain credit. You would hardly believe, that in a Christian island, as this is faid to be, there should be people, who know so little of the Christian religion, as not to distinguish Sunday from a common day of labour, or the worship of God from an ordinary meeting for conversation. I am unwilling to record fo ungrateful a truth, which may in time find redress; but I cannot but say, that his majesty's gift of 1000% paid annually to the Asfembly of Scotland, for fending ministers or missionaries for the propagating Christian knowledge in the Highlands, is certainly one of the most needful charities that could have been thought of, and truly worthy of fo great a prince; and, if prudently applied, as there is reason to believe it is, may in time dispel that cloud of ignorance, that has so far overspread this unhappy part of the country. The people have the Bible in their own language, the Erfe, and the miffionaries are obliged to preach to them, and examine and catechife their children, in the Erfe language;

fo that we are not to despair of having this country as well instructed in time, as other parts of Britain,

The thire of Tayne, with the little thire of Cromertie, and part of the thire of Inverness, comprehends the whole country called Ross. The first tract towards the fouth-west, in the county of Ross, is Kintail, separated from the Ifle of Sky by a narrow firth. Next is a little tract called Glenelg, the paternal estate of the Tite earl of Seaforth, whose chief feat is called Caffle Tiendoven, lying in an island of the above mentioned Firth. Farther north, on the fame coast, lies Lochew, with thick woods, where iron was formerly made. A little farther north, Lochbrim runs into this country, and is remarkable for its noble annual fishery for herrings.

The peninfula which lies between the bay of Cramertie and Murray is called Ardmeanach, upon the shore of which stands the town called Fortrose, or the Chanonry of Ross, formerly a bishop's see. It is pleafantly fituated in a valley, betwixt fruitful hills. It had once a flately cathedral and caftle, where the bi-Thop dwelt. Here the late earl of Seaforth had a noble or lech,

house.

Beaulieu, formerly a pleasant and rich abbey, lies near the mouth of the river Farrar. The bulk of lord Lovat's estate was in these parts; the rest, to the amount of 5,000 l. per annum in Stratherick. He was a potent chiestain, and could raise about 1000 men; but I found his neighbours spoke as unfavourable of him, as his enemies did in the most distant parts of the kingdom. These estates were forseited to the crown on his engaging in the late rebellion, but were restored to his son, colonel Fraser, in 1774, by act of North Parliament. The late earl of Scasarth had near its castle, called Kildun. There are other seats of an town in cient samilies in this country; and indeed man sufficient samilies in this country; and indeed man massiliered throughout the northern part of the united kingdom which, would my compassallow me to describe, or but men, as

On the west is the Isle of Sky, lying from the westnorth-west, to the east fouth-east, and bearing upon the main land, only separated by a narrow strait of water; fomething like as the Isle of Wight is separated from the county of Southampton. We left this on our right, and croffing the mountains, came, with as little flay as we could, to the loughs called Lochyol, and Lochlochy, which run through that large country called Lochaber, that is, over the lochs, and which some elect to call the river Aber, or Abre, i. e. the water which, as I faid above, assists, with Loughness, or Lochuefs, to separate the north land of Scotland from the middle part.

This is a long and narrow inlet of the fea, in length above 24 miles, the depth unknown: which, opening from the Irish sea, south-west, meets the fiver Abre, or, as the Scots much more properly express it, the water of Abre; for it is rather a large lake or leeb, than a river; and receives innumerable small rivers into it. It rifes in the mountains of Ross, or of

rivers into it. It rifes in the mountains of Ross, or of Glengary, within five or six miles from the shore of Island to the narrow lake like itself; and as the Ness runs away east le was to leaverness, and so into the great gulph called Murmen; say Firth, so the Abre, becoming presently a loch, or lake, always goes away more to the southward, and sto the Lochaber is 50 miles in a strait line from Inversory at west to Inverness, and is one of the most barren countries in North Britain; though the people have wood, ear it a goats, and deer, in plenty. Glence is almost the only of any town in it; it is noted for the barbarous and inhuman many massacre perpetrated there by king William's soldiers, and on the latter of men, wooth men, and children, without mercy. A massacre that

that made a great noise, and was universally detested: and what made it still the more odious, was, that the commander in that bloody work found friends enough to screen him from the inquiry that was attempted to be made into the horrid fact, in order to find out who

gave him his orders for it.

Lochaber is noted in history for Banco, its gallant thane, about the year 1050, who was murdered by the tyrant Macbeth, because of a prophecy, "That his posterity should enjoy the crown for a long series of years:" which accordingly happened; for his fon, flying into Wales, married the prince of North Wales's daughter; by whom he had Walter, afterwards steward of Scotland; from whom the royal family of Stuart was descended. It was on this story, that our celebrated Shakspeare founded his tragedy called Macbeth.

On this water of Abre, just at the entrance of the Loch, was anciently a fort built to curb the Highlanders, on either fide, called Invertichy, now Caftle Wil-

liam before mentioned.

From Invertochy to Lochness, is the famous road

made by general Wade, as described before.

To defend this road from the rage of the Highlanders, and, at the same time to keep them in awe, the general built a regular fortification, called Fort Augustus, which, as has been faid, was taken and demolished by the rebels in 1745.

At this place we take our leave of the third division,

which I call the north-land of Scotland.

We have nothing now remaining for a full furvey of Scotland, but the western part of the middle division of it; and this, though a large country, yet affords not an equal variety with the eastern part of the same division.

To traverse the remainder of this country, I must begin upon the Upper Tay, as we may justly call it, where I left off, when I turned away east; and here we have, in especial manner, the countries of Badenoch,

noch, Athol, and Braidalbin: this is an hilly country properly; but as it is watered by the Tay, and many other pleasant rivers, which fall into it, there are several fruitful valleys interspersed among the hills; nor are even the Highlands themselves, or the Highlanders the inhabitants, any thing so wild, untaught, or untractable, as we have been made to believe; and as are to be found in the north-land division, that is to say, in Strathnavern, Ross, Tayne, &c.

The duke of Athol is lord, I had almost faid king of this country; and has the greatest number of vassals of any nobleman in this, or any part of Scotland.

The late duke was always an opposer of the Union in the Parliament holden at Edinburgh, for passing it into an act; but he did not carry his opposition to an

height of tumult and rebellion.

The duke had feveral fine feats in this country; as first at Dunkeld, upon the Tay, which I mentioned before; another at Huntingtour, in the Strathern, or valley of Ern, where the duke has a fine park, and great store of deer. This may be called his hunting-

feat, whither he fometimes retires for fport.

He has another feat at the cafile of Blair, farther north, and beyond the Tay, on the edge of Braidalbin, upon the banks of a clear and fine river, which falls into the Tay a few miles lover. By means of fluices this river is formed into a pond, quite in the front of the house, which is fix stories high, and a prison in appearance; having the windows covered with iron bars; its walls five feet thick. It has vast high mountains on every fide; but at a great distance from the house. The gardens are not so curious as at the duke's house at Dunkeld; but here are statues, which the other has not; to wir, an Hercules, a Diana, Bacdus, and a temple of Fame, filled on every fide with buffoes of the ancient philosophers and poets; that of the duke himself being placed in the middle in lead L 6

228 S C O T L A IV

gilt. He has also English cattle, which thrive well. The town consists only of a few peat-houses, except the minister's house, one pretty good 'Change, as it is called, or public-house, and a poor old kirk, the pews all broken down, doors open, full of dirt: the minister, however, preaches in it once a week, in the Erse tongue. Mile-stones are erected to this house very some probability which is about 20 miles. from Dunkeld, which is about 20 miles.

The county of Braidalbin has not fo much as a fingle owner village in it of ten houses; yet from its Latin name to rest the royal family: it is seated very near the centre of ceived Scotland; and is alleged to be the highest ground in its for that the rivers, which rise here, are said to run every way from this part, some into the eastern, and realing some into the western seas.

fome into the western seas.

fome into the western seas.

The Grampian Mountains here are said to cut through one pa Scotland. As the country is rough, and uncultivated the inhabitants are an hardy race of men, who make eat the excellent soldiers, when they are listed abroad in region of gular, and disciplined troops; and I must add, the sisted are much civilized to what they were formerly sisted, These mountains abound with flocks of black cattle same in sheep, horses, and goats. The beef and mutton at is lady of delicious taste, and the wool is valued for its white mess and softness.

The duke has also another seat in Strathern, which is called Tullibardin, and which gives title of marquit to the eldest son of the house of Athol. At the lower part of this country the river Ern salls into the Tay and greatly increases its waters. This river rises is mad on west, on the frontiers of the western Highlands na Glengyl, and running through that pleasant country called Strathern, salls into the Tay below St. Johnsta We are Soon after the Ern shoots forth from the mountain win to the strathern; and then runs by Dupplin Casses, the country is and then runs by Dupplin Casses, the strathern is and then runs by Dupplin Casses, the strathern is and then runs by Dupplin Casses, the strathern is and then runs by Dupplin Casses, the strathern is and then runs by Dupplin Casses, the strathern is and then runs by Dupplin Casses, the strathern is and then runs by Dupplin Casses, the strathern is and then runs by Dupplin Casses, the strathern is and then runs by Dupplin Casses, the strathern is a strathern in the strathern

well. feat of the earl of Kinnoul, whose eldest son is thence called lord Dupplin. The late earl of Kinnoul, when lord Dupplin, married the daughter of the earl of Oxion, the son that occasion, mada a peer of England, and was, it is on that occasion, mada a peer of Great Britain, by the in the side of lord Hay of Pedwarden. His estate here is a house very good one; but not attended with vassals and supprinciples, as the duke of Athers is The Country tin the title of lord Hay of Pedwarden. His estate here is a house very good one; but not attended with vassals and superiorities, as the duke of Atbal's is. The several single owners of this seat, having been pretty much used mane to reside in it, have adorned it at several times, each one of according to his particular genius. It has lately returned to served a new decoration, two wings being added for the init; offices, as well as ornament.

The old building is spacious, the rooms large and reslings losty, filled with furniture suitable to its outward magnificence, particularly with abundance of through ine paintings.

The old building is remarkable also for the greatest decorate the Scots ever received from the English, in the state of the second seat the Scots ever received from the English came to led, that shift. In this battle 80 of the samily of Lindsay permerly ished, and of the family of Hay so many, that the cattle ame had been extinguished, had not the chief left that a si lady with child.

So white From this place we went to Brechin in Angus, formerly mentioned, an ancient town, with a castle sine-ty marquit Pannure, to whom it belonged chiefly, having formerly in the second side of the second side o

afile, 1

take westward, we had a like prospect of a rude and

wild part of Scotland to go through.

The Highlands of Scotland may be divided into two parts, the West Highlands and the North Highlands the latter I have spoken of at large, containing the counties of Athol, Lochaber, Badenoch, Strathfper, In verness, Ross, Sutherland, and Strathnavern, together with the Ifles of Sky, Lewis, &c.

The West Highlands contain the shires or counties of Dunbritton or Dunbarton, alias Lenox, Bute and Argyle, which last contains the district of Cowal Knapdale, Lorn, and Cantyr; the Ifles of Mull, Jura

Braidalbin is sometimes reckoned a part of the North, and fometimes of the West Highlands.

On the banks of the river Ern lies a very pleasand when wale, which continues from the Tay, quite up to the Highlands, called by Claudian, Glacialis Ierne; but the Scanow, according to the usage of Scotland, Strathern, or the Vale of Ern. It is an agreeable country, has had good many gentlemens seats on both sides the river; but French seats on ear the Highlands, has often suffered by deptorally in dations in former times. dations in former times.

dations in former times.

In it are many Roman camps; particularly one a fons. Ardoch; besides a Roman highway towards Perth were more Several Roman medals have also been found there, and foons, of late two tabulæ curiously enamelled, with a sepulations, that who south parts of Perthshire, abound with metals and for the similar sealiminaris; and at Glention, they meet with the standard of the free sealing and a sundance of wool, supply that anguage desect.

The family of Montrose, whose chief was sacrificed have per for the royal cause in the great rebellion, had a strong British castle here, called Kincardin, which was demolished

in the Drum in the The t the la the la Fames made l

vernor The only re not tou It is

Highlan both of

It is hard to fay, whether the Northern or Western Highlanders make the best soldiers. It is certain, they both of them are defrauded of an honour due to them, leasant when we attribute several gallant atchievements to the Irish battalions abroad, which were performed by the Scots. Thus in particular it is said, the Irish toops beat the Germans out of Cremona, after they had got possession of the town, and had taken the French general, the marshal Villeroy, prisoner: that depte the Irish battalions in the Spanish service behaved galantly in Sicily; and so on many extraordinary occasions. Now it is to be observed that these soldiers were most of them Scots Highlanders who, on all occasions, go over into France, and list among the Irish soppis, nay, in the late wars, it has been observed, and that whole regiments of Highlanders have been raised to the service; who, when they were got abroad, and would take the first opportunity to defert and go over the wind the French, and so list in the Irish battalions, their riginal countrymen, and who still speak the same anguage. But in the late war, our administration and the address to employ whole regiments of these risked have people, to much better and more loyal and truboth of them are defrauded of an honour due to them, trificed have people, to much better and more loyal and tru-British purposes. One

COTLAN

One of the happy consequences of taking away the heritable jurisdiction, was the great number of Scotch who enlifted in the British armies. - If the amount of those who listed, were joined to those who formerly were obliged to watch their motions, the total would furprise a reader who never turned his thoughts to the

fubiect.

Leaving the country about Breedin, and the Lowlands of Strathern, we went away west; but were prefently interrupted by a vast inland sea, rather than a lake, called Lochlomond. It is indeed a fea, and looked like it from the hills from whence we first descried it. It contains 30 islands, three of which have churches, and feveral of the rest are inhabited. The chief is Inchmurin, about two miles and an half in length, fruitful in corn and grafs, and abounds with deer, which the Scottish kings were accustomed to hunt there, The others most remarkable are, Nachastel, so called from the old castle in it; Inchdavanan, noted for broom, abundance of wild berries, pleasant habitations, gardens, and fruit-trees; Inchennougen, noted for birchtrees and corn-fields; Inchnolarg, noted for yew-trees, which grow no where elfe in these islands; and Rouglash, where the laird of Macfarlan has an handsome feat on the east fide of the lake. Kilmaronoch, a fine feat, once belonging to the earls of Caffuls, but now to the earl of Dundonald; Buchan castle, and several

This lake, or loch, is one of the largest in Scotland, being more than 20 miles long, and generally eight miles in breadth; though, at the north end of it, not near fo broad. It receives many rivers into it, but empties itself into the Firth of Clyde, at one mouth.

This lake abounds with fifth of feveral forts, particularly a fort called poans, and by fome pollocks, pe-culiar to it; a kind of eel, very delicious to eat. This gave occasion to the mistake of authors, who said this once cons

lake

In the beginning of November, 1755, Lochlomond, in the neighbourhood of Dunbarton, role on a sudden, in a perfect calm, to a most unusual height; the waters forcing their way over confiderable tracts of ground, where they had never been feen in the memory of man; and again, in a moment or two, retiring with as much violence to as unufual an ebb; and thus ebbing and flowing for fome hours together, till at last, they gradually retired to their ordinary limits, leaving boats forty yards from them on dry ground, and some of them on the top of a pier three or four feet perpendicular, above any height to which the waters had been known to rife. Nothing uncommon was felt or heard upon land; but, on the contrary, a remarkable calm was over all the country round.

The famous Grampian mountains begin near this

lake, and run northward towards Aberdeen.

The county of Lenox, on which this lake lies, is in length about 24 miles, and in breadth about 20. The lower part is very fertile in corn; the higher is billy, moorish, and more fit for pasture. It is the paternal estate and property of the Stuarts, and extends tland, itself from both fides the Levin; which is the river that enters the Lochlomond into the Clyde. On this fide, eastward, Lenox joins to Monteith, which is part t, but of Perthshire, and runs up for some length on the east ath. Side of the Loch; and on the west-side it extends to partithe edge of the Lochleing; and a great way north,
is, pealmost to the mountains of Lochaber.

This Dunbarton is the county town of Lenoushire. It was
id this once considerable for its trade, which

decayed; but is still remarkable for its castle, one of the strongest by nature in Europe; being secured by the river on one fide, the Firth of Clyde on the other, by an impassable morals on the third, and the fourth is a precipice.

The Roman wall, which begins at Abercorn, runs then to a through this county, and ends at Kilpatrick on Clyde,

a regality of the lord Blantyre's.

We now entered the large and extended country of which the Argyle, part of the West Highlands, commonly called stances of the shire of Inverary, from the principal town, where incite of the duke of Argyle has his residence. It is 120 miles worthy a long, and 40 broad. It joins to Perthshire on the east, Kintyr to Lochaber on the north-east, to the isles on the northwest, and to the Irish sea on the south. west, and to the Irish sea on the south.

west, and to the Irish sea on the south.

At Inverary the duke of Argyle has built a stately polyking It lace, on purpose to indicate what, in so advantageous his count a situation, posterity might do for enlarging and embellishing the town, when industry shall have impeck of large proved the country round about; and the inhabitants from its produce and its sissery, for which it is already very justly samous, have made it, what nature seems to have designed it, the centre of the commerce of the list seems western coast, and of the isser. western coast, and of the isles.

western coast, and of the isles.

A woollen manufactory has been established at he hire of A werary, under the patronage of the duke of Argyle, and his countres feveral of the gentlemen in the country. The duke not only subscribed very liberally, but also built all the nacessary houses for carrying on the different branche of the manufacture, and made a present to the company of all the utensils and implements proper for the purpose. If this patriotic undertaking succeeds, or gryle and which there is sittle doubt, it will be of great advantage, for affording a ready market for the wool in the country, of which there is now a greater quantity the semden, the formerly; the Highland gentlemen having found it not be constructed by a local state of the convertige of their estates into sheep ceffary to convert great part of their estates into sheet

east, Kintyre is a peninsula, which runs 30 miles out into
orththe Irish sea, and is no more than 13, some say 16,
miles from Ireland. Campbell town made a royal burgh
by king William, with a sase harbour for ships, lies in
second his county.

em Knapdale joins to Kintyre on the north, by a narrow
imack of land, scarce a mile over, through which the
tants reple of the country draw their small vessels, to avoid
read siling round Kintyre. It abounds with lakes and bays,
seem everal of which contain islands and castles; and the
of the oil is generally fitter for pasturage than cultivation.

Larn is the pleasantest and most fruitful part of the
at In hire of Argyle. The castle of Dunssange stands in

Larn is the pleasantest and most fruitful part of the at In hire of Argyle. The castle of Dunstafnage stands in his county, formerly a royal seat, where several of the acient kings are buried. The samily of Campbell was all the acient kings are buried. The family of Campbell was all the acient kings are busied. The samily of Campbell was all the long time Lords Justices General of the kingdom; at the long time Lords Justices General of the kingdom; at the same standard, besides having the jurisdiction of regule and the isses; and are still great masters of the advantage in the long time Lords. They derive their suring the same from the castle of Campbell; and, according to same from the castle of Campbell; and, according to same, their pedigree from the ancient kings of Aradician le, by a long series of ancestors. The earl of Loudon, there

the earl of Braidalbin, and other great men, are of this

The whole thire of Argy'e, taking in the above parts, has feven bays of the fea entering into it, called by the inhabitants, Lochs; the chief is Lochfyn, famous for the number and goodness of its herrings: it is faid to be about 40 miles in length, and the narrow. est place about four in breadth. Lochew, according to bishop Lefty, is almost as large as Locklomand, and contains 12 islands, in one of which is the castle of Enconel, in another that of Glerugubart and, where it enters the fea, abounds with falmon. The fea couft of Argyle, or as far as Lochfyn, abounds with high rocks, and black mountains covered with heath, which afford pasturage for black cattle and deer. The black cattle run for the most part wild, but are excellent meat; and their fat, when boiled, does not congeal, as others, but continues for some days like oil. The inhabitants make great profits of them by felling them to the Lowlanders.

From the Mull of Kintyre you fee Ireland very plain, it being not above 15 or 16 miles from the point of land, which they call the Mull, to the Fair Foreland, on the coast of Colrain, on the North of Ireland.

As I have given accounts of feveral public charities, and other laudable institutions, in the southern parts of Britain, it would be inexcusable not to mention the fociety in Scotland, for propagating Christian knowledge in the Highlands, it being one of the worthiel defigns of the present age.

In the year 1701, some gentlemen of Edinburgh first formed the plan of civilizing and reforming the natives of the Highlands, who then lived in a flate of barbarity. The establishing schools at convenient places, appeared to them as the only method of fue ceeding in this laudable attempt. In these schools by safely

In the year 1710, they began to fettle schools in such places as had never been reformed from heathenism; and their capital stock having yearly increased by the beral contributions of many persons of all ranks in Great Britain, which they have laid out upon good courity, they have encreased their schools in proportion. Great care is taken that the schoolmasters are nen of probity, capacity, and well affected to the gomenment; and they are obliged, besides teaching the hildren in the schools, to instruct those in the principles of religion, who are too old to come to school, and at too great a distance from the church. Many opish parents have permitted their children to be intructed.

King George the first lent a helping hand to the prototion of this laudable society, and his late majesty we 1000 l. per annum to extend it, which, I believe, scontinued by his successor to the crown, his pretot majesty.

Before I quit the Highlands it may not be improper pdescribe the dress, character, amusements, &c. of the natives, as given by Mr. Pennant, and some other prious travellers, on whose candour and veracity we

ay fafely depend.

Their

Their brechan, or plaid, confifts of twelve or thirteen yards of narrow stuff, wrapt round the middle, and reaches to the knees. It is often fastened round the middle with a belt, and is then called brechan-feal; and in cold weather, it is large enough to wrap round the whole body from head to foot; and this often is the only cover, not only within doors, but on the veapon upon hills during the whole night. It is frequently fastened on the shoulder with a pin, often of silver, and before with a broche, like the tibula of the Roman, which is sometimes of silver, and both long and expensive. The old ones have very frequently mottos.

The stockings are short, and tied below the knee. The cucranen is a fort of laced shoe made of a skin, lit will with the hairy side out, but now seldom worn. The truish were worn by the gentry, and were breeched by militiand stockings made of one piece.

The silehes, that is, little plaid, also called kelt shich the

and flockings made of one piece.

The fittebeg, that is, little plaid, also called kelt, sich the is a fort of fhort petticoat, reaching only to the knees, and of a modern substitute for the lower part of the loody at plaid, being found to be less cumbersome, especially icalled a in time of action, when the Highlanders used to tuck their brechan into their girdle. Almost all have a great of they pouch of badger and other skins, with tassels dangling enalty of before. In this they kept their tobacco and money.

Their ancient arms were the Lochaber ax, now used by none but the town guard of Eainburgh. It is a treby none but the town guard of Eainburgh. It is a tremendous weapon, better to be expressed by a figure than words.

than words.

They likewise used the broad sword and targets athree he with the latter they covered themselves, and with the latter they covered themselves, and with the latter their enemies at a great distance. These were their ancient weapons; but, since the disarming ad, and act, they are scarcely met with. Partly owing to that, and partly to the spirit of industry now arising among them, the Highlanders, in a few years, will scarcely be tanadars, when we of any weapon. know the use of any weapon.

fastened

Braidal

thirddle, and arrows were used in war as late as the middle of the last century, as I find in the manuscript of the of Sir Ewin Cameron.

The dirk was a fort of dagger stuck in the belt. I requently saw this weapon in the shambles of Invertient is the converted into a butcher's knise. The dirk was a reapon used by the ancient Caledonians; for Dion Castently, in his account of the expedition of Severus, mensiver, ons it under the name of pugio.

The matucashlash, or arm-pit dagger, was worn here ready to be used on coming to close quarters. These, with a pistol stuck in their girdle, completely med the Highlanders.

It will not be improper here to mention the method he chieftains formerly took to assemble the clans for eaches mown place of rendezvous, stiled Caru-a-whin, to hich they must refort on this signal. A person is mown place of rendezvous, stiled Caru-a-whin, to hich they must refort on this signal. A person is mown place of rendezvous, stiled Caru-a-whin, to called crosh-tairie, the cross of shame, or the fiery took: the first, from the disgrace they would undergreat of they declined appearing; the second, from the malty of having sire and sword carried through their puntry in case of refusal. The first bearer delivers it to the next person he meets, he running sull speed to a tree third, and so on. In the late rebellion, it was sent figure young unknown disaffected hand through the county is Braidalbane, and passed through a track of 32 miles a three hours, but without effect.

The womens dress is the kirch, or a white piece of

inguit in the description of the head, and passed three hours, but without effect.

The womens dress is the kirch, or a white piece of the nen, pinned over the foreheads of those that are marming ed, and round the hind part of the head, falling bental, ind over their necks. The single women wear only inband round their head, which they call a snood. he tanac, or plaid, hangs over their shoulders, and fastened before with a broche; but, in bad weather fastened before with a broche; but, in bad weather

Bow

it is drawn over their heads. In the county of Braidelbane, many wear, when in high dress, a great plaited stocking, of an enormous length, called offan. In other respects, their dress resembles that of women of the same rank in England; but their condition is very different, they being little better than slaves to our sex.

The manners of the native Highlanders may, favs Mr. Pennant, be justly expressed in these words : indolent to a high degree, unless roused to war, or to any animating amusement; or, I may fay from experience, to lend any difinterested ashistance to the diff treffed traveller, either in directing him on his way, or affording their aid in passing the dangerous torrents of the Highlands They are hospitable to the highest degree, and full of generofity; are much affected with the civility of strangers, and have in themselves a n. tural politeness and address, which often flows from the meanest when least expected. Through my whole tour, I never met with a fingle instance of national reflection! This forbearance proves them to be superior to the meanness of retaliation. They are excessively inquifitive after your bufiness, your name, and other particulars of little consequence to them. They are most curious after the politics of the world, and when they can procure an old newspaper, will listen to it with all the avidity of Shakspeare's blacksmith. They have much pride, and confequently are impatient of affronts; and revengeful of injuries; are decent in their general behaviour, inclined to superstitions, yet attentive to the duties of religion, and are capable of giving a most distinct account of their faith. In many parts of the Highlands, their characters begin to be more faintly marked; they mix more with the world, and become daily less attached to their chiefs. The clans begin to disperse themselves through different parts of the country, finding that their industry and good conduct afford them better protection, (fince the

due

Most of the ancient sports of the Highlanders, such as archery, hunting, fowling, and fishing, are now disused: those retained are, throwing the putting stone, or stone of strength, as they call it, which occasion an emulation who can throw a weighty one the farthest: throwing the penny stone, which answers to our coits: the shinty, or the striking a ball of wood or of hair. This game is played between two parties in a large plain, and surnished with clubs: which ever side strikes it first to their own goal wins the match.

The amusements by their fire-fides were, the telling of tales, the wildest and most extravagant imaginable: music was another. In former times, the harp was the favourite instrument, covered with leather, and strung with wire; but, at present, it is quite lost. Bagpipes are supposed to have been introduced by the Danes: the oldest are played with the mouth, the loudest and most ear-piercing of any wind music. The other, played with the singers only, are of Iris origin. The first suited the genius of this warlike people, roused their courage to battle, alarmed them when secure, and collected them when scattered. This instrument is become scarce since the abolition of the power of the chiestains, and the more industrious turn of the common people.

Vocal music was very much in vogue among them, and their songs were chiefly in praise of their ancient herces. I was told, that they still have fragments of the story of Fingal and others, which they carrol as they go along. These vocal traditions are the soundstandard the masks of the story of the standard traditions.

dation of the works of Offian.

Vol. IV. M

It would be unpardonable here to omit Dr. Beattie's description of the Highlands, and his remarks on the

fecond fight of the inhabitants.

" The Highlands of Scotland (fays the doctor) are picturesque, but, in general, a melancholy country. Long tracts of mountainous defert, covered with dark heath, and often obscured by misty weather; narrow vallies thinly inhabited, and bounded by precipices, refounding with the fall of torrents; a foil fo rugged, and a climate fo dreary, as, in many parts, to admit neither the amusements of pasturage, nor the labours of agriculture; the mournful dashing of waves along the firths and lakes that interfect the country; the portentous noises which every change of the wind, and every encrease and diminution of the waters, are apt to raise in a lonely region full of echoes, and rocks, and caverns; the grotefque and ghaftly appearance of fuch a landscape by the light of the moon: objects like these diffuse a gloom over the fancy, which may be compatible enough with occasional and focial merriment, but cannot fail to tincture the thoughts of a native in the hour of filence and folitude.

"If these people, notwithstanding their reformation in religion, and more frequent intercourse with strangers, do still retain many of their superstitions, we need not doubt, but in former times they must have been much more enslaved to the horrors of imagination, when beset with the bugbears of popery, and the darkness of paganism. Most of their superstitions are of a melancholy cast: that second sight wherewith some of them are supposed to be haunted, is considered by themselves as a missfortune, on account of the many dreadful images it is said to obtrude upon the fancy. I have been told, that the inhabitants of some of the Alpine regions do likewise lay claim to a fort of second sight, Nor is it wonderful, that persons of lively imagination, immured in deep solitude, and

furrounded with the stupendous scenery of clouds, precipices, and torrents, should dream, even when they think themselves awake, of those sew striking ideas with which their lonely lives are diversified; of corpses, funeral processions, and other subjects of terror; or of marriages, and the arrival of strangers, and such like matters of more agreeable curiosity.

Let it be observed also, that the ancient Highlanders of Scotland had hardly any other way of supporting themselves than by hunting, fishing, or war—professions that are continually exposed to satal accidents: and hence, no doubt, additional horrors would often haunt their solitude, and a deeper gloom overshadow

the imagination of the hardiest native.

"I do not find sufficient evidence for the reality of fecend fight, or at least of what is commonly understood by that term. A treatise on the subject was published in the year 1762, in which many tales were told of persons, whom the author believed to have been favoured, or haunted, with these illuminations; but most of the tales were trisling and ridiculous, and the whole work betrayed, on the part of the compiler, such extreme credulity, as could not fail to prejudice many readers against his system.

"That any of these visionaries are liable to be swayed in their declarations by sinister views, I will not say; though a gentleman of character assured me, that one of them offered to sell him this unaccountable ment for half a crown. But this I think may be said with considence, that none but ignorant people pretend to be gisted in this way. And in them it may be nothing more, perhaps, than short fits of sudden sleep or drowsiness, attended with lively dreams, and arising from some bodily disorder; the effects of idleness, low spirits, or a gloomy imagination: for it is admitted, even by the most credulous Firshlanders, that as knowledge and industry are propagated in their country,

M 2

the fecond fight disappears in proportion; and nobody ever laid claim to this faculty, who was much employed in the intercourse of social life. Nor is it at all extraordinary, that one should have the appearance of being awake, and should even think one's felf fo, during these fits of dosing; or that they should come on fuddenly, and while one is engaged in fome bufinefs. The fame thing happens to perfons much fatigued, or long kept awake, who frequently fall afleep for a moment, or for a longer space, while they are standing, or walking, or riding on horseback. but a lively dream to this flumber, and (which is the frequent effect of difease) take away the consciousness of having been afleep, and a superstitious man, who is always hearing and believing tales of fecond fight, may eafily mistake his dream for a waking vision, which, however, is foon forgotten, when no subsequent occurrence recalls it to his memory; but which, if it shall be thought to refemble any future event, exalts the poor dreamer into a Highland prophet. This conceit makes him more rectuse and more melancholy than ever, and fo feeds his disease, and multiplies his vifions, which, if they are not diffipated by bufiness or fociety, may continue to haunt him as long as he lives, and which, in their progress through the neighbourhood, receive some new tincture of the marvellous from every mouth that promotes this circulation.

"As to the prophetical nature of this fecond fight, it cannot be admitted at all. That the Deity should work a miracle, in order to give intimation of the frivolous things that these tales are made up of, the arrival of a stranger, the nailing of a cossin, or the colour of a suit of cloaths, and that these intimations should be given for no end, and to those persons only who are idle and solitary, who speak Erse, or who live among mountains and deserts, is like nothing in Nature of Providence that we are acquainted with; and must,

enough be ascribed to a distempered fancy; and that in them, as well as in our ordinary dreams, certain appearances should, on some rare occasions, resemble certain events, is to be expected from the laws of chance, and seems to have in it nothing more marvellous or supernatural, than that the parrot, who deals out his scurrilities at random, should sometimes happen to falute the passenger by his right appellation."

We cannot close this letter without observing, what Mr. Pennant, in his Tour in Scotland, has enabled us to notice, that frict fidelity is the distinguishing character of the Highlanders. Two instances, taken from different periods, will be fushcient proof of the high degree, in which they possess this shining virtue. In the reign of James V. when the Clan-chattan had raifed a dangerous infurrection, attended with all the barbarities usual in those days, the earl of Murray raised his people, suppressed the insurgents, and ordered 200 of the principal prisoners to execution. As they were led one by one to the gallows, the earl offered them a pardon, in case they would discover the lurking-place of their chieftain; but they unanimously told him, that, were they acquainted with it, no fort of punishment should ever induce them to be guilty of a breach of trust to their leader.

The other example is taken from more recent and mercenary days. In the year 1746, when the young Pretender preferred the prefervation of an unhappy life by an inglorious flight, to the honour of falling heroically, with his faithful followers, in the field of Culloden, he for five months led the life of a fugitive, amidst a numerous and various set of mountaineers. He often trusted his person to the lowest and most dis-

M 3 folute

folute of the people, to men pinched with poverty, or accustomed to robbery and rapine; yet neither the fear of punishment for affisting the wretched wanderer, nor the dazzling allurement of the reward of 30,000. could even prevail on any one to violate the laws of hospitality, or be guilty of a breach of trust. They extricated him out of every difficulty, they compleated his deliverance, preserving his life for mortifictions more afflicting than the dreadful hardships he suffered during his long slight.

LETTER V.

Containing a particular DESCRIPTION of the Isle of Man, and of the Scottish Isles, both Western and Northern.

I SHALL now proceed to give as brief and accurate an account, as I can give, of the islands of most considerable note, lying adjacent, or belonging to this northern part of the island of Great Britain; beginning, first, with

The Western Isles of Scotland.

THESE islands lie in the Ducaledonian sea, and were called by some, Hebrides. The most southern of them is the Isle of Man; which, from it situation, is very beneficial to Great Britain, by lessening the force of the tides, which would otherwise break upon their coasts with far greater violence than they do at present. In reference to its own advantage, this position is likewise exceedingly commodious

dious

With regard to form, it is long and narrow, firetching from the north-east point of Air to the Calf of Man, which lies fouth-west, at least 30 English miles. In breadth, from Peele Castle to Douglas Point, better than nine miles, in most places eight, in some not sive; between 70 and 80 in extent, and comprehending about 160 square miles: it is equal to the Isle of Wight; surpassing it in its size, by a third, Guernsey, Jersey, and all the adjacent isles; superior to any of the Leeward islands; very little inserior to Guadaloupe, and twice as big as St. Helena.

The air is sharp, as may be expected from the openness of the country; but the winters are not severe. Frosts happen seldom, and are of no great continuance, neither does snow lie long upon the ground; but they are frequently exposed to high winds, and at other seasons to mists, which, though they may be a

little offensive, are not at all unwholesome.

The foil towards the north is dry and fandy, confequently unfertile, but not unimprovable. The mountains, which may include near two-thirds of the island, are bleak and barren, yet not either worthless or useless; for they afford excellent peat, contain in their bowels several kinds of metals, and maintain a peculiar breed of small swine, called purrs, which are esteemed excellent pork. In the vallies there are as good pastures, hay, and corn, as any of the northern counties; and as for the southern part of the isle, it is as fine ground as can be wished. Some of their M 4

mountains are remarkably high, fuch as the two Bar. rowls, Skeyall, the watch Hill of Knockalow, but above all Sceafel, Sneafield, or Snawfeldt, from the fummit of which the coasts of England, Scotland, Ireland, and Wales, may be plainly differend. Few countries can boast of more brooks and rivulets, over several of which there are stone bridges, or of better water; and from hence also they derive the conveniency of mills for grinding their corn, and for the use of the

woollen manufacture.

The produce of this island furnishes all the necessaries, and, with due attention and application, might fupply all the conveniences of life. They have the best fort of peat in abundance, which supplies the want of coals. They have marle and lime-stone sufficient to render even their poorest lands fertile; admirable flate, rag stone, black marble, and some other kinds for building; lead, iron, and copper, which might turn to great advantage. They have vegetables of all forts, and in the utmost perfection; potatoes in immense quantities, and, where proper pains have been taken, they have tolerable fruit; to which we may add fome hemp and flax. Large crops of oats, and the like also of barley, which makes good malt, and fome wheat, hogs, sheep, goats, black cattle, and horses, they have in plenty, and though small in fize, yet with due care, and, if the country were thoroughly and skilfully cultivated, they might improve the breed of all these animals, as experience in some instances has shewn. Rabbits and hares, which are singularly fat and fine; tame and wild fowl in plenty. rivers furnish them with falmon, trout, eels, and other kinds of fresh-water fish; on their coasts are caught cod, turbot, ling, halibut, and all forts of shell-fish, oysters excepted, which are scarce, but large and good, and herrings, of which they anciently m much

The commodities of Man are not many in number, and few or none of any great value. Their flates are efteemed not inferior to any; their black marble is very hard, and bears a fine polifh; and they occasionally export some of each, as they formerly did a little grain, and a considerable quantity of ale; but of late years both have been sound hardly equal to their home consumption. The rest are lambs wool, hides, tallow, sish, oil, wax, and honey. They are allowed, by act of Parliament, to send over 600 head of black cattle to the port of Chester.

In respect to manusactures, they have both woollen and linen, which however turn but to very small account. With regard to the former, they make a kind of cloth of a buff colour, without dying, of what is called Laughton wool, from a particular breed of sheep, of which they take little care, otherwise they might have much more of it. In reference to the latter, both fine and coarse linens are wove here, but in no great quantities. In former times, they depended chiefly on their herring sishery, and are said to have exported annually 20,000 barrels of these sish to France.

The town of Douglas, anciently and better written Dufglas, on the east side of the isle, is the largest, sichest, and most frequented place in Man. It has a good port secured by a mole, where ships of a considerable burthen may lie safe; and, of late years, there have been great improvements made, and many cellars, warehouses, and other conveniences, for the reception of goods; but the streets are still narrow, and in that respect troublesome.

Ramfivay, now called Derby Haven, covered by a foit built in St. Michael's ifland, is convenient enough for small vessels, and without there is a good road,

M 5 where

where large ships may ride safe from north or west

winds, in 10, 12, or 14 fathom water.

About a mile from hence stands Cassletown, so called from Castle Russyn, which is accounted the capital of the isle, because the governor and most of the lords officers reside there. It has also a creek, which serves as a port for small vessels, and a bay without that, but foul and unsafe.

Peele, or Holm, on the west side of the island, was formerly remarkable only for its cathedral, and castle on a rock, which is very strong, and in which there is a small garrison; but now the place is much enlarged, many new houses built, and has a brisk stir-

ring trade.

Ramsea, on the north-east side of the island, has a very spacious bay, where the largest ships may ride safe from most winds, and not liable to be embayed by any. It is generally a high land upon the seacoasts, defended by rocks lying out as far as low-water mark: on the north-east shore it is a bold coast

and beach.

The inhabitants of Man, though far from being unmixed, were perhaps, till within the course of the current century, more so than any other under the dominion of the crown of Great Britain; to which, though they are subjects, and very proud of being such, as well as the people of fersey and Guernsey, yet like them they have a constitution, laws, and language of their own, and a peculiarity of manners, naturally resulting from the long enjoyment of their privileges. In ancient times, they were distinguished by their stature, courage, and skill in maritime affairs; for in those days they had a considerable foreign commerce, and a sleet, which would appear insignificant indeed in our times, but was very respectable then, in comparison of the naval force of neighbouring nations.

fan

They are at this day, a brifk, lively, hardy, industrious, and well-meaning people. Their frugality defends them from want; and though there are few in affluence, yet there are still less in distress, and those that are, meet with a chearful and unconstrained relies. On the other hand, they are choleric, loquacious, and as law is cheap and unincumbered, at least till of late years, with attornies and follicitors, not a little litigious. A tolerable education, a strict civil government, and a more strict church discipline, ripen good habits into virtues, and restrain their vices within due bounds.

As to the revenue arising to the lord of Man, it was looked upon as certain, that the earl of Derby's settled standing rents, his casualties, and his customs upon the goods requisite for the use of the natives, might amount to 2,500%, a year, from whence deducting his civil list, which rose to about 700%, there remained 1,800%, per annum clear: the number of his

subjects was computed at 20,000.

There is no doubt, that in ancient times, the inhabitants of this island must have possessed a very extensive commerce, otherwise they could not have had either arts, wealth, or a potent sleet; and there is as little soom to doubt, that as these advantages were acquired by, so they gradually decayed with the loss of their commerce, which brought the people into a

state of abject poverty.

James earl of Derby, being himself in the island, considering its situation, and contemplating its other natural advantages, was so sensible of this, and so much affected by it, that he affured his son, he would rather mortgage and sell some of his lands in England, than not execute the schemes he had formed, for restoring the trade of Man. He wisely foresaw, that this would be equally beneficial to his subjects and his samily; that it would excite the people to improve

prove their lands, encourage the fetting up of manufactures, and quicken every species of industry among them; but the diforders of the times, for this was at the beginning of the civil wars, defeated his good intentions; nor does it appear that they were refumed, or at least resumed to any purpose, by his successors.

It is little more than half a century ago, when the fatal practice of fmuggling was brought in, which has been making a very rapid progress ever since; and as every where else, so in this island, it has been attended with a numerous train of the most mischievous consequences. It was first introduced by foreign vessels landing their cargoes here, in order to elude the laws made for the benesit of British commerce, and by these means immense sums have been drained from these kingdoms. The goods thus landed are, from the convenient position of the isle, exported again in prodigious quantities, in barks and boats, into Wales, England, and Scotland, to the almost incomputable detriment of the revenue of the crown, and to the extreme prejudice also of the fair trader. But independent of these injuries to their fellow-subjects, it seems also to be in a fair way of becoming destructive to the island itself, by corrupting the manners of the inhabitants, and divesting them of all thoughts of homest improvements. It is very possible, that the computations made of the losses sustained by these practices, may be much exaggerated, since these have been swelled to upwards of half a million per annum*.

The isle of Bute is about twenty measured miles long; the breadth unequal, perhaps the greatest is five miles. It is fruitful in corn and pasturage. It has a laces, where the last of the Tracture many way. has been making a very rapid progress ever fince;

roval burgh, called Rothfay, with an ancient castle. From this the royal family of Stuart is supposed to derive its origin: and duke of Rothfay is now one of the titles of the prince of Wales. It has another castle, called the castle of Kermes, and sour churches. This island lies in the mouth of the Clyde, eight miles west from Arran; and is remarkable for its herring fishing. The isle of Bute gives title of earl to a branch of the called the castle of Kermes, and four churches. This noble family of Stuart, who is the chief proprietor, and heretable coroner of the island, and has a feat at hiev- Rosa; as Callartine has at Kermes, and Stuart of Ascog reign another. Queen Mary, before she married lord parnley, conferred upon him the title of duke of Rothfay. Near Bute are two small islands, called from Great and Little Cumbrays, the property of the earl of

from Great and Little Cumbrays, the property of the earl of from Glasgow.

In in The seat of the earl of Bute (says Mr. Pennant) is a Wales, modern building, with a handsome front and wings:

the situation very fine, on an eminence in the midst of a wood, where trees grow with as much vigour as in the more southern parts, and extend far beneath on each side. Throstles, and other birds of song, fill active the groves with their melody: nothing disturbs their farmony; for instinct, often stronger than reason, forbids them to quit these delicious shades, and wancomber, like their unhappy master, into the ungrateful practical wilds of ambition.

The air is in general temperate: no mists or thick soum*. The air is ingeneral temperate: no mists or thick onling sogs from the sea, (called in the north a haile) wer insested this island. Snow is scarcely ever known is sive to lie here; and even that of last winter, (1771) has a to remarkable for its depth and duration in other

has a premarkable for its depth and duration in other laces, was in this island scarcely two inches deep. The evils of this place are winds and rains, the last oming in deluges from the west.

When the present earl of Bute came to his estate,

he farms were possessed by a set of men, who carried

on

on, at the same time, the profession of husbandry and fishing, to the manifest injury of both. His lord. ship drew a line between these two incongruent employs, and obliged each to carry on the business he preferred, distinct from the other; yet, in justice to the old farmers, notice must be taken of their skill in ploughing, even in their rudest days; for the ridges were strait, and the ground laid out in a manner that did them much credit. This new arrangement. with the example given by his lordship of enclosing; by the encouragement of burning lime for some, and by transporting gratis to the nearest market, the produce of all, has given to this island its present flourishing aspect. Such indisputable talents has his lord-Thip for the government of little islands.

The isle of Arran, which with Bute makes up one sheristidom, lies also in the mouth of the Clyde, 24 rent, of miles in length, and near 16 broad; fruitful in corn tance of and pasturage. It is very well inhabited on the coast, and is a safe and good harbour, covered by Lamlash, is commor the Holy-Isle. It has two churches, and several thus a second control of the same and pasturage. It is very well inhabited on the coast, or the Holy-Isle. It has two churches, and feveral thus a castles, of which that of Brodich is the strongest and ent peo most noted, and is the residence of the Hamilton sand several rivers in it, which abound with salmon, as the village. The climate of this island is very severe; for besides the violence of winds, the cold is very rigorous, and show lies here in the vallies for many weeks together. In the summer, the air is remarkably salubrious, and many invalids resort here on that account much contain the whey of goat's milk.

and to drink the whey of goat's milk.

The principal disease here is the pleurify; small-fistence, pox, measles, and chin-cough visit the island once in ter. To seven or eight years. The practice of bleeding twice farm is every year seems to have been intended as a preserva-

tive a with t of Ha feason his ap the op hole n the vit Th

laid af and, c added genera. be spar ing giv

the E

tive

tive against the pleurify; but it is now performed. with the utmost regularity, spring and fall. The duke of Hamilton keeps a furgeon in pay, who, at those feafons, makes a tour in the island. On notice of his approach, the inhabitants of each farm affemble in the open air, extend their arms, and are bled into a hole made in the ground, the common receptacle of the vital fluid.

The men are strong, tall, and well made; all speak the Erfe language, but the ancient habit is entirely laid afide. Their diet is chiefly potatoes and meal; and, during winter, fome dried mutton or goat is added to this hard fare. A deep dejection appears in general through the countenances of all: no time can be spared for amusement of any kind, the whole being given for procuring the means of paying their rent, of laying in their fuel, or getting a fcanty pit-

tance of meat and cloathing.

The method of letting a farm is very fingular. Each is commonly possessed of a number of small tenants: thus a farm of 40% a year is occupied by 18 different people, who by their leases are bound, conjunctly ton fa-es title prietor. They live on the farm in houses clus-has se-tered together, so that each farm appears like a little as the village. The tenants annually divide the arable land by lot: each has his ridge of land, to which he puts by lot: each has his ridge of land, to which he puts or be his mark, fuch as he would do to any writing; and grous, this species of farm is called run-rig, that is ridge. s toge They join in ploughing: every one keeps a horse or y salumore; and the number of these animals consume so count, much corn as often to occasion a scarcity, the corn and peas raised being, much of it, designed for their subfmall fiftence, and that of the cattle, during the long win-once in ter. The pasture and moor land annexed to the g twice farm is common to all the possession in general.

All the farms are open: inclosures of any form,

except.

except in two or three places, are quite unknown. So that there must be a great loss of time in preserving their corn, &c. from trespass. The usual ma

nure is fea-plant, coral, and shells.

The run-rig farms are now discouraged; but since the tenements are set by roup, or auction, and advanced by an unnatural force to double the old rent without any allowance for enclosing, any example se in agriculture, or any security for tenure by lengthening the leases, affairs will turn retrograde, and the farms relapse into their old state of rudeness: migration will encrease, (for it has begun) and the rents be reduced even below their former value. The late rents were scarce 1,200 l. a year; the expected rent 3,000 l.

Hogs were first introduced here about the year 1772. The foil produces oats, peas, and potatoes.

The women manufacture the wool for the cloathing of their families; they fet their potatoes, and drefs and fpin the flax. They make butter for ex

portation, and cheefe for their own use.

The inhabitants in general are fober, religious, and industrious. Great part of the summer is employed in getting peat for suel, the only kind in use here; of in building or repairing their houses, for the hadnes of the materials requires annual repairs. Before an after harvest they are busied in the herring sistery and during the winter the men make their herring nets, while the women are employed in spinning their linen and woollen yarn. The light they often use that of lamps. From the beginning of February to the end of May, if the weather permits, they are engaged in labouring their ground; in autumn they burn a great quantity of fern to make kelp. So that excepting at new-year's day, at marriages, or at the two or three sairs in the island, they have no leisure

On one part of the island, we descended through a parrow cleft of a rock to a part of the western shore, called Druim-an-duin, or the ridge of the fort, from a round tower that stands above. The beach is bounded by cliffs of whitish grit stone, hollowed beneath into vast caves. The most remarkable are those of Fin-mac-cuil, or Fingal, the son of Cumbal, the sather nd the of Osian, who, tradition fays, refided in this island for the fake of hunting; one of these caverns is 112 feet long, and thirty high, narrowing to the top like a Gothic arch; towards the end it branches into two. Within these two recesses, which penetrate far, are on each fide feveral small holes, opposite to each other. In these were placed transverse beams, that held the pots, in which the heroes feethed their venifon; or probably, according to the mode of the times, the , and bags formed of the ikins of animals flain in the chase, which were filled with flesh, and served as kettles sufficiently strong to warm the contents; for the heroes of old devoured their meat half raw, maintaining, that the juices contained the best nourishment.

Near the isle of Arran is Flada, a small island,

which abounds with rabbits.

South-west from Bute lies Mernoch, about a mile

long, and half a mile broad, fruitful in corn.

Now we are upon the western-coasts, I shall menion, that, in the month of August 1740, an attempt was made by diving, to come at one of the largest hips of the Spanish Armada, stranded in 1588, on these coalts. Another was dived for some years ago; but he fand being loofe, it turned to little or no account. The other, which was loft near Portinerofs, was begun to be fearched after by Sir Archibald Grant, and capain Roe, in August 1740, and the following was the account that was transmitted to us; which we the ra-

ther infert, as it gives some notion of the operation by

the diving-engine.

The country-people had preferred, by tradition, the spot pretty near where she funk, and gave them all the information they were able: immediately the divers went to work, and swept for her, which they do thus: they have a long line which they fink with leads, one end of the rope is fixed to one boat, and the other end to another; they row, and whatever interrupts them, the diver goes down to make a disco- the Lev very. They foon happened on the place where the Thip lay, which is fcarce a quarter of a mile from the shore, in ten sathom and a foot water. Captain Rat if you a immediately went down, and found the vessel to be will rea very entire; to have a great number of guns on board, but to be full of fand. The first thing he fixed upon even the was a cannon, which lay upon the sand at the head of equal w the ship: to this he fixed his tongs, which are made into a position of strong bars of iron; they are open, when they are hours go let down, and have teeth, which join into one another. As foon as they are fixed upon any thing, he gives the fignal, when they are made to shut; and the heavier the subject, the closer they hold. The cannon was drawn up with a good deal of difficulty: it measures full nine feet, is of brass, greenish coloured, but nothing the worse. On the breech there is a rose, with an E on the one side, and an R on the other, with this inscription, Richard and John Philips, brethren, made this piece, anno 1584. But we may be allowed to observe, that by the E. R. on the cannon, which denotes Eliz. Regina, and the rose, as also the English inscription of the makers, it should seem to us, that it could not belong to the Armada; but rather to some English ship, that might have been call away there. Ten of these brass cannon, and ten iron ones, have been fince carried into Dublin; and they hope to recover 60 out of this ship. The guns were

Several people have scraped the iron guns, which are as mouldy as bricks; and, by keeping the metal some time in their hands, it grows so hot, that they are not able to bear it; but when it is exposed two or three hours in open air, it loses all its burning quality. This is accounted for in the following manner, viz.

Dr. Tournefort, a French physician, in his Voyage to the Levant, part I. says, It is certain that the filings of iron, steeped in common water, will grow considerably warm, and much more so in sea-water. And, if you mingle therewith some sulphur powdered, you

will really fee this mixture burn.

Sir Isaac Newton, in his Optics, p. 354, says: That even the gross body of sulphur, powdered with an equal weight of iron filings, and a little water, made into a paste, acts upon the iron; and in five or six hours grows too hot to be touched, and emits a flame.

Now it is certain, that cast-iron contains a great deal of bitumen, or sulphur, in its composition; and that iron in its sensible quality effects heat, and cannot be perceived without the admission of air; which is the reason why the scrapings should grow hot, although the guns are actually cold to the touch.

We quitted the isle of Arran, weighed anchor, and going through the south passage of the harbour, got into the middle of the Firth. Here we had a magnificent view on all sides of Arran and Lamlash, and the coast of Cantyre on one side, and of the coast of Cuningham and Carrick on the other. In front lay the hills of Galloway and the coast of Ireland; and the vast crag of Ailsa, appearing here like an inclined haycock, rose in the midst of the channel. In our course, we lest to the west the little and low island of Plada, opposite to, and as if rent from that of Arran.

After

After a very tedious calm, we reached the crago Ailfa, and anchored on the north-east, within fifth yards of the fide, in twelve fathom of water, gravelly from the edges of the precipice, the mountain assume the base is two miles. dous and amazing affemblage of precipitous columns rocks of great height, rifing in wild feries one above the other. Beneath these, amidst the ruins that had fallen from time to time, are groves of elder trees the only trees of the place, the floping furface being almost entirely covered with fern and short grass.

The quadrupeds that inhabit this rock are goats and rabbits: the birds that neftle in the precipices an numerous as swarms of bees, and not unlike themis their flight to and from the crag. On the verge of the precipice dwell the gannets and the shags. Beneat are the guillamots, and the razor bills; and unde them the grey gulls and kittiwaks, helped by the cry to fill the deafening chorus. The puffins mad themselves burroughs above; the sea pies found; feanty place for their eggs near the base. Some land birds made this their haunt: among them ravens hooded crows, pigeons, wheat ears, and rock larks and what is wonderful, throstles exerted the same me lody in this feene of horror as they do in the grove of Hertfordsbire.

Three reptiles appeared here very unexpectedly the naked black fnail, the common, and the ftripe shell snail: not volunteer inhabitants, but probably brought in the fallads of some visitants from the

neighbouring shore.

This rock is the property of the earl of Caffils, who rents it for 331. per annum to people, who come her to take the young gannets for the table, and the other

aught for exportation. With much difficulty we afcended to the caftle, a quare tower of three stories, each vaulted, placed retty high on this only accessible part of the rock. The path is narrow, over a vast slope, so ambiguous hat it wants but little of a true precipice: the walk shorrible, for the depth is alarming. It would have ten thought, that nothing but an eagle would have ixed his habitation here; and it was probably some hieftain not less an animal of rapine. The only nark of civilization I faw in the castle was an oven: conveniency which many parts of North Britain are

et strangers to. We made a hearty dinner under the shade of the affle, and even at that height procured fine water om a fpring within 100 yards of the place. new of the bay of Girvan, in Carrick, within nine niles, and that of Cambletown, about 22, bounded

The

voyage, or of gratitude for a fafe return.

Near the isle of Bute lie two islands, called Cumbra, the Greater and Leffer; the first is about a mile in length, has a church in it, and a well, the waters of which are reckoned, by the natives, good against all diseases: the other island is less; and both belong to Montgomery of Skelmerly; the larger is fruitful in corn, and the smaller abounds with deer.

About a mile from the promontory of Kintyre lies Avona, which fignifies a good harbour. The Dane Suppose, came hither with their fleets, when they were mal-

ters of the ifles.

The next remarkable island is Gigaia, four miles from Kintyre, fix miles in length, and a mile and an half in breadth. The inhabitants are Protestants. There is a church in this island, and a sepulchre for the Mac Neils, the proprietors of it. Corkir, which dyes a crimfon colour, and *Croffil*, which dyes a philamort, grow upon the stones here. The soil is good from the for pasture and arable. They have also a medicinal Necessian for pasture and arable. They have also a medicinal well, which they esteem a catholicon.

A quarter of a mile fouth lies Cary, about a mile in compass, has good pasturage, and abounds with rab-

bits. It belongs to the family of Macalifler.

Jura, the most rugged of the Hebrides, is reckoned to be about 34 miles long, and in general 10 broad, erior to except along the found of May. It is composed chiefly of vast mountains, naked, and without the possibility of cultivation. Some of the southern and a little of the western sides only are improvable; it is therefore natural to suppose, that this island is ill peopled, estated acrous, for the suppose of th pecially

This island feems to have changed masters more than once: at present, Mr. Campbell, by purchase from Mr. Campbell of Shawfield, Mr. Mac-neile of Colanfay, and the duke of Argy'e, divide this mass of

weather-beaten barrenness among them.

The produce of this island is about three or 400 head of cattle, fold annually at 31. each, to graziers who come for them. About 100 horses are fold annually. Here are a few sheep with fleeces of most excellent fineness, and numbers of goats. In good seafons, fufficient bear and oats are raifed as will mainain the inhabitants; but they fometimes want, I suppose, from the conversion of their grain into whifkey. The chief food of the common people is potatoes and fish, and shell-fish; and it is to be feared, that their competence of bread is very small.

Fern ashes bring in about 1001 a year; about 200 uns of kelp is burnt annually, and fold from 31. 10s. o 41. per tun. Sloes are the only fruits of the island. An acid for punch is made of the berries of the mountain-ash, and a kind of spirit is also distilled

from them.

Necessity has instructed the inhabitants in the use f native dyes. Thus the juice of the tops of the eath, boiled, supplies them with a yellow; the roots the white water-lily with a dark brown; those of he yellow water-iris, with a black, and the galium veum, rù of the islanders, with a very fine red, not in-

erior to that from madder.

The quadrupeds of Jura are about 100 stags, some rild cats, otters, stoats, rats, and seals. The feahered game, black-cocks, grous, parmigans, and nipes. The stags here must have been once more nu-nerous, for the original name of the island was, the Isla of Deer, so called by the Norwegians from the abundance of those noble animals.

The women are very prolific, and very often bear twins. The inhabitants live to a great age, and are fithe the liable to very few distempers. Men of ninety work, alt, when and there is now living (1772) a woman of eighty that the can run down a sheep. The account given by the lives lay Mr. Martin of Gillour Mac-Crain was confirmed to me. His age exceeded that of either Jenkins or Par for he kept 180 Christmases in his own house, and died in the reign of Charles I.

This parish is supposed to be the largest in Gra Britain, and the duty the most troublesome and dan pening gerous: it consists of Jura, Colonsay, Oransay, Skar inch two ba, and several little is divided by narrow and dan rucked gerous sounds, forming a length of not less than 6 milute miles, and supplied only by one minister and an all to blan

Superstitions are observed here to this time. The old women, when they undertake any cure, mun be little ble certain rhythmical incantations; od, like the ander the cients, endeavour decantare dolorem. They preferre flick of the wicken-tree, or mountain-ash, as a partection against elves.

tection against elves.

After dinner, we walked down to the found of llay, and visited the little island of Frucklan, near the floor, and a mile or two from the eastern entrance. On the top is a ruined tower of a squar in, a tate form, with walls nine feet thick. On the west side of the rock on which it stands is cut through to a vaste, depth, forming a foss, over which had been a draw bridge. This fortress seemed as if intended to guar the mouth of the sound, and was also the prison when the Mac-Donalds kept their captives, and in old time was called the Castle of Claigt. was called the Castle of Claigs.

We rode along the shore of the found, took a be ewest-sat the ferry, and went a mile more by water. O minatir othe so

fura side we saw some sheelins, or summer huts for patherds, who keep here a flock of 80, for the fake

abun

n bear

on bear of the milk and cheefes. The last are made without work alt, which they receive afterwards from the ashes of eating the tang, and from the tang itself, in which the natives lay it.

We landed on a bank covered with sheelins, the abitations of some peasants, who attend the herds of the peasants of the series of the strength of the little of the strength o nich cows. There formed a grotelque group: some rere oblong, many conic, and so low that entrance is sorbidden, without creeping through the little pening, which has no other door than a sagget of irch twigs placed there occasionally. They are connucted of branches of trees, covered with sods; the miture a bed of heath, placed on a bank of sod; we blankets and a rug, some dairy vessels; and above, entain pendent shelves, made of basket-work, to hold the cheese, the produce of the summer. In one of little conic huts, I spied a little insant assept, ander the protection of a faithful dog.

We crossed a large plain of ground on soot, seemingly improvable, but covered with deep heath, and resetly in a state of nature. After a walk of sour is les, we reached the Paps, and less the smaller to be south-east, preferring the ascent of the greatest, there are three. We began to ascend this mounted of vast stones, slightly covered with mosses near the base, but all above bare, and unconnected with the other.

We gained the top, and sound our satigues sully compenced by the grandeur of the prospect from this blime spot. Fura itself afforded a stupendous scene rock, varied with innumerable little lakes. From the lakes west-side of the hill ran a parrow stripe of rock.

blime spot. Jura itself afforded a stupendous scene sock, varied with innumerable little lakes. From k a ba e west-side of the hill ran a narrow stripe of rock, or. 0 minating in the sea, called the Slide of the Old Hag.

Jun othe south appeared Ilay, extending like a map be-VOL. IV.

neath us; and beyond that, the North of Ireland; to the west, Gigha and Lara, Cantyre and Arran, and the Firth of Clyde, bounded by Airshire; an amazing track of mountains to the north-east, as far as Benlomond; Sharba finished the northern view; and over the Western Ocean were scattered Colonsay, Mull, Jona, and its neighbouring group of isles; and still farther, the long extents of Firey and Col just appa-

Even this vast heap of stones was not uninhabited: a hind passed along the sides full speed, and a brace of ptarmigans often favoured us with their appearance, even near the fummit. The other paps are feen very diffinctly, each inferior in height to this, but all of

the same figure, perfectly mamillary.

Lismore is about nine miles long, and one and a half broad, and is extremely fertile in oats and bear, The parts that are not arable are filled with the tips of sharp rocks, peeping above the furface. The land

is in general low, and the strata limestone.

Here is a church of modern but mean building, and in the church-yard are two or three old tombs, with clymores engraven on them. Here is also a remark able tomb, confifting of nothing more than a thick log of oak. On a live rock is cut the radii of a dial but the index is loft.

This island had been the lite of the bishop of Argyle the fea was disjoined from that of Dunkeld about the year 1200, at the request of John the Englishman bishop of that diocese. There are no reliques of the

cathedral, or of the bishop's house.

Bernera, formerly a fanctuary in popish times, ha a noble wood of yew. In this ifle, which is fir miles in circumference, and lies about two league to the fouth of Harries, is a fresh-water lake, called Lockbruift, where many land and sea-fowl build.

The isle of *llay* is of a square form, deeply indented on the south by the great bay of *Loch-anidaal*, divided from Jura, on the north-east, by the sound, which is near sourteen miles long, and about one broad. The tides are most violent and rapid; but the channel is clear, excepting at the south entrance, where there are some rocks on the Jura side.

The length of this island, from the point of Ruval to the Mull of Kinoth, is twenty-eight miles, and is divided into the parishes of Kildalton, Killarow, Kilbonian, and Kilmenie. The face of the island is hilly, but not high, and the land in many parts is excellent, but much of it is covered with heath, and absolutely

in a state of nature.

It produces corn of different kinds, such as bear and oats; but a ruinous distillation prevails here, to so great a degree, that it is supposed more of the bear is drank in the form of whisky, than eaten in the shape of bannocs. Wheat has been raised with good success, in an enclosure belonging to the proprietor; but in an open country, where most of the cattle are suffered to go at large, it is impossible to cultivate that gain, and the tenants are unable to enclose. Much sax is raised here, and 2000 so worth sold out of the sland in yarn, which might better be manusactured on the spot, to give employment to the poor natives.

The natives are a fet of people worn down with potenty; their habitations are feenes of mifery, made of
conference, without chimpies, and without doors, extepting the faggot opposed to the wind at one or other
of the apertures, permitting the smoke to escape thro'
be other, in order to prevent the pains of suffocation.
The furniture perfectly corresponds. A pot-hook
angs from the middle of the roof, with a pot pendent
wer a grateless fire, filled with fare that may rather be
alled a permission to exist, than a support of vigorous

N 2

life: the inmates, as may be expected, are lean,

withered, dufky, and fmoke-dried.

Though the land is exceeding good, yet they im. port annually a 1000 l. worth of meal; and there have been instances in which they have been threatened with a famine. Ale is frequently made in this island of the young tops of heath, mixing two thirds of that plant with one of malt, fometimes adding hops. The country is bleft with fine manures; for befides feawrack, coral, shell-sand, rock and pit marle, it posfesses a track of thirty-fix square miles of limestone. What a pity it is, that these inexhaustible sources of wealth and plenty to this island should be wholly neglected!

Numbers of cattle are bred here, and about 1700 are annually exported at the price of 21. 10s. each. The island is often overstocked, and numbers die in March for want of fodder. None but milch cows are housed; for cattle of all other kinds, except the saddle horses, run out during winter.

The air is less healthy than that of Jura. The epidemical distempers are dropsies and cancers, undoubtedly the natural effects of bad food. Here are weafels, otters, and hares; eagles, falcons, and black and red game; plaice, dabs, dragonet, and other fift;

and vipers fwarm in the heath.

The power of fascination is as strongly believed here, as it was by the shepherds of Italy in times of tun of to old; but here the power of the evil eye affects more the milch cows than lambs. If any good housewise perceives the effects of the malicious on any of her kine, she takes as much milk as she can drain from the enchanted herd, for the witch commonly leaves very little. She then boils it with certain herbs, and adds to them flints and untempered steel: she then secures the door, and invokes the three sacred persons. This with great the witch into such an agony, that the comes will be because the same and the comes will be seen as the same and the comes will be seen as the same and the comes will be seen as the same and the comes will be seen as the same and the comes will be seen as the same and the comes will be seen as the same and the comes will be seen as the same and the comes will be seen as the same and the comes will be seen as the same and the comes will be seen as the same and the comes will be seen as the same and the same as t puts the witch into such an agony, that she comes nilling

ling-willing to the house, begs to be admitted, to obtain relief by touching the powerful pot. The good woman then makes the terms, the witch restores the milk to the cattle, and in return is freed from her pains. But sometimes, to fave the trouble of those charms, (for it may happen that the disorder may arise from another cause than an evil eye) the trial is made by immerging in milk a certain herb, and, if the cows are supernaturally affected, it instantly distils blood.

We vifited the mines, carried on under the direction of Mr. Frebairn, fince the year 1763. The one is of lead, much mixed with copper, which occafions expence and trouble in the feparation. veins rife to the furface, have been worked at intervals for ages, and probably in the time of the Norwegians, a nation of miners. The old adventurers worked by trenching, which is apparent every where. trenches are not above fix feet deep, and the veins which opened into them, not above five or fix inches thick, yet, by means of some instrument, unknown to us at prefent, they scooped or picked out the ore with good fuccess, following it in that narrow space to the length of four feet.

The veins are of various thickness, the strings numerous, conducting to large bodies, but quickly exhausted. The lead ore is good; the copper yields 33 pounds per hundred, and 40 ounces of filver from a tun of the metal. The lead ore is melted in an air furnace near Freeport, and as much fold in the pig as, fince the first undertaking by this gentleman, as hath

brought in 6 or 7000 l.

A small quantity of quickfilver hath been found in the moors, which ought to encourage a further search.

In some parts of this island, particularly at Dounvallan, are scattered small holes, formed in the ground, large enough to hold a man in a fitting posture. The top is covered with a broad stone, and that with earth. Into these unhappy sugitives took shelter after a defeat, and drawing together fods, found a temporary concealment from enemies, who, in early times, knew not the giving or receiving of quarter. The incursions of barbarians are always short, so that the fugitives could easily sublist in their earths till the danger was over. Men were then almost in a state of nature; How strong was their resemblance to beasts of prey! The whole scenery of this place was unspeakably iavage, and the inhabitants of Doun-vallan, and its neighbourhood, fuitably adapted thereto. Falcons screamed incessantly over our heads, and we disturbed the eagles perched on the precipice.

The island of Oransay is three miles long, the south part low and sandy, and the rest high and rocky. It is divided from Golonsay by a narrow sound, dry at low water. This island is a single farm, yielding bear, sand much potatoes, which are left in their beds the whole winter, covered with sea-wrack to protect them from the frost. Sixty milch cows are kept here, and in the year 1774, eighty head of cattle were sold from the island at 31. each. Some butter and cheese

are also exported.

This island is rented by Mr. Mac Nei'e, brother to the proprietor of both islands. The rent is not more that 40 l. a year, yet the farm employs a number of fervants.

Here are the ruins of an ancient monastery, founded, as some say, by Columba, but more probably by one of the Lords of Isles, who fixed here a priory of regular canons of Augustine, dependent on the abbey of Estimates

red in Edinburgh. The church is 59 feet by 18, and contains the tombs of numbers of the ancient aflanders, two of warriors recumbent, seven feet long: a flattery perhaps of the sculptor, to give future ages exalted notions of their prowess. Besides these, are scattered over the floor smaller sigures of heroes, priests, and semales, the last seemingly of some order; and near them is a sigure cut in stone, of full size, apparently an abbess.

The feals are here numerous, and a few are caught in nots placed between these rocks. The great species is taken on Du-hirtoch, a great rock about a mile round, ten leagues to the west, reported to be the

nearest of any to America.

We croffed the found at low water, and entered the illand of Colonfay, which is 12 miles long, three broad, and full of rocky hills, running transversly, with variety of pretty meandring vales full of grafs, and most excellent for pasturage, even the hills having plenty of herbage mixed with the rock. The vallies wans inclosures and woods, the common defect of all the Hebrides. They yield bear and potatoes: much of the first is used in distillation, to the very starving of the islanders, who are obliged to import meal for their subfistence. About 220 head of cattle are annually exported at 31. each. In 1736, the price was only 11. 55; but the rife commenced two years after the rebellion. Yet even this advance does not enrich the people of this pretty island, for their whole profit is exhausted in the purchase of bread, which their own industry ought to supply.

The foil produces oats and bear, and 40 or 50 tuns of kelp are annually made in both islands; but the poverty of the inhabitants prevents them from using the very means Providence has given them of raiting a comfortable subsistence. They have a good soil, plenty of limestone, and sufficient quantity of peat. A sea

N 4

abound-

abounding with fish; but their distressed situation dif. ables them from cultivating the one, and taking the other. These two islands contain 8400 acres, of which about 2600 are arable. How inadequate then is the produce of cattle, and how much more fo is that of corn! Neither frogs, toads, nor vipers are found here, nor any kind of ferpent, except the harmless

blind worms.

North-east from Isa lies the Isle of Mull, 24 miles in length, and near as much in breadth. It lies in the shire of Argyle. The air is temperate, cold, and moift, but qualified by fresh breezes from the mountains. This island in general affords good pasturage for cattle of all forts. They have a great many deer, and abound with wild-fowl, and very fine hawks. Their horses are little, but very sprightly; their black cattle excellent meat. Their corn is barley and oats. It formerly abounded with wood, but most of it is now cut. The heaths, besides pasturage for cattle, afford good fuel for the natives. The bay of Duart, on the west-side, is a good anchoring-place. Upon this stands the castle of Duart, the seat of the head of the ancient family of Maclean, who still retain the property of one half of this island: the other moiety is the property of the duke of Argyle. There are two other castles, and several anchoring places about this island There are some fresh-water lakes in it, which afford trout, eels, &c. Several smaller isles lie about it and in its bays; fome of which are very fruitful, and fome impregnable. The bay called Lochleffan abound with herrings and shell-fish. The inhabitants of this isle profess Protestantism, and have two parish churches, besides several ruinous places, formerly usa for devotion. In the found or bay of Mull, betwin this isle and Lochaber, a great ship, called the Florida belonging to the Spanish Armada, was lost in the year 1588. Persons in several places have often dived so

her, and found good account in the guns, and other

valuable effects they have got out of her.

It feems here indispensibly necessary to mention the Ifle of Staffa, which is taken notice of by Mr. Buchanan, but in the flightest manner; and among the thousands who have navigated these seas, none have paid the least attention to its grand and striking characteristic, till visited by Mr. Banks, in the month of August, 1773, and to whom the world is indebted for a particular description of its wonders, of which the

following is an extract.

In the found of Mull, fays Mr. Banks, we came to anchor on the Morven fide, opposite to a gentleman's house called Drummen. The owner of it, Mr. Macleane, having learned who we were, very civilly invited us on shore. We accepted his invitation, and arrived at his house, where we met an English gentleman, Mr. Leach, who no fooner faw us, than he told us, that about nine leagues from us was an island, where, on the he believed, no one, even in the islands, had been, on which were pillars like those of the Giant's Causeway. of the This was a great object to me, who had wished to

At nine o'clock, after a tedious passage, having had not a breath of wind, we arrived, under the direction of Mr. Macleane's son and Mr. Leach. It was too hark to see any thing, so we carried our tent and bagage near the only house upon the island, and began betwin
bet

The

The impatience which every one felt to fee the wonders we had heard fo largely described, prevented our morning's rest. Every one was up and in motion before the break of day, and, with the first light, arrived at the fouth-west part of the island, the feat of the most remarkable pillars; where we no sooner arrived than we were ftruck with a scene of magnificence which exceeded our expectations, though formed, as we thought, upon the most fanguine expectations. The whole of that end of the island is supported by ranges of natural pillars, mostly above fifty feet high, standing in natural colonnades, according as the bays or points of land formed themselves. Upon a firm basis of solid unformed rock, above these, the stratum which reaches to the foil or furface of the ifland, varied in thickness, as the island itself formed into hills or vallies; each hill, which hung over the columns below, forming an ample pediment. Some of these were above 60 feet in thickness, from the base to the point, formed by the floping of the hill on each fide,

almost into the shape of those used in architecture.

Compared to this, what are the cathedrals or palaces to the built by men! mere models or playthings, imitations as diminutive as his works will always be when compared to those of nature. Where is now the boast of the architect! Regularity, the only part in which he sooks of pancied himself to exceed his mistress, Nature, is here this land his own and here it has been for age to had his own and here it has been for age.

undescribed.

With our minds full of fuch reflection, we proceed ed along the shore, treading upon another Giant's Caule zway, every stone being regularly formed into a certain number of fides and angles, till, in a short time, we arrived at the mouth of a cave, the most magnificent, I suppose, that has ever been described by travellers. The mind can hardly form an idea more magni-

I suppose, that has ever been described by travellers.

ranges of colums, and roofed by the bottom of those which have been broken off in order to form it: between the angles of which a yellow stalagmitic matter has issued, which serves to define the angles precisely, and, at the same time vary the colour with a great deal of elegance; and, to render it still more agreeable, the whole is lighted from without: fo that the farthest extremity is very plainly feen from without, and the air within being agitated by the flux and reflux of the tide, is perfectly dry and wholfome, free entirely from the damp vapours with which natural caverns in general abound.

We asked the name of it: "the Cave of Fiuhn," faid our guide. " What is Finhn?" faid we. " Finhn Mac Coul, (replied he) whom the translator of Offian's works has called Fingal." How fortunate, that in this cave we should meet with the remembrance of that chief, whose existence, as well as that of the whole epic poem, is almost doubted in England *.

* "The Earle language is the rule speech of a barbarous people, who had few thoughts to express, and were content, as they conceived grosspalaces b, to be grossly understood. After what has been lately talked of Highitations and barde, and Highland genius, many will flartle when they are fold, that the Earse never was a written language; that there is not in the world an Earse manuscript of an hundred years old; and that the books of the Highlanders were never expressed by letters, till some little nich he books of piety were translated, and a metrical version of the Psalms is here at manual by the Synod of Argyle. Whoever, therefore, now writes this language, spells according to his own perception of the sound, for age and his own idea of the power of the letters. The West and the Leish recultivated tongues. The West, two hundred years ago, insusted recultivated tongues. The Welfe, two hundred years ago, infulted

recellivated tongues. The Welfe, two hundred years ago, infulted her Earle merely floated in the breath of the people, and could there a Certain a tective little improvement.

The Earle has many dialects, and the words used in time islands to at always known on others. In literate nations, though the promised in the most always known on others. In literate nations, though the promised in the most intendiction, and fometimes the words of common speech may differ, now in England, compared with the south of Scotland, yet there is a retendiction, which pervades all dialects, and as understood in every time. But where the whole language is colloquial, he that has been appeared, never gets the rest, as he cannot get it but by change of little.

The little island of Staffa lies on the west coast of Mull, about three leagues north-east from Jona. Its greatest length is about an English mile, and its breadth about half a one. On the west side of the island is a fmall bay, where boats generally land; a little to the fouthward of which the first appearance of pillars are to be observed. They are small, and, instead of being placed upright, lie down on their fides, each forming a fegment of a circle. From thence you pals a fmall cave, above which, the pillars, now grown a little larger, are inclining in all directions: In one place in particular, a small mass of them very much resemble the ribs of a ship. From hence, having paffed the cave, which, if it is not low water, you must

" In an unwritten speech, nothing that is not very short is transmitted from one generation to another. Few have opportunities of hearing a long composition often enough to learn it, or have inclination to repeat it fo often as is necessary to retain it; and what is once forgotten is loft for ever. I believe there cannot be recovered, in the whole Earse language, five hundred lines, of which there is any evidence to prove them a hundred years old. Yet I hear that the father of Offian boafts of two chefts more of ancient poetry, which he fup-

presses, because they are too good for the English.

" I suppose my opinion of the poems of Offian is already discovered. I believe they never existed in any other form than that which we have The editor, or author, never could fhew the original, nor can it be fhewn by any other. To revenge reasonable incredulity, by refufing evidence, is a degree of insolence with which the world is not yet acquainted, and flubborn audacity is the last refuge of guilt It would be easy to shew it if he had it; but whence could it be had? It is too long to be remembered, and the language formerly had nothing written. He has doubtless invented names that circulate in popular flories, and may have translated some wandering ballads, if any can be found; and the names, and some of the images being recollected, make an inaccurate auditor imagine, by the help of Caledonian bigotry, that he has formerly heard the whole.'

We have here given the opinion of Dr. Johnson, (in his Journey 1 the Western Ists of Scotland, published in 1775) of the originality of the the poems of Offian, which has been attacked and defended by different pens. It is, however, but justice to observe, that Dr. Blair's treatile on these poems is perhaps the best defence hitherto made of their originality, and which, in the opinion of many, proves them, beyond

doubt, to be genuine.

Its

The main island, opposite to Boo-sha-la, and farther towards the north-east, is supported by ranges of pillars pretty neat, and though not tall, (as they are not uncovered to the base) of large diameters. At their feet is an irregular pavement, made by the upper fides of fuch as have been broken off, which extend as far under water as the eye can reach. Here the forms of the pillars are apparent: there are of these, four, five, fix, and feven fides; but the numbers of five and fix are by much the most prevalent. The largest I met was of feven, and was four feet five inches in diameter.

Proceeding further to the north-west, you meet with the highest ranges of pillars, the magnificent appearance of which is past all description. Here they are bare to their very basis, and the stratum below

them is also visible.

The sky growing black towards the afternoon, and the wind freshening into a gale, attended with rain, we quitted the island. The weather discouraged us from a chace of feals, the pleasure of which we proposed to enjoy on the rock Heiskyr, a little to the west, where

they fwarm.

The view of Jona, as we approached it, was very picturesque: the east side, or that which bounds the found, exhibited a beautiful variety. An extent of plain, a little elevated above the water, and almost covered with the ruins of the facred buildings, and with the remains of the old town, is still inhabited. Beyond these the island rises into little rocky hills, with

This island belongs to the parish of Ross in Mull and by some writers is called St. Columbus. It is three miles long, and one broad; the cast-side is mostly flat, the middle rifes into small hills; the west fide is very rude and rocky, and the whole is a fingular mixture of rock and fertility.

The foil is a compound of fand and comminuted fea-shells, mixed with black loam, and is very favourable to the growth of bear, natural clover, crowsfoot. and daifies. Oats do not succeed here; but flax and

potatoes come on very well.

The tenants here run-rig, and have the pasturage in common. It supports about 108 head of cattle, and about 500 sheep. There is no heath in this island: cattle unused to that plant give bloody milk on their remove eating it, which is the case of the cattle of Jona trans-ported to Mull, where that vegetable abounds; but Wit the cure is foon effected by giving them plenty of a bribe

The number of inhabitants is about 150, and are the most stupid and most lazy of all the islanders; yet most of them boast of their descent from the companions of St. Columba.

A sew of the more common birds frequent this island; wild geese breed here, and the young are often reared and tamed by the natives. The beautiful sea-bugloss makes the shore gay with its glaucous leaves and purple slowers. The eryngo, or sea-holly, is frequent, and the satal belladonna is found here.

The town consists of about sifty houses, mostly very mean, thatched with straw of bear, pulled up by the roots, and bound tight on the roof with ropes made of heir lim heath. Some of the houses that lie a little beyond the rest seemed to have been better constructed than the ones;

others,

We visited every place in the order they lay from the village. The first was the ruins of the nunnery, filled with cannonesses of St. Augustine, and confecrated to St. Oran. They were permitted to live in community for a confiderable time after the Reformation, and wore a white gown, and above it a rotchet of fine linen.

The church was 58 feet by 20: the roof of the eastend is intire, and is a pretty vault made of very thin stones, bound together by four ribs meeting in the center. The floor is covered some seet thick with cow-dung, this place being at present the common shelter for the cattle; and the islanders are too lazy to remove this fine manure, the collection of a century, to enrich their grounds.

With much difficulty, by virtue of fair words and a bribe, we prevailed on one of these idle fellows to remove a great quantity of this dunghil, and by that means once more expose to light the tomb of the last s; yet priores. Her figure is cut on the face of the stone, an ompa-angel on each side supports her head, and above them is

angel on each fide supports her head, and above them is a little plate and a comb. The prioress employs only not this one half of the surface, the other is filled with the form of the Virgin Mary, with a crown and mitre on beautiher head; the child in her arms, and to denote her aucous queen of heaven, a sun and moon appear above.

We next arrived at Reilig-ourain, or the buryinghale of Oran. It is a vast enclosure, a great place of a great place of the mumber of monarchs who were deby the contest here, and for the potentates of every isle, and her lineage; for all were ambitious of lying in this ond the colors; but so overgrown with weeds, especially the others.

common butter bur, that very few are at prefent to be feen.

It may not be amis here to observe, that Jona derives its name from a Hebrew word, signifying a dove, in allusion to the name of the great Saint, Columba, the founder of its same. This holy man, instigated by his zeal, lest his native country, Ireland, in the year 565, with the pious design of preaching the gospel to the Picts.

Six miles west from this issand lies Tyre-ty, eight miles long and three broad. It is reckoned to be the most plentiful of all the issands in the necessaries of human life, abounding with corn, cattle, fish, and and sowl. Here is a fresh-water lake, with an island, and an old castle in it, and an harbour for long-boats, which are used in that country. It formerly belonged to the family of Maclean, but now belongs to the duke of Argyle. There is one church in this island, called Sorabi, whereof the dean of the isles was minister. The people are protestants; they are not very healthy, as the country lies low.

Near this are two islands, called Kerniberg, fo strong by nature, that a little art would make them impreg-

nable.

About half a league to the north-east lies the island of Col, which is computed to be 13 miles in length and three in breadth. Both the ends are the property of the duke of Argyle, but the middle belongs to Maclean, who is called Col, as the only laird. The inhabitants are Protestants: they have a notion here that Tyre-ty breeds more women than men, and Col more men than women; so that they may people each other without the assistance of their neighbours.

Col is not properly rocky; it is rather one continued rock, of a surface much diversified with protuberances, and covered with a thin layer of earth, which is often broken, and discovers the stones. Such a

foil is not for plants that strike deep roots; and perhaps in the whole island (fays Dr. Johnson) nothing has ever yet grown to the height of a table. The uncultivated parts are cloathed with heath, among which industry has interspersed spots of grass and corn. Young Col, who has a very laudable defire of improving his patrimony, has introduced the culture of turnips, of which he has now (1775) a field, where the whole work was performed by his own hand. His intentions is to provide food for his cattle in the winter. This innovation was confidered, by Macfweyn, as the idle project of a young head heated with English fancies; but he has now found that the turnips will really grow, and that the hungry sheep and cows will really eat them.

By fuch acquisitions as these, the Hebrides may, in time, rise above their present distress. Wherever heath will grow, there is reason to believe something better may draw nourishment; and, by trying the production of other places, plants will be found suit-

able to every foil.

which Such a Col has many lochs, some of which have trout and eels, and others have never yet been stocked: another proof of the negligence of the islanders, who might take fish in the inland waters when they cannot go to sea.

Their quadrupeds are horses, cows, sheep, and goats; but they have neither deer, hares, nor rabbits. They have no vermin except rats, which have been lately brought thither by sea, as to other places; and

they are free from ferpents, frogs, and toads.

On our arrival in the harbour of Cannay, on looking around us, each shore appeared pleasing to humanity, being verdant, and covered with hundreds of cattle. Both sides gave a full idea of plenty, for the verdure was mixed with very little rock and scarcely any heath; but a short conversation with the natives soon dispelled this

agreeable error: they were at this time in fuch want, that numbers had neither bread nor meal for their poor babes. Fish and milk were now their whole subfiftence, but the first was a precarious relief; for, be. fides the uncertainty of fuccess, to add to their diffress, their stock of fish-hooks were almost exhausted, and to ours, that it was not in our power to supply them. The ribbands, and other trifles I had brought, would have been infults to people in diffress. I lamented that my money had been laid out in so useless a man-ner; for a few dozens of fish-hooks; or a sew pecks of meal, would have made them happy.

The crops had failed there the last year, (1773) belief but the little corn sown at present had a promising grace aspect, and the potatoes the best I had seen; but these were not fit for use. The isses, I fear, annually experience a temporary famine, perhaps from improvidence, perhaps from eagerness to increase their stock in don of cattle, which they can easily dispose of to fatisfy the demands of their landlords, or the oppressions of an agent.

agent.

The cattle are of a middle fize, black, long-legged, and have their staring manes from the neck along the back, and up part of the tail. They look well, for preven in several parts of the island, they have good warm recesses to retreat to in winter. About fixty head of cattle are annually exported. Each couple of milds cows yields, at an average, seven stones of butter and cheese: two thirds of the first, and one of the last. The cheese fold at 3 s. 6 d. a stone, and the butter at such the chief use of them in this little district, is to form an annual cavalcade at Michaelmas. Every man in the island mounts his horse, unfurnished with saddle, and takes behind him either some young girl, or his neighbour's wise, and then rides backwards and forward from the village to a certain cross, without being able in the

Matrimony is held in fuch efteem here, that an old maid or an old batchelor is fearcely known, such firm

maid or an old batchelor is scarcely known, such firm belief have they in the doctrine of the ape-leading dismissing grace in the world below; and, in order to avoid that danger, the young men marry at twenty, and the mually lastes at seventeen. The fair sex are used here with improme more tenderness than common, being employed only in domestic affairs, and never forced into the labours of the field. Here are plenty of poultry and eggs.

Great quantities of cod and ling might be here taken, there being a fine sand-bank between this issue and Barra; but the poverty of the inhabitants prevents their attempting a fishery. While I was at camble to the summer of long line, 500 hooks, and two study lines, 80 fathem long, which are placed at each end of the long lines, with buoys at top to mark the place when sunk, manner to form in the last of the summer is very considerable, and past the ability of these poor people.

This island is about three miles long, and was the property of the bishop of the isles, but, at present, is in the possession of Mr. Macdonal, of Clan-Ronald.

His father, a resident agent, has the letting of the lands, to the impoverishing and starving of the wretched inhabitants, as he exacts more than they can eafily pay. It is faid, that the factor has, in a manner, banished sheep, because there is no good market for them: fo that he does his best to deprive the inhabitants of clothing as well as food. At present they supply themselves with wool from Rum, at the rate of 8 d. the pound.

All the clothing is manufactured at home; for the women not only spin the wool, but weave the cloth. The men make their own shoes, tan the leather with the bark of willow, or the roots of the tormentil, and in defect of wax-thread use split thongs. About 20 tons of kelp are made on the shores every third year.

The islands of Rum, Muck, and Egg, form one parish. Cannay is inhabited by 220 people, all of neath, whom, except four families, are Roman Catholics; but in the whole parish there is neither church, manse, nor school. There is indeed in this island a catechist, meath to who has 9 l. a year from the royal bounty. The mi. liteness nister and the popsish priest reside in Egg; but, by ing: so reason of the turbulent seas that divide these isles, are the cur very seldom able to attend their flocks. I admire the moderation of their congregations, who attend the by any preaching of either indifferently as they happen to are rive. As the Scotch are economists in religion, I would recommend to them the practice of one of the little Swiss mixed cantons, who, through mere frugality, kept but one divine, a moderate, honest fellow, who, steering clear of controversial points, held forth to the Calvinist flock on one part of the day, and to his Catholic on the other. He lived long among them much respected, and died lamented. much respected, and died lamented.

After having left Cannay, and passed with a favourable gale through a rolling sea, we anchored in the life of Rum, in an open bay, about two miles deep, line litt

ar.

We entered that house which had the best aspect, but found it little superior in goodness to those of Ilay. This indeed had a chimney and windows, which diftinguished it from the others, and denoted the supenority of the owner. The rest knew neither windows nor chimnies; for a little hole on one fide gave an exit to the smoke. The fire is made on the floor beneath, and above hangs a rope, with a pot-hook at the end, to hold the veffel that contains their hard manse, fare, a little fish, milk, or potatoes. However, beechist, neath the roof I entered, I found an address and politeness from the owner and his wife that were astonishout, by
ing: such pretty apologies for the badness of the treat,
the curds and milk that were offered, which were tenire the dered to us with as much readiness and good-will, as
hy any of Homer's dames calchysted by him in his nd the by any of *Homer*'s dames, celebrated by him in his a to are Odyssey for their hospitality!

Rum is the property of Mr. Macleane of Cal, a land-

of the ord mentioned by the natives with much affection. It is about 12 miles long, and 6 broad. The island fellow, is one great mountain, divided into several points, the d forth highest of which is called Aisgobhall. About this bay, and to on the east-side, the land slopes towards the water; go them but on the south-west it forms precipices of a stupendous height. The surface of the island is in a manfavour. her covered with heath, and in a state of nature. in the There is very little arable land, excepting about the sine little hamlets that the natives have grouped in

different places, near which the corn is fown in diminutive patches, for the tenants here run-rig as in Cannay. The greatest farmer holds 51. 12s. a year, and pays his rent in money. The whole rent of the island is about 110%.

The little corn and potatoes they raife is very good! but so small is the quantity of bear and oats, that there is not a fourth part produced necessary to supply their annual wants; all the subfiftence the poor people have befides is curds, milk, and fish. They are a wellmade race, but carry famine in their aspect; and are often a whole fummer without a grain in the island, which they regret not on their own account, but for the fake of their poor babes. In the prefent manage ment of the island, there is no prospect of any in-

A number of black cattle is fold, at 30 or 40s. per head, to graziers who come annually from Skie, and other places. The mutton here is finall, but the mol delicate in our dominions, if the goodness of our ap petites did not pervert our judgments. The purchal of a fat theep was 4s. 6d. of thefe the natives kill few, and also of cows, to falt for winter provisions ate far No hay is made in this island, nor any fort of proven the far der for winter provision; so that the domestic animal and is fupport themselves, as well as they can, on spots of grass preserved for that purpose. A very few poultr are reared here, on account of the fearcity of grain.

No wild quadrupeds are found on this island, es cepting stags. These animals once abounded here recely but they are now reduced to eighty by the eagle who not only kill the fawns, but the old deer all feizing them between the horns, and terrifying then till they fall down fome precipice, and become the vaft A

Here are only the ruins of a church in this island fo that the minister is obliged to preach, the few time

Egg lies not far from Coll, is three miles in length, and are and a half in breadth, and the whole island, but for tetty good for pasturage and cultivation. On the but for the high rock, of about 150 paces in circumference, any in
ith a fresh-water pool in the middle of it: there is cs. po ally one pass up to it; fo that it is a natural fort. On the fourth-west side of the isse a cave, capable of the most attaining some hundreds of people; and there are veral medicinal wells in this issue.

veral medicinal wells in this island.

the modern medicinal wells in this island.

The island of Skie is the largest of the Hebrides, being over fixty measured miles long, but of an unequal eadth, by reason of the numbers of lochs that peneter far on both sides. The modern name of this and is of Norwegian origin, derived from skie, a misst defrom the clouds, which almost constantly hang the tops of its hills, was stiled Ealand Skinnach, or eCloudy Island. No epithet could better suit the ace; for, except in the summer feason, there is need her the same are generally wet, and seldom warm. The steer also her, and arriving charged with the vapours from evast Allantic, never fails to dash the clouds it wasts the losty summits of the hills of Cuchullin, and their his island hents deluge the island in a manner unknown in few time ter places. What is properly called the rainy seaion.

fon, commences in August. The rains begin with moderate winds, which grow stronger and stronger till the autumnal equinox, when they rage with incre-

dible fury.

The husbandman then fighs over the ruins of his vernal labours, fees his crop feel the injuries of climate, some laid prostrate, and the more ripe corn shed by the violence of the elements. The poor foresee famine and consequential disease, and agonize over those distresses which inability deprive them of the power of preventing. The nearer calls of family and children naturally first excite their attention: to main. tain and educate are all their hopes; for that of accumulating wealth is beyond their expectation. the poor are left to the care of Providence: they prowl like other animals along the shore to pick up limpets and other shell-fish, the casual repasts of hundreds, during part of the year, in these unhappy islands. Hundreds thus annually drag through the feafon a wretched life; and numbers unknown, in all parts of the western islands, fall beneath the pressure, some of hunger, more of the putrid fever, the epidemic of the coafts, originating from unwholesome food, the dire effects of necessity. Moral and innocent victims! who exult in the change, first finding that place, "where the wicked cease from troubling, and the weary are at reft."

The farmer labours to remedy his diffress to the best of his power, but the wetness of the land, late in the fpring, prevents him from putting into the ground the early feed of future crops, bear and fmall oats, of which the last are fittest for the climate, fince they bear the fury of the winds better than other grain, and require less manure, of which there is a deficiency in this island. Poverty prevents him from making experiments in rural occonomy: the ill fuccess of a few made by the more opulent, determines him to follow

WESTERN ISLES. 289

the old track, as attended with more certainty, unwilling, like the dog in the fable, to grasp at the shadow, and lose the substance, even poor as it is.

The produce of the crops very rarely are in any degree proportioned to the wants of the inhabitants. Golden feafons have happened, when they have had fuperfluity; but the years of famine are as ten to one.

The helps of the common years are potatoes.

The poorer tenants, who have no winter parks, are under the necessity of keeping the cattle under the same roof with themselves during the nights, and are often obliged to keep them alive with the meal designed for their families. The cows are often forced, through want of other food, to have recourse to the shores, and feed on the sea-plants at low water. These creatures, merely by instinct, at ebb of tide, hasten from the moors, down to the sea-shore, though they are not within sight of it.

Cattle is at present the only trade of the island, of which about four thousand are annually sold, from 21 to 31. a head. About 250 horses are also purchased from hence every year. Here are no sheep but what are kept for home consumption, or for the wool for the cloathing of the inhabitants. Hogs are not yet introduced here, they having no proper seed for them. They make about 300 tors of kelp annually; but it is thought not to answer, as it robs the land of

lo much manure.

At Struan, in this island, is a beautiful Danish fort in the top of a rock, formed with excellent masonry, the figure of which, as usual, is circular. The diameter, from outside to outside, is sixty seet, and that of the inside 42. Within are the vestiges of sive apartments, one in the center, and sour round that. The walls are 18 feet high, and the entrance six, covered with great stones.

Vol. IV. O About

About a furlong north-west of this, is another large rock, precipitous on all fides but one. On that is the ruin of a very thick wall, and the traces of a dyke quite round, even on the inaccessible parts; between which and the wall is a large area. This feems to have been built without regularity, yet probably belonged to the fame nation. Each feems defigned to cover an affemb. lage of people, who lived beneath their protection in an hostile country; for under both are remains of numbers of fmall buildings with regular entrances. The last inclosure is supposed to have been defigned for the fecurity of the cattle, of which thefe freebooters had robbed the natives.

0:

Dun-vegan is the feat of Mr. Maclerd, a gentleman descended from one of the Norwegian viceroys, governors of the ifles while they bore a foreign yoke; but the antiquity of his descent is an accident that would convey little honour to him, had he not a much more fubstantial claim: for to all the mildness of human nature, usually concomitant with his early age, is added the sense and firmness of a more advanced life feels for the diffresses of his people, and, insensible of his own, with uncommon difinterestedness, has relieved his tenants from their oppressive rents: he has received, instead of golden trash, the treasures of warm affections and unfeigned prayers. He will foon experience the good effects of his generofity: gratitude, the refult of that fenfibility, still existing among those accustomed to a seudal government, will shew itself in more than empty words; and, in time, the will not fail to exert every nerve to give his virtue the reward it merits.

The castle of Dun-vegan is situated on a high rock over a loch of the same name, a branch of loch Falast. Part is modernized, but the greater portion i ancient. The oldest is a square tower, which, with a wall round the edge of the rock, was the origina ftrength

WESTERN ISLES.

frength of the place. Adjacent is a village and the post-office, for, from hence, a packet-boat, supported by subscription, fails every fortnight for the Long Island.

Sota-Britil lies a quarter of a mile fouth of Skie, is five miles in circumference, full of bogs, and fitter for pallurage than cultivation. On the west-side it is covered with wood. The coasts of this island abound with cod and ling.

On the north-fide of Skie lies Scalpa, five miles in circumference. It has wood in feveral parts of it, and

is fruitful in corn and grafs.

Arength

A little farther north lies Raarfay, nine miles long, and three broad. It has much wood, and is fitter for patture than cultivation. On the east side of it is a soverignore, which runs down from a rock, and petrifies into a fine white lime, of which it yields great quantiwould ties. Here is also a quarry of good stone. On the westmore side is abundance of caves, where people lodge, who go the interior in summer upon the account of fishing or grazadded ing of cattle. There are several forts in this island,
He seem of which are naturally very strong. The prosible of pietor is a cadet of the family of Maclead, and is much respected by the inhabitants.

A quarter of a mile farther north, lies Rona, three miles in length. It is fruitful in pasturage; and the miles in length. It is fruitful in pasturage; and the miles in circumference, fruitful in corn and grass, and noted for the vast shoals of herrings about it, which seem in the second strong the second strong that it is should be seen to so the sould for large whales, which pursue the sould of it. The sea-fowl, called coulternebs, are set on the strong of the second strong of the second strong of the second strong of the second of the sec influre than cultivation. On the east fide of it is a

this island, particularly one, called The Round Table. about half a mile in circumference, with a fresh-water fpring, which makes an impregnable fort, there being only one way to climb up to it, by one man at a time. The natives of Skie, and the neighbouring islands, have a peculiar way of curing the diffempers which are incident to them, by simples of their own product, wherein they are fuccessful to a miracle: they have alto feveral medicinal wells.

Sixty miles fouth west from Skie lie nine islands, the chief of which is Vaterfa, which, besides many other conveniencies, has a large harbour, capable of receiving the largest ships, where, at stated times, great numbers of fithermen meet from the neighbour-

ing countries.

Two miles from Vatersa lies Barra, seven miles long, and three broad, called fo from St. Bar, the tutelar faint. It is fruitful in corn, and noted for its cod-fishing. The sea enters this island at a small channel, and afterwards enlarges itself into a round bay, in which is an illand, with a very strong castle. It has perfect a good harbour on the north-east fide, where is plenty of fish; and the rivulets on the east-fide abound with falmon.

About a quarter of a mile fouth from Barra lies Kifmul, the feat of Mac Neil of Barra, which is encompassed with a stone wall two stories high; within which there is a tower, a hall, a magazine, and other houses. They have a church in this island, and a deep at chapel, where the Mac Neis are buried. I he natives are papists, and generally very ignorant and sudands perititions

Here are several other less islands belonging to Ma the east Neil; some of them truitful enough in corn and grass sometim others lest for passurage, and some of them remarkable ble: it for fishing of ling and cod. The inhabitants are very fish and healthy and hospitable: they have abundance of sea

A little north of Barra lies South-uif, 21 miles long, and in fome places three, and in others four miles broad. The east-side is mountainous, but the west plain and arable. The island abounds with freshwater lakes, which have plenty of fowl and fish, particularly trouts and cels. In feveral of them are islands with forts. There is one lake three miles long, into which the fea has made its way, though the people did all they could to hinder it. The inhabitants are healthy: one man lately lived 130 years, and retained his understanding. The Irish tongue is here spoken in great persection. The Macdonalds, descended from the ancient kings of these islands, are proprietors, and with the inhabitants, profess the populh religion. The foil is generally fandy, but yields a good produce of barley, oats, and rye.

Betwixt this island and North-uift, two miles north, lies Benbecula. The ground is all plain and landy betwixt them, except two little channels, about kneeand a deep at a tide of ebb; but the whole is navigable by the national boats at a tide of flood; and there lie feveral finall and funds on the east of these channels. Benbecula is three miles long, and three broad. It has a bay on to Mae the east side for small vessels, where herrings are d grass sometimes taken. The east part of this island is ara-arkable ble: it has several fresh-water lakes well stored with the very sish and sowl, and some small forts upon the islands in

those lakes. The natives are papists, and the pro.

prietor is one of the Macdonalds.

A little north of this island lies North-uift, belong. ing to Sir Alexander Macdonald, nine miles long, and about 30 in circumference. It is fitter for pasturage than cultivation on the east part, where it is mountainous; but the welt-fide is plain and arable, and where it is not ploughed, is covered with clover, daify, and variety of other plants, very pleafant to the fight, and of a fragrant smell; and affords good pastur-The grain here is barley, oats, and rye, which yields from ten to thirty-fold; and there is no doubt, but wheat would grow here very well. This island has feveral bays on the east-fide, where ships may ride; the chief of which are Loch-eport, Loch-rona, and Loch maddes; the latter is capable of containing hundreds of veffels of the largest fize: 400 veffels have been laden with herrings there in a feason. Cod, ling, and all forts of fish that frequent the western seas, are to be found here. There is a small island in this bay, upon which a magazine was erected for carrying on a fishery in the reign of king Charles I. There is fuch a number of fresh-water lakes in this island, as can hardly be believed; they are generally well stored with trouts and eels, and, which is more frange, with cod, ling, and other fea-fish, brought into them by the spring-tides. These lakes have many small islands, which abound with variety of land and seafowl; and fome of them have islands, with forts: it has also several rivers, which afford falmon, and some of them speckled, with large scales. The inhabitants are Protestants.

There are feveral other less islands, which lie on both sides of North-uist, the most remarkable of which is Eousmil, on the west, a rock about a quarter of a mile in circumference, noted for its seal-fishing about

about

the

Half a league fouth from this lies Lingay, which furnishes the neighbouring islands with peat for fuel. It has abundance of black cattle, that make excellent meat; the natives falt it in the hides, which, they say, preserves it, and makes it taste better, than when salted in casks. This island abounds also with deer, sea and land-sowl of all forts; among the rest, with hawks, eagles, and swans. The inhabitants of South and North-wist are generally well proportioned and healthy, and many of them live to a great age: they

are very hospitable and kind to strangers.

he isle of Lewes derives its name from the Irish word Leog, fignifying a lake, with which this island abounds: it is by the islanders commonly called The Long Island. It is near 100 miles from north to fouth, and from 13 to 14 in breadth. It is reckoned part of the shire of Ross; but the isle of Lewes, properly so called, is but 36 miles in length, and 10 or 12 broad; and belonged to the late earl of Sesforti. It reaches from the north of Bowling-head to the fouth of Haffiness. The southern part is named Harries. The air is temperately cold and moift, and the natives commonly use a dose of usquebaugh for a corrective. The island is healthy, especially in the middle, from fouth and north: it is arable on the west-side for about 16 miles on the coast; and is likewise plain and arable in several places in the east. It is fruitful in corn, and yields a good increase; their common grain is barley,

4 oats

cats, and rye; and they have also flax and hemp There are feveral convenient bays and harbours here particularly Lock-flornvay on the east-fide, in the middle of the island, on the side of which stands a neat regular town, called Stornervay, where are to be feen the ruins of a caltle, faid to be built by Oliver Cramwell; the Birkin Mand, feven miles fouthward; Lockolmkil, three miles farther fouth; Lochfefort and Lochcarlvay, 24 miles fouth west. This bay is remarkable for great numbers of cod, ling, and whales, which frequent it; and all the bays and coasts abound with cod, ling, herring, and all other forts of fish taken in the western seas, besides plenty of shell-fish of all forts, in such vast numbers, that the inhabitants are not able to consume them. There are feveral extraordinary springs and fountains in this island, and abundance of caves on the coasts, which otters, feals, and fowl, fre-That obelifk (if I may call it quent in great numbers. To) in the parish of Barwas, in the island of Lewes, called The Thrushel-stone, is very remarkable; being not only above 20 feet high, but likewife almost as much in breadth, which no other comes near. Dur, or fortification, built on an eminence in St. K Ida, which is an old fort, is about 18 leagues distant from North-uift, and 20 from the middle of Lewes or Harries, to be feen only in a very clear day, like a bluish mist; but a large fire there would be as visible at night, as the afcending smoke by day. In this small isle (where are many such Duns), north of the village of Brago, is a round fort, composed of huge stones, three stories high: that is, it has three hollow passages, one over another, within a prodigious thick wall quite round the fort, with many windows and stairs.

Here also, at the village of Classernis, is a Druidial temple extremely remarkable. The circle consists of 12 obelisks, about seven seet high each, and distant from each other six seet. In the center stands a slone

time (by w fame vet th confif of the denot cipal which repref been c nately the fe inthe Thi and ho and p **fmalle**i for all to feed bitants and ftr very qu mulic: archery Ina acouple of the

1 3 feet

13 feet high, in the perfect shape of the rudder of a hip. Directly fouth from the circle stand four obeliks running out in a line, another fuch line due eaft, and a third to the west: the number and distances of thefe stones being in these wings the same: so that this temple, the most entire that can be, is at the same time both round and winged. But to the north reach (by way of avenue) two strait ranges of obelisks, of the fame bigness and distances with those of the circle; yet the ranges themselves are eight feet distant each, confifting of 19 stones, the 30th being in the entrance of the avenue. This temple stands astronomically, denoting the 12 figns of the zodiac, and the four principal winds, fubdivided each into four others: by which, and the 19 stones on each fide of the avenue, representing the cycle of 19 years, it appears to have been dedicated principally to the fun, but subordinately to the feafons, and the elements, particularly to the fea, and the winds, as is manifest by the rudder in the middle.

This island abounds with cows, horses, sheep, goats, and hogs; the black cattle are small, but very prolific, and prove excellent meat: the shorses are likewise smaller than those on the continent, but as serviceable for all domestic uses, and live very hard, having little to seed upon in the spring but sea-ware. I he inhabitants are well-proportioned, and in general healthy and strong, and of a sanguine complexion; they are very quick of apprehension, and lovers of poesy and music: they are dextrous in swimming, vaulting, and

archery, and make stout able seamen.

In a little island near the greater one of Lewes, was acouple of eagles, which would never suffer any other of the kind to continue in the place: driving away their own young ones, as soon as they were able to say. I he natives said, that those eagles were so careful of their habitation, that they never killed any sheep

0 5

or lamb in the island, though the bones of lambs, fawns, and wild-fowl, were frequently found in and about their nelts: fo that they made their prey in the opposite islands, the nearest of which is a league distant.

There are many other less islands, which lie round this; the chief of which are, Grave, in the mouth of Lochcarlvay, an high rock, half a mile in compais, affording good pasturage, and naturally a strong fort: the two Berneras, one two miles, and the other four miles long, and four miles broad; both fruitful in corn and grafs.

Near Carlowy-bay lie four small islands, which belong to the inhabitants of Lewes, who go thither every fummer, and bring from thence great flore of fowls, eggs, down, feathers, and quills: one of them is called the Island of Pygmies, because many little bones, refembling those of men, are digged out of the ground

there.

Twenty leagues from the point of Ness, in Lewes, lies Rona, a mile long, and half a mile broad. It has an hill on the west part, which makes it visible from Lewes in the fummer time. It was inhabited by about five families, who had the island, and the fishery about it, divided among them, and were very exact and nice in their properties; and, when their number increased, the fupernumeraries were sent to their landlord in Lewes, who once a year fends the minister of his parish, and a fertant, to visit them, and bring his rents, which are paid in barley-meal, fewed up in skins, sea-fowl, and some fish, &c. They have a chapel dedicated to St. Ronan, in which they repeat the Lord's prayer, creed, and ten commandments, every Lord's-day. Buchanan fays, that the inhabitants were, in his opinion, the only people in the world who never wanted any thing, and were fatisfied with their condition, having plenty of all that they defired;

Lewes.

being

heing equally ignorant of luxury and avarice, and posfelling, through their freedom from vices, that innocence and tranquillity of mind, to which others can fearcely attain by great labour, and with the help of the best instructions. Mr. Martin assires, in his Description of the Western Islands, that the ancient race of poor people was all destroyed about 40 years before in the following manner: first, a swarm of rats, none knows how, came into the island, and eat up all their corn: in the next place, some seamen landed, and robbed them of what provisions they had lest. By this means they all died before the usual time of the arrival of the boat from Lewes; upon which another colony was sent thither.

Four leagues east from Rona lies Soulisker, a rock, a quarter of a mile in circumference, which abounds with vast numbers of sea fowl, particularly Solan geefe. On this rock there builds one fowl, not found elfewhere, called colk; it is less than a goose, and all covered with down, but of different colours, which it catts when it hatches; it has a tuft on its head refembling that of a peacock, and a train longer than that of an house-cock. There were formerly 24 churches in Lewes and Harries, and the islands belonging to them; but, to our shame may it be faid, as papists were profecuted or discouraged, profaneness gained ground of superstition, and one fort of ignorance succeeded another; for, few or no ministers being fent with suitable provision and encouragement, places of religious worship became ruinous, and the service of God, and the edification of the people, very much neglected; to that feveral parishes in the High ands and isles, at prefent, are 20, 30, or near 40 miles long, and very often without any minister at all.

That part which is called Harries, produces the fame forts of corn, but with a greater increase than Lewes. The west-side is for the most part arable on

world: with ired; being

the coast. It has a noble harbour called Scalpa, a mile and an half long, and a mile broad, and there are two other harbours within three leagues of it, which abound with oysters and other shell fish. They have excellent springs here, some of which are medicinal; one particularly near Marvag is good for reftoring a lost appetite; and one near Borve, good against the colic and gravel. There are feveral caves on the mountains, and on each fide of the coaft, and in the middle of an high rock, capable of holding 50 men; which has two wells, and but a narrow pass to it by climbing up the rock; fo that in time of war it is an impregnable fort. There are likewise several ancient forts in this island. The hills and mountains abound with deer, which none are allowed to hunt without leave from Macleod the proprietor. Metricks, a fourfooted creature, about the fize of a large cat, are pretty numerous here; their fkins are very fine, of a brown colour, and make good fur; and, it is faid, the dung of this animal yields a fcent like musk. There are abundance of otters and feals here, great plenty of land and fea-fowl, and among others, eagles, and very good hawks. The inhabitants both of Lewes and Harries are Protestants.

There are other islands of small extent belonging to the Harries, the chief of which are-Bernera, two achape leagues to the fouth: it is five miles in circumference, hear th very fruitful in barley and rye, and yields fometimes ments, from 20 to 30 fold. There are two chapels in this any stra

There are feveral other islands in the neighbourhood, of two or three miles in circumference each, all tolerably fruitful in corn and pasturage; particularly Hermatra, where a magazine for the fishery was

erected in the reign of king Charles I.

Eighteen leagues west from Northuist, and 20 from Harries, lies the island called St. Kilda, or Hirta. As this Hirta is the most north-west, so Dow Hirta is the most fouth-west of all the Scots islands. The first, properly called St. Kilda, is two miles long, and one broad, faced round with a steep rock, except at the bay on the fouth-east, where vessels enter. land rifes high in the middle, and there are feveral fountains of good water on each fide the island. Their grain is oats and barley, the latter accounted the largest in the Western Isles. The inhabitants are about 200 in number, very well proportioned and ty of comely: they are Protestants, and very zealous, acand cording to their knowledge, which is but fmall, for Lewes want of instruction. They are very regular and just in their conversation, and strangers to luxury and exing to cels, being ignorant of the use of money. They have a chapel, where they assemble on the Lord's-day, to rence, hear the Lord's-prayer, creed, and ten-commanderimes ments, and neither work themselves, nor will allow in this any stranger to work, on that day. It belongs to the laird of Maclead, the chief of that ancient clan, who laird of Maclead, the chief of that ancient clan, who d lies commonly makes some cadet of his family steward of the still in this island, to receive his rents, which are paid in sister, soul, feathers, wool, butter, cheese, cattle, and nile in corn: and the steward's deputy is, in his absence, the for the chief man of the island; and generally, except the there when a minister is sent thither from Harries, baptizes and marries. They have an altar and crucifix in their ransay

chapel, which have continued there fince the time of popery; and, though they pay no worthip to the cru. cifix, yet they fwear decifive oaths, by laying their hands upon it, and take the marriage oath in the fame manner. Not long ago an illiterate fellow, one of the natives, imposed upon their ignorance, by pretending that St. John the Baptift, and the Virgin Mary, had appeared to him, and taught him fermons, prayers, and hymne; the latter, he alleged, were effectual to fecure women against miscarriage; and his price for teaching them was a sheep. He told them of a little hill, where St. John and the Virgin appeared to him; and made them believe, that, if any of their black cattle, or sheep, came near to taste the grass of that hill, they must immediately be killed and eaten; and it was necessary, that he himself should always partake of the treat. He was discovered at last by his lewd attempts upon feveral women; and being, by Macleed's order, transported from hence to Harries, he made public confession of his imposture in several churches, and feemed to be very penitent; but was not allowed to return any more. Their houses are low, built of stone, and a cement of dry earth, and covered with turf thatched over with straw. They make their beds in the walls of their houses, and lie commonly on straw, though they have great plenty of feathers and down. They live altogether in a little village, on the east-fide of the island, in good harmony; are very exact and nice in their feveral properties, and allow no encroachment upon one another; nor will they admit of it from their landlord, or his steward; but pay exactly what they agree for. The island is naturally ftrong, and, with a little art, might be made impregnable. There is an old fort at the fouth-end of the

The other is called Borera, lies about two miles north of St. Kilda, is about a mile in circumference. and most of it surrounded with an high rock. All three afford good pafturage, and abound with prodigious numbers of sea-fowl from March till September. They eat the Solan geefe-eggs raw, and fay they are good pectorals. They have another bird here, called fulmar, about the fize of a moor-hen; it picks its food out of live whales, and other fishes. When any one approaches them, they fpout out pure oil from their bills, which the natives have a way to catch, when they surprise the fowl; and make use of it for their lamps, and likewife as a remedy against rheumatic pains, aches, and other diffempers. Both fexes have a genius for poefy, are very hospitable to strangers, and charitable to their own poor; for whole maintenance they all contribute in proportion. They have but one boat belonging to the island, in which every man has a share proportionable to the rent he pays. The men are generally strong, stout rowers, and will tug a long time at the oar without intermifion. They use no compass, but take their measure from the fun, moon, or stars, and chiefly from the buries of the flocks of the fea-fowl, because they now very well to what rocks or islands they refort. They are excellent at climbing of rocks, being acultomed to it from their infancy, in order to catch

the fowl which build on them. They have two ropes, which belong to them in common, for climbing the rocks; they are 24 fathom in length each, and covered with cows hides falted, to prevent their being cut by the rocks. The men climb by turns, and bring home some thousands of eggs and fowls at a time, They also make gins of herse-hair, for catching the fowl: yet fometimes they lofe their lives by climbing. The richest man in the island has not above 8 cows, 80 theep, and two or three horses. They have no money, but barter with one another for what they want

I shall conclude this description of the Western Islands with an extract from Mr. Toland's Specimen of the Hiftory of the Druids; where he treats in general of the properties of all these isles, whither, it feems, he had intended to have travelled, in order to perfect his hiftory, and refeue many valuable pieces

of antiquity from oblivion.

" It is certain, fays that gentleman, no country abounds more with the necessaries of life, and at less labour or charge, than the Hebrides. In the fift place, there is known to be, in those islands, a prodigious plenty of flesh and fish. Their cattle of all forts (as cows, fleep, goats, and hogs) are exceeding numerous and prolific; small indeed of fize (as are improved likewise their horses) but of a sweet and delicious especia tafle; so are their deer, which freely range in heids on the mountains. No place can compare with this for tame and wild fowl, there being of the latter no where in the world a greater diversity, many forts of them extremely beautiful, and rare, or utterly unknown elsewhere. The like may be faid of their various amphibious animals. Numberless are their fountains and springs, rivulets, rivers, and lakes, very wholsome in their waters, and every where such and the perabounding with fish, especially the most delicate,

as trout and falmon: nor is it by herrings alone, that all Europe knows no feas to be better flored, nor with more kinds, from the fhrimp to the whale; as no harbours or bays are superior, whether regard be had to number or commodiousness. Add to this their variety of excellent roots and plants, particularly those of marine growth, every one of them ferving for food or physic. There pastures are so kindly, that they might live on milk alone, with that inconceivable quantity of eggs they yearly gather off the defart rocks and iflets.

" Lewes is very fruitful; and, though barley, oats, and rye, be the only grain fown there at prefent, yet the ground, both in that, and most of the other islands, is fit to bear wheat, and confequently legumes of all forts. It is truly amazing they have any crop at all, confidering how unfkilful they are in agriculture, how destitute of the proper instruments to till the ground, and that they scarce use any other manure but seawreck or tangles. From the ignorance of the inhabitants in these respects, as also in planting, inclosing, e first and draining, many fruitful fpots lie uncultivated: a pro- but they are abundantly supplied with choice eatables,

and the most nourishing shell-fish. " It is evident that these islands are capable of great improvement, as they abound in many curiofities, elicious especially in subjects of philosophical observation. Nor is it less plain, by the many ancient monuments ith this remaining among them, and the marks of the plough reaching to the very tops of the mountains (which the forts of artless inhabitants think incapable of culture), that in remote ages they were in a far more flourishing condition than at present. The ruins of spacious houses, and the numerous obelisks, old forts, temples, altars, the there such that the country was formerly full of woods, as appears by the great delicate, and fir-trees daily dug out of the ground, and by especially in subjects of philosophical observation.

many other tokens, there being feveral woods and coppices still remaining in Skie, Mull, and other places. The inhabitants are not to be mended in the proportion of their persons; no preposterous bandages difforting them in the cradle, nor hindering nature from duly forming their limbs; which is the reason, that bodily imperfections of any fort are very rate among them. Neither does any over-officiously preventive physic, in their infancy, spoil their original constitution; whence they have so strong a habit of body, that one of them requires treble the dose as will purge any man in the fouth of Scotland. But what contributes, above all things, to their health and longevity, is conflant temperance and exercise. Their food is commonly fresh, and their meals two a day, water being the ordinary drink of the vulgar. They cure all disorders of the body by simples of their own growth, and by proper diet or labour: hence they are stout and active, dextrous in all their exercises; as they are withal remarkably fagacious, choleric, but eafily appealed, fociable, good-natured, ever chearful, and having a strong inclination to music. are hospitable beyond expression, entertaining all ftrangers, of what condition foever, gratis; the use of money being still, in some of those islands, unknown, and, till a few ages past, in all of them. They have no lawyers, or attornies: the men and women plead their own causes; and a very speedy decision is made by the proprietor, who is perpetual prefident in their courts, or by his bailiff, as his substitue.

"The present (says Mr. Toland) is the 35th lord of Barra by uninterrupted lineal descent, a thing whereof no prince in the world can boast; and he is regarded as no mean potentate by his subjects, who know none greater than he. When the wife of any of them dies he has immediate recourse to his lord, representing sirst his own loss in the want of a semale

companion; and next, that of Mac Neil, his lord himself, if he should not go on to beget followers for him. Hereupon Mac Neil finds out a suitable match, (neither fide ever difliking his choice, but accepting it as the highest favour); and the marriage is celebrated without any courtship, portion, or dowry: but they never fail to make merry, on fuch occasions, with a bottle or more of usquebaugh. On the other hand, when any woman becomes a widow, the is, upon the like application, foon provided with an husband, and with as little ceremony. Mac Neil also supplies any of his tenants with as many milk-cows, as he may chance to lofe by the feverity of the weather, or by other misfortunes. He takes likewise into his own family, and maintains to the day of their death, as many old men, as through age and infirmity, become unfit for labour, an house being built hard by on purpole for them."

Of the Northern Isles of Scotland.

WE come now to the ifles of Orkney and Shetland. The Orkneys, called by the Latins Orcades, have the Caledonian ocean on the west, the German ocean on the east, the sea that divides them from Shetland on the north, and Pentland Firth, 24 miles long, and 12 broad, which divides them from the main land of Scotland, on the fouth. Ancient authors differ about their number: Pliny reckoned them 40, Orofius 33; but it appears by late discoveries, that they are only They lie in longitude 22 deg. 11 min. latitude 59 deg. 2 min. The longest day is 18 hours and some odd minutes: the winters, as in most small islands, and indeed always near the fea, are generally more subject to rain than snow. The frost and snow do not continue long, but the wind is very boisterous;

ORKNEY ISLES.

and it rains fometimes not by drops, but by violent

spouts of water.

Stroma lies fo near the coast of Caithness, that it was always poffeffed by the earls of that county, and therefore not reckoned among the Orcades. This is a fmall island, but not unfruitful. Authors are not agreed as to the reason of giving the name of Pentland Firth to that strait, in breadth about 12 miles, which lies between the Orcodes and the main land: fome fay, it is a corruption of the word Pietland Firth, which was fo called, because the Picts formerly in. habited those islands, and part of the neighbouring continent; and that many of them perished here, when repulsed by the ancient inhabitants of Ockney.

Others think Pentland Firth the proper name; and that it was so nominated from the Highlands or hills in the North of Scotland, by which it is bounded on one fide, for the same reason that the high hills, which take their rife some miles south west of Edinburgh, are called Pentland Hils. This firth is remarkable for its swift, violent, and contrary tides, occasioned by the multitude of the ifles, and the narrowness of the paffage, which makes it very dangerous, especially to strangers; and, which is remarkable, the whirlpools, with which the firth abounds, occasioned, as is thought, by some hiatuses in the earth below, are most dangerous in a calm, and whirl the boats or thips ticularly dangerous in a calm, and whirl the boats or thips round, till they fwallow them up; but if there be any wind, and the boat under fail, they are paffed without danger. The mariners, who carry paffengers between the main land and the ifles, if at any time they are driven near those whirlpools by the tide, throw a barrel, or, bundle of straw, or any other bulky thing that comes to hand, into the whirlpools, which make them smooth enough till the vessel pass over them; and what is thus cast in, is generally found floating again a mile or two distant. The different ferent

The first of the Orkney islands is South Ronalfa. between feven and eight miles in length; and in some places five, in others scarce two miles broad. it is fruitful in corn, and well inhabited; it has a fafe harbour on the north fide, but the fouth-east has the dangerous rocks called Pentland Skerries; it abounds with cattle, and has two united parish churches, whereof the dean was minifter.

A little to the fouth-west lies Swinna, a small illand, about four miles in length from west to east: and in some parts two, in others only one mile in breadth. It is fruitful in corn, capable of maintaining a few hufbandmen, and their families; has a good fishery on its coasts, and is noted for a good slatequarry. The whirl pools near this island are called

the Wells of Swinna.

Beyond Swinna lie Wayes and Hoy, which are but one ifle, 12 miles long, and full of high mountains: that part called Wayes is fruitful, and very well inhabited. This island has several good harbours, particularly that called North-Hope, one of the best in the world, and properest for those who design a fishing-trade. That part called Hoy, from which it is onaffen- ly separated by a spring-tide, has the highest mountains in Orkney, and the deepest vallies; which strike tide, a terror into strangers, who have occasion to travel other that way. On these mountains there are many sheep, pools, which run wild, and are scarcely to be caught by any art. On Rora head, an high and rugged promontory in this island, an extraordinary sowl, which the inhabitants call lyer, builds its nest; it is about the size of a duck.

a duck, and fo fat, that it feems to be nothing elfe; the inhabitants admire it much, and venture their lives to climb for it by ropes, &c. It is reckoned delicious food, eaten with vinegar and pepper. On a barren heath in this island lies an oblong stone, in a valley between two moderate hills, called, by way of contraries, the Dwarfy Stone. It is 36 feet long, 18 feet broad, and o feet high: no other stones are near it: it is all hollowed within, having a door on the east-side, two feet square, with a stone of the same dimention, lying about two feet from it; which was intended, no doubt, to close this entrance. Within is cut out, at the fouth-end of it, the form of a bed and pillow, capable of holding two perfons, as, at the north-end, is another bed, both very neatly done. Above, at an equal distance from both, is a large round hole; which is supposed not only to have been defigned for letting in light and air, when the door was thut, but likewife for letting out Imoke from the fire, for which there is a place made in the middle between the two beds. The mark of the workman's tool appear every where; and the tradition of the vulgar is, that a giant and his wife had this stone for their habitation; though the door alone destroys this fancy which is wholly groundless every way besides. Just by it is a clear and pleasant spring, for the use of the inhabitant.

From the top of these hills the sun is to be seen, all night about the fummer folflice. On the north part of this island are a church, a gentleman's feat, and feveral farm houses, as also many lakes, which abound with fish, especially trouts.

Three miles from South Ronalfa lies Burra, three mile, long and one broad, fruitful in corn and palturage, and affords excellent fuel. Stewart of Mains built a noble and sumptuous stone house here. This ifland '2 belongs

West from this lies Flotta, five miles long, and three and a half broad, most of it encompassed with high rocks. It has a church, and a gentleman's seat; and abounds with excellent land sowl in its heaths, but has little corn ground, and not many inhabitants.

Near this lie Fara, Cava, and Granfey, fruitful

and pleafant, though fmall islands.

We pass by feveral holms, as they call them, which we left for passurage, and come to Pomona, the largest of the Orkney islands, and for that reason called the Mainland. It is very regular in its form, shooting northward about 16 miles in length, and about nine in breadth. It is very fruitful, and well inhabited; though there are no trees in all these islands, but what grow in the bishop's gardens at Kirkwall, the only town in Orkney, a royal burgh, long possessed by the Norwegians, pleafantly fituated upon a bay, near the middle of it. It is about a mile in length, and is the feat of justice, where the sherists, &c keep their courts. It confifts of one street, which is narnow; but the houses are well built, and most of them overed with flate. The crown had formerly a strong calle here, which now is in ruins Near the calle flands a stately house, formerly the bishop's feat, and near to that a palace, which was begun by Patrick Stewart, earl of Orkney, in the year 1574, but not finished, because of his untimely death: feveral rooms of it have been curiously painted with Scripture stories. At the north-end of the town is a fort built by the English, during Oliver Cromwell's administration, diched about, with a breaft-work, and other fortifications, on which they have some cannon planted, for the defence of the harbour. There is a stately ca-bledral church here, called by the name of St. Mugmu, who, the natives fay, was their first apostle: it VOL. I'

great hole, by which criminals and victims were tied. and East from the Mainland lies Coppinsha, a small 14 but very high island, fruitful in corn and grass; has good fishing, and abounds with fowl. It is very con-fpicuous to seamen, as is the holm to the north-east or a is a of it, called the Horse of Coppinsha.
two North from the Mainland lies Shapinsha, five or

hree fix miles long, and three broad; it has a very fafe

four

it.

North from the Mainland lies Shapinsha, five or hree fix miles long, and three broad; it has a very safe bail harbour, and a parish-church.

To the south-east lies Stronsa, seven miles long, and four broad. well known, because of its good is sall harbours, to those who frequent this country and dries sall harbours, to those who frequent this country and dries sall harbours, to those who frequent this country and dries sall harbours, to those who frequent this country and dries sall harbours, to those who frequent this country and well inhabited; and has a rock belonging to it, called Outwall, kerrie, remarkable for its good sistery.

A little north east of it lies a little pleasant isle, called Papa-Stronsa, very fruitful and well inhabited.

Farther north lies Sanda, about 12 miles long, and 3 and broad, well inhabited, and has two harbours; it abounds with cattle, hay, and fish; but the inhabibitants are too, obliged to bring their suel from Eda, which lies west of it; it is 10 miles long, and in some places five miles broad. I here is good falt made here; and it abounds with fish.

To the north-west lies Rousa, 8 miles long, and 6 broad; it has many promontories, and high hills, but sown; also with fowl, fish, and rabbits.

There are several other islands in the neighbouries of the coast; it has a fase road for ships, is very leasant and fruitful, and has a parish-church.

Eight miles north from Kirkwall lies Eglisha, 3 miles long, and 2 broad; it has a fase road for ships, is very leasant and fruitful, and has a parish-church.

Five miles north-east lies North Fara, 3 miles long: a tis but thinly inhabited, but affords the general commodities of the country.

Vol. IV.

Vol. IV.

314 ORKNEY ISLES.

South Fara, which lies near Burra, is much of the fame extent and nature.

North from Eglisha lies Westra, eight miles long; in some places sive, and in others three miles broad; it is well inhabited, abounds with corn, cattle, fish, and rabbits; and has a strong castle, with a conve-

nient harbour.

Two miles north-east lies Papa-Westra, three miles long, a mile and a half broad, is well inhabited, has a good harbour, and, together with the other Westra, makes up a parish. In this island stand, near a lake (now called St. Tredwell's Loch), two obelishs, in one of which is an hole used by the heathens for the tying of criminals and victims; and, behind them, lying on the ground, a third stone,

hollowed like a trough.

The people of the Orcades are generally healthy, flout, and well proportioned: they are more numerous than might be imagined. Bleau, in his Atlas, fays, they mustered 10,000 men at once, near Kirkwall, fit to carry arms, besides those that were lest to cultivate the ground. The commodities, which they export yearly, are butter, tallow, hides, barley, malt, oat-meal, fish, salted beef, pork, rabbit-skins, otter-Ikins, white falt, stuffs, stockings, wool, hams, quills, down, feathers, &c. Molucca beans, figured stones, and peculiar forts of fish and fowls, are found here. The Claik geefe, or barnacles, which are rec koned to breed in the trunks of trees, or in the time ber of old ships, and have been so frequently seen about these and the neighbouring islands, have occafioned abundance of wrangling among the learned Some of them have denied the matter of fact, and boldly afferted, there could be no fuch thing in na ture, as that birds should proceed from trees; others who could not refift the evidence of fo many person of credit, who had feen and attested the hanging of bird

person ging o birds of that fort to the trunks of trees, &c. have had recourse to such strange philosophical notions for explaining this phoenomenon, as still made the thing more ridiculous and incredible. But there are two ways to folve this difficulty, found out by modern authors, both of which feem very probable: the first is the concha anatifera, mentioned by Sir Robert Sibbald, in his Natural History of Scotland, book III. part II. chap. 12. wherein he fays, that those shells stick to fea-ware, or logs of fir, and fuck nourishment from them; that the animal contained in those shells is a fish, but unshapely, and sends out such a multitude of feet, as refemble hair, which the unwary observer takes for feathers: and of this animal Sir Robert has given us a cut at the end of his book. Dr. Wallis, in his Description of Orkney, has done the like; and tells us, he has feen some thousands of those concha, flicking to logs of wood driven afhore in that country. But the folution given by a late author, in his Curiofities of Nature and Art in Husbandry and Gardening, printed at London, p. 311. feems to be still more plain, if the fact be true, viz. that the barnacles lay their eggs, as fish do theirs, and leave them at the mercy of the waves; and that as they float, they flick to what they meet, especially rotten wood, sea-ware, and other maritime plants, upon which we may obferve a glutinous substance; and that they are hatched there by the heat of the fun.

The people of the Orcades, generally speaking, are very civil and industrious, hospitable, sober, and religiously disposed. Though the air is sharp and cold, yet it may be called temperate. They are generally long-lived, the women handsome, bearing children sometimes at 60 years. They are seldom afflicted with severs, stone, or gout; but are often liable to the scurvy, agues, and consumptions. They generally speak the English tongue after the Scots way; but

P 2

mani

316 ORKNEY ISLES.

many ancient people of the poorer fort speak the Norse, Norway, or old Danish tongue, which has been continued from the first planters of these islands. They have plenty of black cattle, sheep, swine, rabbits, geese, and several forts of sish. I hey export great quantities of oil, butter, and salt-sish, which turn to good account. Their corn-land is every where inclosed; and without these inclosures their sheep and swine, and most of their cattle, go loose, without an herdsman.

They formerly had their own kings, after the manner of the Piets, who were harraffed by the Romans; but, by the injury of time, or negligence of writers, only two are come to the knowledge of posterity, viz. Bladus or Balus, and Ganus, who was cotemporary with Caractacus, the 18th king of Scotland, in the

first century.

These isles, it is likely, were under their own princes (of the PiEtish blood), till they were subdued by king Kenneth Macalpin, about the year 840. But, anno 1099, Donald Bane having affigned them to the king of Norway, for affifting him in his usurpation, the Norwegians invaded them; and were mafters for about 164 years, when Magnus king of Norway fold all again to Alexander king of Scotland, who gave the property hereof to a nobleman, furnamed Speire, an heirefs of whose family brought it to the Sinclairs, or St. Clares, one of whom carried the title of prince of Orkney, duke of Oldenburgh, &c. and married a daughter of the king of Denmark. But one of his succesfors having forfeited, the title and estate fell to the crown; though, in truth, the Scots reaped but little profit by them, being often diffurbed by the kings of Denmark and Norway, who claimed the fovereignty; and, in some measure, continued possessed of it, till the marriage of king James III. with a daughter of Denmark, when they were first mortgaged for a great

fum, due then by a contract; and thereafter, upon her bringing forth a fon (afterwards king fames IV.) the entire right to them was furrendered to king James III. which was farther confirmed to king fames VI. upon his marrying Anne his queen, the king of Denmark's daughter. The earldom of Orkney, and lordthip of Zetland, continued in the crown, till queen Mary, being to marry James Hepburn, earl of Bothwell, by fatal advice of her privy council, advanced him to the dignity of duke of Orkney. After his death, king James VI. created a natural fon of king James V. earl; which failing in his fon, it returned to the crown; and, anno 1647, William Douglas, earl of Morton, having advanced, as he faid, great fums to king Charles 1. procured this country in mortgage for his money; but it was redeemed, and, by act of Parliament, all re-annexed to the crown, anno 1669, excepting what belonged to the bishop; which act suppressed the office of sheriff, and erected one with a different name, viz. to be called, the Stewartry of Orkney and Zetland. But the faid country, by the Union-Parliament, was diffolved from the crown; and her late majesty thereupon granted the same to the then earl of Morton, for payment of the yearly fum of 500 l. and appointed him fleward and justicier within the bounds thereof. The late earl, however, fold, as before observed, those offices, &c. to the present Sir Lawrence Dundas. Under the steward are some judges of his creation and appointment, called bailiffs: in every parish and isle there is one. Their office is to overfee the manners of the inhabitants, to hold courts, and to determine in civil matters, to the value of 101. Scots (16s. 8d. English); but if the matter be above, it is referred to the steward, or his deputy. Under and subservient to those bailiffs are fix or feven of the most honest and intelligent persons within the parish, called Lawright-men: these in their P 3 respective

respective bounds, have the overlight of the people, in manner of constables, and inform the bailiff of fuch enormities, as occasionally happen, which the latter punishes according to the importance and circumstances of the fault; and, if it be above his limits, or the extent of his power, he fends the delinquent to the feat of justice, which is held, as we hinted, at Kirkwall, by the steward, or his deputy. These lawright-men have a privilege inherent to their office by the custom of the country, which is not usual elsewhere; and this is, if there be any suspicion of thest, they take some of their neighbours with them, during the filence of the night, and make fearch for the theft, which is called ransacking, from ransaka, which is to make enquiry, in the ancient Danish: they search every house they come to, and feizing him upon whom the theft is found, bring him to the feat of justice.

The Christian religion was not only preached, but planted very early in these isles; for we find Servanus (or St. Serf) was their bishop, and preceptor to the famous Kentigern (whom, in a familiar way, he called Mongah, or Mungo, in his vulgar tongue), who founded the bishopric of St. Asaph in Wales, about the year 560, and who had been also bishop of Glasgow. And anno 1071, the people of Orkney fent one of their clergy to York, with letters, defiring that archbishop (who was then, in fact, possessed of a jurisdiction over the church of Scotland) to consecrate him to be their The last popish bishop was Adam Hepburn, bishop. who conformed to the Reformation, and lived many years after it. He was an eminent man in his time, a lord of council and fession; he crowned king fames VI. was father to the lord Holy-rood-house, where he was abbot, and where his tomb remains to this day. The brave lieutenant general George Hamilton, fieldmarshal of Great Britain, was earl of Orkney.

The bare description of these islands, short and simple as it is, will be abundantly sufficient to shew, (fays a learned and modern writer*) that the Orkneys are very far from being mean or inconsiderable, even in point of territory or extent; fince, taken together, they are equal to the county of Huntingdon in South Britain, of much the same size with the principality of Neufchatel in Swifferland, and not at all inferior in this respect to Zealand, which is the third of the United Provinces. In point of fituation, these islands have also many, and those very fingular advantages, They are in the very centre of trade, or at least might he made fo, to all the northern kingdoms of Europe; they lie open at all featons for the navigation to and from America, and are feated in the middle between the Shetland and the Western Islands; to which we may add, that veffels from them may run down with equal facility either on the east or on the west-side of Great Britain.

field.

The

This subject may be, (and surely, on all the principles of humanity, justice, and found policy, it deferves to be) placed in a stronger and more conspicuous point of light; for, though hitherto little confidered, these remote islands are most conveniently and happily disposed, from their different sizes and circumstances, for the introduction of many valuable commodities from foreign countries, to encrease the number of their materials; and the fame methods might be used for the improvement of their own breed of horses, swine, sheep, goats, and black cattle. Thus supplied with the means of an easy and plentiful sublistence, together with an additional stock of commodities, proper to exercise their skill, their labour, and their application, and the present inhabitants being inftructed by a few families fent and fet-

[.] Campbell's Pelitical Survey of Great Britain, Vol. I. p. 662.

tled among them for that purpose, these isles, in the space of a sew years, would be made, what it is the undoubted interest of Britain they should be made, the seats of a variety of manusactures; by the help of which, the people who live there would quickly be enabled to carry on a beneficial and extensive foreign trade; more especially if to, or rather previous to, all these considerations, we add, that which is indeed the most obvious improvement, their entering into, and steadily pursuing what was intended them by na-

ture, almost every kind of fishery.

There is no doubt of the possibility of embracing most, if not all these means, of emerging from want and infignificance; and if a few vigorous steps were once taken, in order to give a beginning to any of these, it would foon change the face of affairs in the Orkneys. We should then gradually see, what furely was the defign of Providence, every island, holm, and rock, applied to some useful purpose; and the people being enabled and encouraged to be industrious, would, feizing with alacrity what they have fo long and ardently fighed for, become active in agriculture, fishing, manual arts, navigation, and commerce, and of course, from the vigorous exertion of their own industry, become easy and happy. As the natural and infallible confequence of fuch a change, instead of their being as they are of little use to themselves, and scarce at all known to the inhabitants of the southern parts of Britain, it would, in no very long space, bring their numerous islands to be esteemed a very valuable and profitable province of the British empire.

It is, from the preceding account of these isles and their produce, rendered manifest, that there are sufficient materials in them to work upon; and, indeed, this was observed and insisted upon above a century ago. But because it was neglected then, and has been so ever since, it does not sollow, that it ought to

be neglected for ever, more especially by so potent a nation, and in an age of speculation like this, so fertile in, and fo famous for, its its improvements. The Orkneys, from their centrical fituation, feem to be extremely fit for the erecting a general magazine of all things requifite for every kind of fishery, and being within a day's fail of the Western Islands on one side, and the Shetland Isles on the other, they might be commodiously furnished from thence with the means of entering at once upon this important branch of hufbandry, in their own bottoms, and for their own benefit, which would infallibly, and without any other affiftance, put this trade totally and for ever into the hands of British subjects. Several of these islands are no less happily disposed for the Greenland and North American whale-fishery; for here they might deposit their stores, bring hither their blubber, extract their oil, and from hence export it in casks to proper markets In time of war, these islands would be an excellent station for a small squadron of his majesty's thips, as well for the protection of our own commerce, as for annoying that of our enemies; in which light alfo, its ports and roads would be very convenient for privateers.

It would be highly expedient to introduce the Dutch model, for rendering illands, in their own nature much worse than these, rich and slourishing. This is no other, than maturely considering, and then carefully adapting, particular matters to such islands, as from their fize, situation, produce, and natural advantages, are sittest for their reception. Such, for example, as encouraging boats, sloops, and bark-building, in any island where there are many creeks and bays of different sizes, for the commodious launching and convenient reception of such vessels when built. The encouraging, in some or other of the larger islands, the raising and manufacturing of hemp and

P 5

flax, for the important purposes of making twine, nets, cordage, and other fishing and naval stores, than which nothing would be easier, when sufficient markets are once open for them among themselves.

These are modes of improvement which have been, fome of them at least, mentioned long ago, and are all of them fo plain and obvious, that they cannot be controverted; but there are two others which must not be omitted. The first is the erecting an university, which might be done at a very small expence, added to the application of what the people pay in virtue of the old ecclefiastical establishment. This university, from the centrical fituation of the Orkneys, would probably be attended with the following happy effects. First, it would take away the necessity of sending the youth out of the country, where their parents are compelled to be at the charge of their education, and who, from this very circumstance of being brought up in another place, and accustomed to other objects, people, and manners, are so weared from their country, that not one in five of them return. In the next place, it would fave the expence which their parents are now at, or, in other words, would keep confiderable fums of money in the country, (which now, and unless fome such remedy is applied, will for ever go out of it), and consequently contribute to encrease the circulation, which is a point of infinite importance. Laftly, it would attract numbers of young persons from the northern extremity of the continent, from the islands, and it may be from Norway, Denmark, and Germany, which would bring both men and money into the Orkneys, and be productive of other advantages.

If this description and account of their produce and resources, should be so fortunate as to throw light sufficient on this subject, to induce any able and intelligent administration, to look with attention upon

the any ties : lum haps vour those woul other comi rever adva vaft ing t know us? ligen labou this b ies, t comn our n arts, mutu: not to coura put it

the Orkneys, and by the methods here proposed, or any other, enable the inhabitants to turn their abilities and labour to their own, and to the public emolument, it will certainly produce very falutary, perhaps very furprifing effects. The bringing the endeayours of 30,000 persons to live in that ease, and with those comforts their fellow-subjects in general enjoy, would encrease their correspondence with Britain and other countries, promote the confumption of their commodities and manufactures, and consequently the revenues of the excise as well as customs. advantages we have fought, by peopling countries at a vast distance: would there be less prudence in drawing the same resources here at home, especially as we know not how foon our distant connections may fail us? These people are confessed to be frugal and diligent; but they wish to find the sweets of their own labour, and to feel their industry rewarded. What is this but an earnest inclination to resume their fisheries, to ferve on board our fleets, to bring more raw commodities to our markets, in order to carry more of our manufactures to theirs, to be instructed in our arts, to copy our examples, and thereby add to the mutual splendor of the British islands? Ought we not to turn an eye to fuch people, ought we not to encourage their defires? In a word, ought we not to put it in their power to pay us tribute?

From this general furvey of the Orkneys, let us proceed to the SHETLAND ISLANDS, between which and the former lies the Fair-IJe, which, rifes up in three high promontories, and is feen both in Orkney and Shetland. It is full three miles long, scarce half a mile broad, and very craggy. There is in this island a small quantity of arable land, which is very fruitful, and well manured: they might have considerably more; but they are obliged to preserve this for peat and pasturage. They have, for the size of the

island, a great many sheep, and those are very good and sat; but they have no kind of moor-sowl or other game, but great plenty of sea and water-sowl, and all kinds of sish upon their coasts. They have a very pretty church, but no minister, being annexed to one of the parishes in Shetland, or served by an itenerant minister, as some late accounts affert. A layman reads the Scriptures every Sunday in the church, the inhabitants being a very religious, harmless, sober, and honest people. This island produced to its late proprietor between 50 and 60l. Sterling per ann. and was fold at Edinburgh, in the year 1766, for the sum of 10,200l. Scots, or about 850l. Sterling, to

Fames Stuart of Burgh, Efq.

The first of these islands, called the Mainland, is 60 miles long, and, in some places, 16 broad: it runs into the fea with abundance of promontories. It is best inhabited, and cultivated, on the shore; but the inner part is mountainous, and full of lakes or bogs, which makes travelling there dangerous to strangers. The air is cool and piercing; yet many of About the fumthe inhabitants live to a great age. mer folftice they have so much light all night, that they can fee to read by it. The fun fets between 10 and 11 at night, and rifes between 1 and 2 in the morning; and, on the other hand, they day is so much shorter, and the night longer, in the winter; which, with the violence of the tides, and the tempestuousness of the seas, deprives them of all foreign correspondence from October to April, during which time they hear nothing of what passes in other parts of the world. A known instance of this was, that though the Revolution happened to begin in November, they knew nothing of it till the May following, when a fisherman, who arrived there, told them of it; and then they imprisoned him, in order to try him for fpreading fuch news.

They are much subject to the scurvy, by eating too much sish; but nature has surnished them with

great quantities of scurvy grass for an antidote. They have little corn of their own growth, and therefore import great quantities from Orkney. Their common drink is whey, which they barrel up, and keep in cold cellars; this makes it very strong, so that it quickly turns their heads. Some of them keep for their drink butter-milk mixed with water, and this they call Bland. The better fort have good beer and ale, of which they are very liberal to strangers. They have abundance of fish of all forts on their coasts for most part of the year: those that abound most are cod, ling, and herring. They have also shell-fish of all forts, with whales, feals, fea-calves, and otters; and in the winter-time they burn oil of fish instead of candle. They abound with all forts of fowl, except heath-cocks; and other fowls, which frequent heaths, will not live there, when brought thither, though they have abundance of heath. They have store of geese, and many forts of ducks. They have plenty of little horses, which they call schelties, very fit for the husbandman's use, and pace naturally. They make coarfe cloths, stockings, and knit gloves, for their own use, and also for sale to the Norwegians. Their grain is oats and big, but most of the latter. They have abundance of black cattle and sheep. Their ewes are very prolific, and for the most part bring forth two, and fometimes three lambs at once. Their fuel is turf, peat, and heath. Their chief trade of export consists in fish, by the produce of which they pay their rent, and purchase necessaries. Their native language is old Gothic, or German, as was also that of Orkney; but they generally now speak English. In their customs and habit they much resemble the Germans; but the better fort imitate the Scots Lowlanders. Their religion is Protestant, and they are generally, as well as the Orkneymen, very devout. There were few or no Presbyterians in these parts before the year 1700, when

good ther l all very l to

with great when new missionaries came, and ejected the old clergy; yet the people did not care to hear them, so long as they had any body else. They make use of no physicians; and if at any time they receive wounds, they cure themselves. There are two little towns in this island; the first and oldest is Scalloway, on the west-side of the island, where there is a castle four stories high. The inhabitants are about 100 in number. The second and largest is Lerwick, which, by their fishing-trade, is increased now to about 300 families.

There are feveral ancient monuments in these islands, and particularly those called Picts houses.

The Dutch, Hamburghers, &c. come hither to fish in June, and go away again in August and September; and sometimes there are 2000 busses fishing in Brassa's found at once.

The most remarkable of the other islands here, are Zeal, commonly called Yell, which is said to be 20 miles long, and 8 broad. It is very mountainous, and full of moss; but there are pretty considerable pastures, in which they feed a great many sheep, and it also affords plenty of peat. It seems to have been populous in ancient times, since there are in it three churches, twenty chapels, and many Pictish forts.

Farther north lies Vuist, much of the same dimenfions, plain, pleasant to the eye, fruitful and well inhabited. It is the pleasantest of the Shetland isles, has three churches, and as many harbours.

Tronda lies over-against Scalloway; and is three

miles long, and two broad.

A little north-east lies Walfey, three miles long,

and as many broad.

On the east of Brassa's sound lies Great Rule, eight miles long, and two broad: it has a good harbour.

Six leagues west from the Mainland lies Foula. It is about three miles long, narrow, and full of rough steep.

imenell ines, has steep, and barren rocks, one of which is so large, and runs up to so great a height, as to be clearly seen from the Orkneys. It has scarce any pasturage, and very little arable land; but, though small in fize, is however very fertile, out of the produce of which, with sowl and fish, the poor inhabitants subsist. They have nothing that can be called a port, and the only commodities they have are stock-fish, train-oil, and feathers.

More to the east lies Brassa, five miles long, and two broad; it has some arable ground, and two churches.

Burray is three miles long, has good pasturage, abounds with fish on the coast, and has a church in it. No mice will live here; and it is faid, they will forsake the place, wherever the earth of it is brought.

Shetland is divided into 12 parishes; but there are many more churches and chapels in it. This country, like Orkney, has no wood in it; but they have some sish and sowl peculiar to themselves. The inhabitants are very bold in venturing to sea at all seasons for fish, and in climbing the rocks for sowl.

The chief families in Orkney and Shetland are the Bruces, Sinclairs, Mouats, Nivets, Chyneys, Stuarts, Grahams, Moodies, Douglasses, Honeymans, Trails, Bakies, Southerlands, Craigies, Youngs, Buchanans, &c. But the most ancient, and, I may say, original, are the Fletts, Hackrews, Richens, Feas, Skolas, Grottes, &c.

In the mouth of the river Forth lie feveral islands, the most considerable of which is the May: it was formerly dedicated to St. Adrian, who was martyred there by the Danes, and afterwards a religious place was built in memory of him. This island is a mile long from north to south, and about a quarter of a mile broad: it lies seven miles from the coast of Fife, has a fresh-water spring, and a small lake. No com

grows

grows here; but in the fummer it affords pasturage for 100 sheep, and 20 black cattle. The west-side is inaccessible, because of high rocks; but the east fide is plain, and has four places, where boats may arrive, one of them a fafe harbour for ships during a strong west wind. Fish of all forts are numerous on the coast of this island; and it abounds with fowl, particularly those called skarts, dunters, gulls, scouts, and kittawaax; the latter is about the fize of a dove, and in July is preferred to a partridge. The scouts are fornewhat less than a duck, but their eggs are larger than those of a goose, and, being boiled hard, eat very well with vinegar and parsley. This island of May formerly belonged to the priory of Pittenweem, but was granted in fee by king Charles I. to Cunning. bam of Barns, with liberty to build a light-house there for the benefit of thips; for the maintainance of which they were to allow 2d. per ton. A tower of 40 feet high is built there for that end, with a fire every night; and the first builder was cast away in returning from thence to his house in Fife, by a tempel which some poor old women were executed for raising.

Higher up in the Firth lies Inchkeith, betwixt Fift and Lothian, a mile and a half long, and about half a mile broad; the foil is fat, and produces good grass, and abundance of physical herbs. It has four freshwater springs, and has many harbours, one towards each quarter. It rifes in the middle, and has a strong stone fort raised upon it by queen Mary. There is a stone quarry here, which sends forth a strong sulphureous smell, when any pieces are broken off, but very sit for building. There are great shoals of sish round the coasts of this island, and abundance of oysters during the winter. This island had its name from the noble samily of Keith, whose sounder had this island, with the barony of Keith-mareschal in Lothian, and the hereditary dignity of earl Marshal in Scotland.

that, at

ment w

Sectiond, conferred upon him by king Malcolm II. in the year 1010, for his valour in the battle against the Danes at Bar in Angus. It came afterwards to the crown, and was given by king Robert II. to John lord Lyon of Glames, the chief of that family, with the barony of Kinghorn, upon his marrying that prince's daughter. It is fince in other hands. It is observed, that here horses grow fat in a little time.

Higher up, within two miles of Aberdour, lies an island called St. Colm's-Inch, as being dedicated to St. arger Columba: it had formerly a famous abbey, with large endowments; but it is now ruined; and, upon the and of alienation of abbey-lands, was given to the lord weem, Downs, a branch of the family of Stuart.

Higher up lies Incharvy, or Inchgary, between two

there promontories, near the Queen's-ferry; it was also for-which tified, and the guns of the forts could reach the shore o feet on both sides, so that no ships could safely pass it every without leave.

of the islands of Orkney, near the village of Skeal, isling, there is a fort of pavement, consisting of stones varit Fife oully figured, fome like a heart, others are above a thalf a leg, a weaver's shuttle, &c. It takes up above a thalf a leg, a weaver's shuttle, and from 20 to 30 feet in breadth. In removing any of these stones, the figure is as neat on the under-fide, as the upper; and being as big as the life, all of one colour, of a reddish kind of stone, pitched in a reddish earth, and the pavement fo very long, it cannot be any of the teffellated or chequered works of the Romans. Part of a garden-wall is decorated with these stones, and many of them are taken away by the neighbouring gentry, to let them up like Dutch tiles in their chimnies; fo that, at this rate, in less than a century, this pavement will, in all likelihood, subfift only in books.

As the herring-fishery on the coast of Shetland still is, and has long been, the diftinguishing glory of these isles, I shall give as clear, but at the same time as concife an account of it as possible, notwithstanding we have already touched upon this subject in the beginning of the volume *. The herring is a fish that has been distinguished by many honourable epithets, on account of the immense profits derived therefrom in commerce. It has the testimony of eminent physicians in its favour, as to wholesomeness, when cured tury, it in its proper season; and it is universally allowed, that the best herrings in the world are caught upon the diam Bu Shetland coasts. I have no room to enterinto conjectures or philosophical reasons, and shall therefore confine what is here advanced strictly to facts. The sirst of these is, that about the beginning of the year, the herrings, like the mackrel, plaise, and other sish of passage, issue from the remote recesses of the North, by whi in a body surpassing description, and almost exceed-

ing the power of imagination.

The first column detached, moves towards the west by the coasts of Newfoundland in North America; the eastern column, proceeding leisurely by the coast of Ireland, sends off one division along the coasts of Norway, which soon divides into two, one passing by the strait of the Sound into the Baltic, the other towards Holland, Bremen, &c. The larger and deeper column falls directly upon the isles of Shetland and Orkney; and, passing these, divide into two, the eastern column moving along that whole side of Britain, detaching gradually smaller shoals to the coast of Friezland, Holland, Zealand, Flanders, and France, while the western column passes on the other side of Britain and Ireland. The remains of this body reastern and Ireland. The remains of this body reastern and Ireland. The remains of this body reastern in the channel, and proceeding thence into We will ke a call authoritic first Britain, Vol. I. p, 692, &c.

the ocean, retire to their afylum in the North, where the deep and fafety they repair the losses they have fusianed, and being grown large and lusty, break out again at the next season, to make the same tour which has been already described.

It would be a very difficult, and, in respect to my hetes, that the would be a very difficult, and, in respect to my purpose, an almost useless undertaking, to endeavour at fixing the time when this fishery commenced. It is certain, that at the beginning of the sourcement, it is certain, that at the beginning of the fourteenth century, it was considered as a matter of great importance in this as well as in other nations. But William Buckold, who, as sothers say, died) at Bierviliet in 1386, (to whose tomb, it is afferted, Charles the fifth, and his fisher the queen of Hungary, made a visit, in acknowledgment of the services he had done the Low Countries) invented a new method of curing these fish, by which his countrymen, the Flemings, engrossed this lucrative commerce, and to distinguish them, by which his countrymen, the Flemings, engrossed the series, the series in the series i

the

state of the fishery, at the same time that it furnishes the means of gueffing, with some degree of probabi-

lity, at its vast value.

Sir William Monfon, Sir Walter Raleigh, and other writers of those days, men of experience, proper judges, and who had feen what they advanced as facts, affere us, that the Dutch employed in their times, and had long employed, two thousand buffes in the Shetland fishery. In 1633, Mr. Smith, who was fent to Shetland by the earl of Pembroke to look strictly into this affair, and to report the then state of the Dutch fishing, fixes the number of busses, when he was there, at 1500, and the vessels that were there besides

employed in the cod-fishery at 400.

It appears from very exact refearches made after the Restoration, and by different modes of calculation which checked each other, that it was then to the full as confiderable. But the subsequent wars with England and France bringing great loffes on the subjects of the States General, who had embarked their fortunes in this fishery, other nations beginning to interfere with them, and from a variety of causes, which it would be tedious here to mention, this trade gradually declined; fo that in 1762, the Dutch had no more than 200 buffes here; the British Herring Fishery a very few ships, (which, however, caught more in proportion, and cured them to the full as well as the Dutch); the Swedes had also some buffes, and there were some likewise from Oftend: from all of which, whatever they might do in former times, the natives drew but very little advantage. Though it is contrary to the orders from Holland, yet the natives frequently complain of ill usage from the Dutch buffes, by infulting, and fometimes spoiling their small boats, more especially when they attempt fishing in deep waters. However, in regard to the subjects of that republic, the herring-fithery may be at present decayed,

it would be no difficult thing to prove, to the fatisfaction of the cancid as well as critical enquirer, that while it continued to flourish in their hands, the Detch drew from their fishery out of the ocean washing the coasts of these islands, to the amount of two hundred millions Sterling.—A circumstance that may surely, in some degree, entitle the Shetland islands to the notice of Great Britain.

It is pretty evident, that if Britain had been as attentive to her interest as the Dut h, she might have drawn from the possession of the Shetland isles no small share of wealth to herself; in consequence of which, the inhabitants must have been in a much better state than they now are. The business now is to look forward, and to confider patt mistakes as proper admonitions; and there is no doubt, that they may still be made profitable by proper means, and a constant attention. A great part of the lands, at least a considerable proportion of them, that now, and perhaps without encouragement for ever may, continue useless, might be brought into cultivation, if distributed among industrious families, at very easy, and till in some degree improved, at no rents. This would give such as were settled on them a property, instil thereby a deep-rooted affection and strong attachment to their country, and furnish a part of their subfiftence.

To facilitate their fishery, which must ever furnish the rest, magazines should be erected to supply them with all things requisite for that employment, without respect of persons, at equal, and at the lowest rates; and means must be likewise found to enable them gradually to procure larger boats, busses, and other vessels, so as to put it in their power to catch, cure, and export their herrings and other fish in their own bottoms, towards which nothing would contribute more than to send a frigate annually to protect

them from the encroachments and infults of fa

reigners.

The smaller islands should be also improved, be erecting falt works in some, by establishing the manu facture of nets in others, by supplying the necessar contains, materials and conveniences for building stout boats and making casks in the larger islands. Kelp migh certainly be made even on the holms and skerries; an having that and train-oil, would lead them to the making coarse glass and soap, which would vary an encrease their cargoes. Two or three companies of the invalids, properly chosen and employed as garrison son of would prove an easy and effectual method to teach the icle, rainatives many little manual arts, and a variety of erent pauseful trades, of which they are at present ignorant and by which industry would spread, in consequence In the of its being apparently, certainly, and speedily is hat some arrested. warded.

As the people come to live better, and to brin french in home cargoes in return for their fish and other compretence modities, customs and excise would quickly repay to rere still public for the encouragements proposed; and, if the loathed was not sufficient, they might be obliged to surnish loard a certain supply of seamen to the royal navy in times being real war, which they would be very far from considering the centary for the same and the supply of seamen to the royal navy in times being real war, which they would be very far from considering the same for as a hardship.

Containing a brief Account of the Rife, Progress, and Extinction of the Rebellion raised in SCOTLAND in the Year 1745.

to the sy an SHALL now proceed to give a brief account of the rife, progress, and suppression, of the rebelrison ion of 1745, which I have reserved for a distinct arch th icle, rather than give it in detached pieces in difety o erent parts of this volume.

orant uend In the fummer of the year 1745, it was discovered, ily it hat some preparations were privately making for an repedition into Scotland; and a principal officer in the brin french navy raifed a company of 100 men, under recomb retence of the East-India Company's service, which way the rere stilled Grassins de Mer, and were handsomely if this loathed in blue, faced with red. They were put on raish loard a frigate carrying 18 guns; and, every thing imedicing ready, the eldest son of the Pretender, who had derive the form of the pretender, and privately to part Lazare, in Britany, where, on the 14th of July, we embarked with about 50 Scots and Irish, in order e embarked with about 50 Scots and Irish, in order o land in the fouth-west of Scotland.

This frigate was joined off Belleisle by the Elizabeth, man of war of 66 guns, which had been taken from s by the French, and was now extremely well maned for this fervice. In their passage she fell in with fleet of English merchantmen under convoy of three E Then of war, one of which, viz. the Lion, commandd by the gallant captain Brett, engaged the Elizabeth or nine hours; but foon after the engagement began, he frigate bore away, and continued her intended

voyage.

voyage. The Elizabeth, when night came on, made a shift to get away, and returned to Brest quite disabled, having her captain and 64 men killed, and 130 dangerously wounded. She had on board a large sum of money, and arms for several thousand men.

The frigate cruifed for some days between the islands of Bara and Ust, and at last stood in for the coast of Lochaber, and there landed, betwixt the islands of Muil and Skie, the young Chevalier, and his attendants. He went first to the house of Mr. Macdonald of Kenloch-Moidart, where he remained so some time before he was in any condition to shew himself in public; but, about the middle of August, being joined by the Camerons of Lochiel, the Macdonald of Glengary, the Stuarts of Appin, and others of the clans, to the number of between 1500 and 2000 men, he resolved to set up his standard. This was accordingly done, and the motto he made choice of wa Tandem Triumphans, that is, At length Triumphant.

About the middle of August he appeared with his forces in the neighbourhood of Fort William, and about this time published several of his father's manifestoes; among which was one dated in 1743, which plainly shewed that an invasion was then intended; another in 1745, delaring his fon regent; and a third containing large promifes to the people of Scotland Soon after, two companies of St. Clair's regiment fel in with the rebels, whom they were fent to reconnition and were most of them taken prisoners, as captain Sweatnam of Guife's regiment was presently after; bu he was released upon his parole; and it was from this gentleman that the first distinct accounts were ob tained of the force, disposition, and design of there bels, who began then to think themselves strong enough to march fouthward.

Lieutenant-general Sir John Cope, commander is chief of the king's forces in Scotland, drew together

On the 7th, the rebels demanded half a crown in the pound from the landlords of houses in Edinburgh, under pain of military execution. About the middle of this month, they were joined by confiderable reinforcements under the command of feveral persons of diffinction, particularly old Gordon of Glenbucket, hom, Forbes, lord Pitfligo, the earl of Kilmarnock, and others. They likewise received from abroad considerable supplies of ammunition, military stores, small arms, and some field-pieces. There was also one Mr. Boyer, or, battle as he stilled himself, marquis De Guilles, came over from in one of these vessels from France, as an agent, whom they dignified with the title of ambassador. Towards they dignified with the title of ambalfador. Towards Hadthe latter end of the month, a great part of their army Perth; muched to Dalkeith, to which place they removed their es for field-pieces and ammunition; and, having erected a fille of battery at Alloway, to secure the passage of the Firth, they transported, from Montrose, Stone-hive, and other places, the supplies they had received from abroad, and made other dispositions to march southward.

Mean time field marshal Wade, commander in

Mean time field marshal Wade, commander in enche chief of the army intended for the north, began to upor move that way with his forces; consisting of some men English regiments, both horse and soot, together with by south the Dutch auxiliaries, and a train of field artillery,—The while a body of British troops, under the command of e, and the earl of Albemarle, landed at Newcostle. The Tryal button loop likewise brought into Bristal, a Spanish ship, on or 500 poord of which were 2500 suits with bayonets, and stilliste too barrels of gunpowder, seven chests of money, the burth of the control of the rebels. By this burth Mean time field marshal Wade, commander in burgh time

time likewise the militia in the northern counties were raifed, and affociations and voluntary contributions fet

on foot in most parts of the kingdom.

In the county of York particularly, through the timely vigilance and zeal of the archbishop (Dr. Themas Herring) affisted by the nobility and gentry, four new regiments were raifed, cloathed, and disciplined, at the expence of the county. There was likewife a confiderable body of gentlemen volunteers on horseback, stiled the royal hunters, who served at their own expence, put in motion under the command of major-general Ogletherpe. In Scotland, the lord prefident of the Court of Session, Duncan Forber, Efg. diftinguished himself by his zeal and activity, in diffributing commissions for raising several independent that the companies in the North; which were to be put under the command of the earl of Loudon; fo that by the end of the month there was an army of 14,000 men long about the north of England, and a very confiderable body raised in the North of Scotland, for the security of Inverness, Fort William, and other garrisons there: which military preparations, joined to the loyal spirit which shewed itself in all parts of the nation, and more particularly at London, very probably disappointed the designs of the disaffected, hindered who acted many from joining the rebels, and even drew off some, who had gone to Edinburgh with that resolution.

On the 1st of November the young Chevalier came whom, we to the camp at Dalkeith, and there fixed his heading spies, or detachments, to see what was doing in the North of England. He had, however, but confinding the North of England. He had, however, but confinding several of his emissaries being seized at Newcostle, Marsha Berwick, and other places. He detached two advanced corps from thence, one of which marched towards narched to Pennycook, and the other to Loanhead, both places be eccessary to the company of the confine to the confidence of the confidence companies in the North; which were to be put under

ing

But though, in regard to their interests, those people were honoured with those commands, it was known, dent that the Pretender confided entirely in a few persons, that the Pretender confided entirely in a few persons, most of whom came over with him. At the head of the his councils was Sir Thomas Sheridan, who had been long about him, an Irish gentleman, of a middle age, and reputed a man of capacity; colonel Sullivan, who had been a little while in the French service, and was somewhat of an engineer; general Macdonald, an Irish officer who was his aid de camp: Mr. Kelly, who was so long in the Tower on the affair of Atterbury, bishep of Rochester; and Mr. Murray of Broughton, who acted all along as his secretary. The number of some men that the young Pretender had with him at this juncture seems to have been about 7000; some of came whom, when they considered the dangers to which head hey were exposed, deserted. But, notwithstanding send in the sund other disappointments, the rebel chiefs, coning in lining firm in their first resolution, began to pass the tool Tweed on the 6th, and the same day their advanced so, and yeards entered England.

Marshal Wade, who was by this time arrived at New-ances wards arched to sight the rebels, if he had not found it tees be teessary to be first informed, whether they really intended

tended to invade England, and which route they meant to take, that of Newcastle or Carlisle. He caused likewise a declaration to be published, promising pardon to such of the Highlanders, as returned to their duty by the 12th of November; and took such precautions for the security of the adjacent country, as obliged the rebels, who were too far advanced to think of retiring into Scotland, to throw themselves into the western road, to which their people in general, and most of their chiefs seemed at first to be least inclined.

The rigour of the feason, their late forced marches, and a kind of flux among the foldlers, retarded the operations of the king's troops for fome time; but good quarters, proper refreshments, and the extraordinary care of their officers, soon overcame those disticulties, and put the army into so good a condition, as enabled them to go through the winter campaign with sewer inconveniences, and much less loss, than could have been reasonably expected, considering the great hardships, and excessive fatigues to which those corps particularly that had served all the summer in Flanders

had been exposed.

On the 7th of November the rebelarmy advanced to Halyhaugh, and from thence fent out parties to fcour the adjacent country. On the 8th, they came to Langton; and on the 9th they appeared on a moor two miles from the city of Carlifle. This place was formerly very strong, and considered as a bulwark against The best part of its old walls were standing; and the castle, though an ancient irregular fortress, had such remains of strength, that, in the opinion of colonel Durand, who commanded there, it was tenable against a better army than that of the rebels. In point of force there was the whole militia of the two counties of Cumberland and Westmorland, and some invalids in the castle; so that, when the young Pretender summoned them, they absolutely 16fuled

It is faid, that the officers were inclined to march on; but the men shewing a desire to return to Carlifle, it was not judged adviseable by their superiors to cross their inclinations: and therefore, after cutting a great deal of wood for fascines and scaling-ladders, in Corby and Warwick parks, they, on the 13th, began to move back towards Carlifle. The place, in all probability, might even then have made a defence; but the threats of the rebels had fuch an effect, that the white flag was hung out, and the town capitulated on the 15th, and the callle too was given up; but the governor took care to withdraw, as difliking the terms, and perfifted in his first opinion, that the place might have been defended. Thus this city fell into the hands of the rebels, who immediately caused the Pretender to be proclaimed, and put a garrison into the caille, under the command of the duke of Perth.

As foon as marshal Wade had intelligence at Newcoffle of the route which the rebels had taken, he refolved, notwithstanding the severity of the season, to march from thence to the relief of Carlifle; and accordingly on the 16th, the army began to move for that purpose. His excellency intended to have begun his march, as foon as it was light; but moving from the left, the Swiss troops had the van, which delayed their motions several hours, to the great prejudice of the expedition; for the weather being excessively cold, attended with a deep fnow and a hard frost, the troops fuffered very much. The major-generals Howard and Oglethorpe, and the brigadiers Cholmondeley and Mordaunt, marched on foot at the head of the infantry to encourage the foldiers. It was eight at night, and very dark, before the front got into the camp at Ovington; and though the foldiers marched with

Q4

great chearfulness, yet, the roads being terribly broken, and full of ice, it was foreseen, that many of the last column might drop through excessive fatigue; and therefore the major-generals Huske and Oglethorpe fent out countrymen with lights and carts, to assist the rear-guard, and bring up the tired men; in which fervice they were employed till near nine the next

morning.

On the 17th, the marshal continued his march to Hewham, where he arrived with the first line about four in the afternoon; but the rear of the army did come up till near midnight. His excellency having intelligence that Carlisle had surrendered, resolved to march back to Newcasile; but the weather continuing bad, and the roads being become in a manner impassable, he did not arrive there with the army, till the 22d; and even then the forces under his command were so excessively satigued, that, if it had not been for the great care taken of them by the people of Newcassle, who shewed the utmost zeal and affection in providing them quarters, they must have been in a great measure ruined by this satiguing march.

This invasion of the rebels having thrown all the northern and north-western parts of the kingdom into great consustion, directions were given for forming another army in Lancashire. The city of Chester was also put into a condition of defence, in a surprizing short space of time, by the care and diligence of the earl of Cholmondeley. At Liverpool likewise, all necessary precautions were taken, and the inhabitants of that town shewed all the spirit and resolution that

could be defired.

The rebels did not continue long at Carlifle; for on the 19th the young Pretender made his entry into that city, and on the 20th his forces continued their march to Penrith, from whence they advanced, on the 22d, to Kendal; moved from theuce to Lancofter

on the 24th; and on the 27th reached Presson. They were at Wigan and Leigh on the 28th; and in the asternoon of the same day an advanced party entered Manchester, where they began to beat up for volunteers, but with much less success than they expected, though some sew people joined them; and they had likewise picked up some persons of desperate fortune in their march; but, however, nobody of any rank or distinction came in, which, without doubt, was a great disappointment; for they had slattered themselves with the hopes of a considerable insurrection in their savour.

On the 29th, the main body of their army moved towards Manchester, and about ten in the morning their horse entered the town. About two in the asternoon the young Pretender, at the head of a considerable body of picked Highlanders, and in their dress, marched into Marchester, and was proclaimed. At night the rear of their army arrived; but though they had demanded quarters for 10,000 men, it was judged they never had in Manchester above half that number.

On the 30th of October, a part of the rebel army marched for Stockport, and the rest for Knutsford: they carried off all the horses they could meet with in the neighbourhood of Manchester; at night several parties croffed the river Mersey at different places, over bridges made of trees and planks laid across, in framing of which, they compelled the country-people to affift them. It is very remarkable, that in their whole progress no discoveries could be made of the routes they. intended to take, because they were never given out above an hour before their march began; and neither officers nor foldiers knew over night, whither they were to go, or what service they were to perform, the next morning: which fecreey, in all probability, pre-Q 5 ferved

ferved them from destruction; since, however formidable they might be at a distance, those who saw them at Manchester, and other places, were very far from thinking they made a dreadful appearance.

In the mean time the duke of Cumberland's army was forming in Staffordshire: for, upon the approach of the rebels, it was refolved, that his royal highness should be fent down to command the forces in that part of the kingdom; and accordingly he arrived at Litchfield on the 28th of November; that army being fupposed to consist of upwards of 12,000 men, well furnished with artillery, and making a fine appearance.

The army under the command of field-marshal Wade began to move towards the latter end of the month, the cavalry having reached Darlington and Richmond by the 25th; and on the 29th, marshal Wade, with the infantry, was at Persbridge; from whence he proposed to march to Wetherby, and to canton the whole army in the adjacent villages; looking upon this as the most convenient fituation, either for distressing the enemy, in case they should attempt to retire, or for co-operating with his royal highness's forces, as occasion should require. By these well concerted dispositions, all apprehensions of danger were in a great measure taken off, and the country people began every where to recover their spirits, and to put themselves in the best posture of defence they could, for fear of being visited by these Highland invaders. Such was the fituation of things at the close of November; and we now return to the progress of the rebels fo long as they continued to perfift in their wild defign of advancing into South Britain.

On the first of December, the young Chevalier, with the main body of his army, and all his artillery, entered Macclesfield; and at this time the greatest part of the rebels really expected an engagement, as appeared

by their scaling, siring, and putting in order their pieces all the asternoon and evening of that day. But what were the true intentions of the Chevalier, and his councils of war, it is impossible to say, since at first it was believed, they intended to march into Wales; but perceiving that, if they should accomplish that scheme, they should certainly be shut up there, and reduced to great necessities in a mountainous country, with which they were not acquainted, they abandoned this project as impracticable. On the 2d, about 2000 of their soot passed by Gowsworth, and about the like number of horse and soot entered Congleton; and the next day, these two great bodies of their sorces advanced, one of them to Leek, and the other at Ashburn, within 15 miles of Derby.

On the 4th in the morning, the Pretender's fon entered Derby with near 5000 horse, and about 2000 foot; and in the evening the rest of their forces, their artillery, and baggage, arrived there likewise; but with all the precaution possible, to hinder any exact account from being taken of their numbers; which was a point they laboured with the utmost diligence during their whole march. On their first coming into Derby it was judged, both from the measures they took, and from the behaviour of their chiefs, that they were fill disposed to march on. In the evening, however, they held feveral councils of war, in which the disputes among their chiefs rose so high, that they could not be concealed; yet they agreed upon nothing that night, except levying the public money, which they did with unusual circumstances of terror and violence. The next day they continued at Derby, and bout noon in a council held, in the presence of the young Pretender, a final resolution was taken of returning back into Scotland.

It was observed by the people of the houses, where heir principal commanders quartered, that, upon the Q 6 rising rifing of this last council, their chiefs looked very dejected; and that some of them railed at the French and Lish about the young Pretender, and others made no scruple of saying they were betrayed. This is certain, that, whatever was the matter, they were thence-forward always diffident of each other; and that the Pretender himself was afterwards not much consider-

ed, and but indifferently obeyed.

The duke of Cumberland, at the head of the king's forces, took all imaginable pains to force the rebels to a decifive engagement; and (when that was found impossible) to hinder their march into North Wales, or to alarm the nation by continuing their incursion, and advancing farther into the heart of the kingdom. In order to effect the former of these purposes, his royal highness advanced to Stone, upon the first advice of the rebels being at Congleton; but when it appeared, that their true defign was to march to Derby, the king's forces moved towards Northampton, to intercept them in their route fouthwards; and having been informed, that the rebels had poffeffed themfelves of Swarkston bridge, his royal highness encamped on the 6th with the greatest part of the forces on Meriden Common, between Colesbill and Coventry.

In the mean time marshal Wade had marched the army under his command to Wetherby, where he encamped on the 5th; and the same day orders were given for the horse and dragoons to proceed to Doncaster, whither the foot were to follow them. These dispositions afforded sufficient reason for the rebels to retreat, since whoever considers them attentively, will find, that, in the first place, it would have been very disficult for them to have proceeded farther, without meeting with, and being obliged to fight, the duke's army, which was what they never designed; and, on the other hand, if they had succeeded in their scheme, and by some means or other continued

Before we proceed farther, it is requifite to observe, that the fecond fon of the Pretender being arrived in France, there were about this time vast preparations made for the invafion of this kingdom; and though, by the timely and prudent precautions taken by the lords of the Admiralty, they were prevented, yet they occafioned a great deal of confusion, and proved, in that respect, of some service to the rebels; but, in another fense, they were of service to the nation, since they not only kept alive, but heightened, that spirit of zeal and loyalty, which had appeared from the breaking out of the rebellion, and of which all ranks and degrees of geople gave at this time fuch lively testimonies, as were sufficient to convince even our enemies, that his late majesty reigned in the hearts and affections of his subjects, as well as over their persons.

Yet, in North Britain, the flame of rebellion began again to spread itself, by the affistance of the French; for lord John Drummond having landed with about 500 men at Aberdeen, Peterhead, and Montrofe, he was very foon joined by that body which lord Lewis Gordon had been raising in the North, as well as by other of the disaffected clans, such as the Mackenzies, the Mackintoshes, the Farquharsons, and the Frafers, to the number of between 2 and 3000 men; with which forces he drew down towards Perth, about the time the young Pretender was at Derby. The earl of Loudon, who was at the head of a small body of men for the king's fervice in the North, spared no pains or diligence in exciting the well-affected clans to join him; and by the reinforcements he received from the Macleods, the Grants, the Monroes, the Sutherlands, and the Guns, he was foon 2000 strong. At Edinburgh

burgh likewise, and at Glasgow, they began to raise men for the service of the government, with great chearfulness and success; so that two good regiments were completed, besides several independent corps; as will be seen more at large, when we speak of the measures taken by the government in North Britain,

to suppress the rebellion.

After the rebels had raised all the money they could on the town of Derby, they set about prosecuting their resolution of endeavouring to retire into Scotland by the same road they came; and accordingly marched, on the 6th of December 1745, to Ashburn, from whence they moved the next day to Leek, destroying, in their passage, whatever they judged might be of use to the king's forces that were in pursuit of them; and, shewing a warm spirit of resentment for the disappointments they had met with, thereby provoking the country-people to do them all the mischief they could. They carried with them a train of artillery, consisting of 15 small pieces of cannon, and one mortar.

On the 8th in the evening their vanguard reached Manchester; and the next morning the young Chevalier, and the main of his forces, came thither, where they were not received as they had been before; but, on the contrary, the town's people, or at least the mob, gave them some pretty visible marks of their dislike; which was instantly punished by an order or precept in the name of the Chevalier, and signed and sealed by Mr. Murray his secretary, directed to the constable and collector of the land-tax for the towns of Manchester and Salford, requiring them to collect and levy, by the next day at noon, the sum of 2500s. to be paid to the said Mr. Murray, with a promise of repayment, however, when the country should be peaceably settled under his government.

On the 10th, they continued their march by Pendleton-Pole, towards Leigh and Wigan, which last place

they

His

they reached on the 11th, and pushed on from thence to Presson the next day; being extremely apprehenfive of finding themselves surrounded in that neighbourhood. On the 13th in the morning, they quitted Preston, and continued their route to Lancaster; and, on the 14th, they moved from thence to Kendal, which they entered about ten in the morning, and where they met with a bad reception; for the town's people fired upon their huffars, killed one, and took two prisoners. Their vanguard continued their march from thence to Shap in their way to Penrith; but, feeing the beacons every where lighted, and being informed that it was done to raile the country, and that the people were disposed to fall upon them on all sides, they thought proper to return to Kendal, which they accordingly did about two in the morning.

On the 15th, the Pretender, with all his forces, arrived there, and began to march from thence for Penrith on the 16th, by break of day; lord George Murray commanding the rear-guard, as he had done during the whole march. They intended to have reached Penrith that night, but, finding it impracticable, they thought fit to halt at Shap, where we shall leave them for the present, that we may better give the reader an account of the motions of the king's forces,

in order to overtake them.

His royal highness the duke of Cumberland, having certain intelligence, on the 7th of December, that the Highlanders had begun to move northward, put himfelf the next morning at the head of all the horse and dragoons, with 1000 volunteers, in order to follow the rebels from Merriden, and stop them till the soot came up. On the 9th, Sir John Ligonier marched with the brigade of guards, and the regiment of Semtil, to Litchfield, pursuant to his royal highness's instructions.

On

On the 10th, the duke arrived at Macclesfield with two regiments of dragoons, having a body of 1000 foot at no great distance, from whence he fent orders to Manchester, and other parts of the country, that nothing might be neglected, that could contribute to retard or distress the enemy. On the 11th, major Wheatley was detached with an advanced party of dragoons to harrass the rear of the rebels, and to join the light-armed troops that were expected from the other

army.

Marshal Wade having received certain intelligence, of the proceedings of the rebels, and of the fituation of his majefty's forces under the command of his royal highness, held, on the 8th of December, a great council of war at Ferrybridge, to consider of the most effectual means for cutting off the Highlanders in their retreat; and in this council of war it was refolved to march directly by Wakefield and Hallifax into Lancashire, as the most likely way of intercepting them. But, arriving at Wakefield on the 10th, and having advice that the main body of the rebels was at Mon. chefter, and their vanguard moving from thence towards Preston, his excellency, finding that it was now impossible to come up with them, judged it unnecessary to fatigue the forces by hard marches; and therefore detaching major general Oglethorp, on the 11th, with the cavalry under his command, he began his march with the rest of his forces, for Newcastle.

On the 13th, a great body of the horse and dragoons, that were, as has been said, under major-general Oglethorpe, arrived at Presson, having marched 100 miles in three days, over snow and ice; which was a noble testimony of zeal and spirit, especially in the new-raised sorces. His royal highness arrived about one at the same place, and immediately gave his orders for continuing the pursuit of the rebels with the utmost diligence. On the 14th, accordingly, general

Oglethorpe advanced towards Lancaster, which place they reached on the 16th; general Oglethorpe continuing his pursuit at the heels of the rebels. On the 17th, the major-general was at Shap, and his royal highness entered Kendal, having now more hopes of coming up with the enemy, than at any time during the march; and the dispositions made by the duke for this purpose, were such, as shewed not only the greatest intrepidity, but also the utmost penetration, and

military capacity.

On Wednesday the 18th of December in the evening, part of the cavalry, with his royal highness, came up with the rebels, after ten hours march, a little beyond Lowther hall, which they had quitted on the approach of the king's forces, and threw themselves into the village of Clifton, about three miles from Penrith; where they had great advantages from the fituation of the place, and from some decayed broken walls, which served them instead of retrenchments. His royal highness, however, caused the village to be immediately attacked, by the first force that came up. which were the king's own regiment of dragoons, and part of the duke of Kingston's horse, who behaved extremely well upon this occasion; and in an hour's time drove them out of the place, though a very frong and defensible post.

While their rear-guard was engaged with the king's forces at Clifton, the main body of the rebels were at Penrith, and so apprehensive of being overtaken, that at ten o'clock at night they ordered their artillery and baggage to advance towards Carliste; and on the 19th in the morning, they entered that city, excessively fatigued, and in much consusion. The rebels did not continue long there, but contented themselves with putting a fort of garrison into the place, compose of between 4 and 500 men, most of them being those that had joined them in England, and

which

which they had formed into a corps under the title of

the Manchester Regiment.

The main body of their army continued their march towards Scotland, passing the river E/k, though very high, which cost many of them their lives; and on the 20th and 21st they again entered North Britain, leaving those they had thrown into Carlifle to shift for themselves as well as they could, and without any hopes of fuccour. These pretended, at first, that they would make an obstinate defence; and, having most of their artillery with them, they mounted them on the walls, took possession of the castle, and carried into it all the provisions they could find, leaving the inhabitants little or none to fustain themselves with; so that they were in the utmost distress, being able to draw no relief from the adjacent country, because the people were fenfible, that whatever they fent them would be taken from them by the rebels. They did not, however, continue long in this deplorable condition, being relieved from it by the speedy arrival of the king's forces, who foon put an end to the dispute, and restored the people of Carlifle to the king's protection, the rebels in the castle being obliged to surrender at discretion; but not till cannon was brought up, and the necessary dispositions made for besieging them*.

While the rebels were doing the business of the French in the North, vast preparations were still made on the coast of France, and French Flanders, for invading this kingdom; and the informations which the government received of their embarkation, particularly at Dunkirk, induced his majesty to give such directions as were necessary for appointing proper alarmposts at which the troops were to assemble, and such

fignals as were requisite for assembling them; and at the same time a proclamation was issued, commanding all officers, civil and military, to cause the coasts to be carefully watched, and, upon the first approach of the enemy, to direct all horses, oxen, cattle, and other provisions, to be driven and removed 20 miles from the place where the enemy should attempt to land; and such regiments of regular troops as were at this time quartered in and about London, were ordered down to the coasts of Kent and Sussex.

These wise and timely precautions, joined to the zeal and spirit shewn by the gentlemen, clergy, and other inhabitants of the maritime counties, had so good an effect, together with the diligence used by the officers of his majesty's navy, that served on board the squadron then in the channel, that the designs of the French were totally deseated, notwithstanding they

frequently changed their schemes.

As lord fibn Drummond, lord Lewis Gordon, and the rest of the rebel chiefs in Scotland, were all this time labouring with great diligence, as well as much violence, to draw together a considerable force, in order to join the Pretender on his return into that country, the king's loyal subjects there shewed the greatest zeal and spirit, in exerting their utmost endeavours to raise troops to oppose them. The city of Glasgow particularly distinguished itself, upon this occasion, by levying 15 companies of 60 men each, at their own expence; and having completed them by the beginning of the month of December, they marched from thence, under the command of the earl of Hume, for Stirling.

The city of Edinburgh also, having received his majesty's licence for that purpose, raised 1000 men for the king's service; and the earl of Loudon, with the forces under his command, marching from Inverness, obliged a body of the rebels to raise the blockade of

Fort

Fort Augustus, which they had formed under the com-mand of the son of lord Lovat; and, at the same time, the Macleods and Monroes scoured all the North should of the rebel parties, as far as to within 12 miles of ing in Morth Britain to the close of the year 1745, when the

North Britain to the close of the year 1745, when the sidered rebels, having been obliged to fly out of England, began again to gather strength in the West of Scotland, and to resume their design of attacking Stirling castle.

The rebels, having passed the river Esk, divided sinto two bodies; the lesser, consisting of about 2000 keeping men, marched, on the 20th of December, to Ecclese kan, and from thence the next day to Mossa. The larger body, of about 4000, proceeded to Annan, near the stand, having obliged the town of Dumsries; marched and, having obliged the town of Dumsries to pay them on the 1100s. and to give hostages for 900s. more, they arrived on the 25th at Glasgow.

In the mean time the northern rebels, under lord would at John Drummond, lord Lewis Gordon, the master of she had Lovat, and some other of their chiefs, having with sonour. them some artillery, ammunition, and money, which had been landed from on board some Spanish privaletters, arrived at Perth, which they fortisted for a place gain su of arms, fitting out an armed sloop there, as they did ore, the Hazard, which they had lately taken, and another from with story privateer at Montrose.

Rout privateer at Montrofe.

The young Pretender entered Glasgow at the head ant-gen of all his forces, and had thereby the inhabitants at edded so the second second from the regiment they had raised being at the forth Edinburgh, and they entirely defenceles. But, how islodge to sensible soever they might be of their danger, they did y with nothing contrary to their duty to deliver themselves my. On the contrary they shewed very visible signs of for twice be row and sadness; and the Chevalier, though he of thered in ten appeared in public, was scarce attended so much is shown as by a mob. ith fom as by a mob.

om.

It is not at all furprifing, that the behaviour of the ubels at Glufgow, these provocations considered, ame should be rather worse than in other places; and so it orth es of was. They found themselves in a rich city, abounding in whatever they wanted; and therefore they conthe fidered it as a magazine, and began to furnish thembe- felves immediately with broad-cloth, tartan, linen, land, thoes, and flocking, to the amount of 10,000/. Sterling;

the shoes, and stockings, to the amount of 10,000s. sterling; so that, by this means, the Pretender in a manner newded doathed his army, which proved a great means of seeping them together; otherwise, in all probability, the greater part of them would have dispersed.

On the 3d of January, having finished their business at Glasgow, and gleaned up what they could, they marched to Kilfyth; the next day to Bannockburn; and them the 5th, having now the best part of their forces together, they summoned the castle and town of Sterling of surrender. General Blakeney answered, that he reload to the had lived, he was determined to die, a man of with strength, after some time spent in treaty, surrendered; which trength, after some time spent in treaty, furrendered; privand the rebels entered it upon the 8th, when, having a place gain summoned the castle, to as little purpose as being they did bre, they took a final resolution of besieging it in nother orm with what artillery they had.

The king's forces, under the command of lieuteness and the series of the castle. Part ing at the forces under major-general Huske, prometically with most of the cavalry belonging to the rebel selves my. On the 13th, the forces, appointed for this of some twice began to move towards Linlithgow, which they

felves my. On the 13th, the forces, appointed for this of for rvice began to move towards Linlithgow, which they he of stered in the evening, at the very instant the earl of much limarnock was marching in on the side next Falkirk, ith some of his people; but, having early intelli-

gence of the general's purpose and nearness, he retired, with some precipitation, to the main body of the

rebel army before Stirling.

On the 16th, general Huske, with the forces under his command, took possession of Falkirk, and was followed thither, foon after, by general Hawley, and the rest of the army, who determined, as next day, to attack the rebels; but being informed, that the rebels were in motion towards him, and endeavoured to gain some rising grounds near the Moor of Falkirk, he formed his army, and advanced in good order, the dragoons on the left, and the foot in two lines. As foon as they came within 100 yards of the enemy, the dragoons were ordered to fall on fword in hand, and the two lines of infantry to advance. But, before they could put these orders in execution, the rebels made a very smart fire, which threw the dragoons into some disorder, and they the foot, who made only one irregular fire, Barrel's and Ligonier's battalions excepted; who being presently rallied by brigadier Cholmondeley, were attacked afterwards by the rebels, whom they repulled, and at length drove them quite out of the field.

In the mean time major general Huske, with wonderful prudence and presence of mind, drew together and sormed a body of foot in the rear of these two regiments; which the rebels seeing, did not venture to renew the attack. General Mordaunt, taking advantage of this delay, rallied and formed the rest of the troops, in which the officers, who in general behaved well, affisted; which prevented their prosecuting their first advantage.

There were feveral unforeseen, and, indeed, inevitable accidents, that contributed greatly to, or rather might be said to have been the sole occasion of, the rebels gaining this advantage. In the first place, there was some difficulty and consusion in forming the

and

king's troops, which was succeeded by another unlucky accident; fome of the battalions fired without orders, which occasioned a great confusion among the dragoons. But the greatest misfortune of all was, that, just as the army began to move, there came on a violent storm of wind and rain, which hindered the men from feeing before them; and many of their firelocks were so wet, that it is thought scarce a fifthpart of them were of use; add to this, that they had not the benefit of their artillery; for, the weather having been two days very wet, and there being a very steep hill to climb, they could not get up time enough to do any service in the action; and the commander of the train having quitted it, for which, afterwards, he was, as defervedly as difgracefully, broke, most of the people who belonged to the horses rode away with them; fo that when the troops retired to their camp, they found it extremely hard to carry off their cannon to Linlithgow, to which the king's army retired, rather to avoid the inclemency of the weather, than in fear of the rebels.

The rebels returned to Stirling on the 18th in the afternoon, and again fummoned the castle; but general Blakeney repeated what he had before told them, that he had been always looked upon as a man of honour, and they should find he would die so. Upon this they began to erect two new batteries, one upon Gawan-hill, within 40 yards of the castle, and one upon Lady's-hill, upon which they proposed to mount what battering cannon they had, which were but 7 pieces, viz. two 18 pounders, two 16 pounders, and three 12 pounders; and, while this was doing, they continued to fire upon the castle with small arms, which did little or no mischief, though at the same time it exposed their men extremely, and they suffered by the fire of the castle very severely; which put them more and more out of humour with the fiege;

and what contributed to encrease their uneafiness was the great want of provisions, which obliged them to fend out parties on all sides, to carry off what meal

they could find in any part of the country.

The greatest part of their army being returned into the neighbourhood of Falkirk, they sent away their prisoners to Down-Cassle on the 25th, except the officers: and the Hazard sloop, which was now resitted, was ordered to sail to France to carry the news of this advantage, which they magnified extremely, as appeared by the accounts that were printed of it at Paris.

On the return of the king's army to Edinburgh, a very strict enquiry was made into the loss sullained by the late action, which appeared to be, officers ex-

cepted, very fmall.

It happened very luckily, that, as this action proved more fatal to the officers than to the private foldiers, it proved as fortunate to a great many others; for the rebels having fent most of the officers that were taken prisoners at Preston-Pans to Glamis, Coupar, and Lessy, when they were drawing together their forces about Stirling, the loyal inhabitants of Dundee, and other places, formed a design of rescuing them, and conducting them back to Edinburgh, which they executed with great spirit and diligence; and they arrived at that city on the 19th, the very next day after the army returned thither from Linkithgow.

When the news of this battle reached London, it made it necessary to provide for the immediate extinction of so dangerous a slame, by sending down a sufficient number of sorces, not only to render the army in Scotland more formidable than before, but to encrease its strength to such a degree, as to free the nation from any apprehensions of its consequences, in case the enemy should grow more numerous, or the French and Spaniards persist in their design of attempting an invasion for their support, in any part of his

majesty's dominions. It was with this view, that a resolution was taken of embarking the Hessian troops in British pay, then in the neighbourhood of Antworp, for Scotland; and it was also thought convenient, that to restore the spirit of the soldiers, to extinguish all animosities, and encourage the well-affected in North Britain, his royal highness the duke should immedi-

ately go down thither.

The troops seemed to be extremely mortified at the miscarriage at Falkirk, and shewed an earnest desire to repair it by marching again to attack the rebels; for which the necessary preparations were instantly made; and the army, in a very sew days, was in every respect, in a better condition, and better provided, than before. On the 30th in the morning, to the great surprize and joy of the army, his royal highness the duke of Cumberland arrived at Edinburgh, after a journey amazingly expeditious, considering the rigour of the season. The sight of the duke banished all remembrance of the late untoward accident, and the troops shewed uncommon ardour to be led, bad as

the weather was, into the field again.

His royal highness reviewed the forces the very next day, and marched them in pursuit of the rebels. He quartered that night at Linlithgow with eight battalions; brigadier Mordaunt, with fix battalions more, was at Burrowstounes; the dragoons lay in the adjacent villages; and colonel Campbell, with the Argyleshire men, took post in the front of the army, towards the Avon. There was, at that time, a confiderable body of the rebels at Falkirk, who immediately retired towards Torwood. The next morning his royal highness made the necessary dispositions for prosecuting his march, when he received advice, that the rebels were actually repassing the Forth with all the diligence imaginable; which news were foon after put out of dispute by the noise they heard of two great re-VOL. IV. ports

ports like the blowing up of magazines; upon which brigadier Mordaunt was detached with the Argyleshire. men, and the dragoons, to harrass the rebels in their The brigadier, with the troops under his command, arrived at Stirling late that evening, where they found the rebels had abandoned their camp, with all their artillery, and had blown up a great magazine they had of powder and ball in the church of St. Ninian; and that with fo little care or differetion. that feveral of the country people were buried in the ruins. They likewise left behind them all the wounded men they had made prisoners in the late action, and about 20 of their own fick men; but it was fo late when the king's forces arrived, that it was judged needless to continue the pursuit.

On the 2d of February, about one in the afternoon, his royal highness entered Stirling, and was pleased to testify his entire fatisfaction with respect to the gallant defence made by general Blakeney. In the mean time, the rebels were occupied in making all the difpatch in their power, that they might be entirely out of reach before Stirling bridge could be repaired for

the paffage of the army.

Part of them took the road by Tay-bridge, towards the hills; the rest, consisting of lord Lewis Gordon's men, the remains of the French, those commanded by lord-Ogilvie, and the few horse they had, got into Perth the very night that brigadier Mordaunt arrived at Stirling; and though they had taken a great deal of pains in throwing up feveral works for the fecurity of that place, yet they began to abandon it, and to continue their march northward the next morning. Lord John Drummond, with the remains of the Scots and Trifb that came from France, made the best of their way towards Montrose, and, on the 3d of February the town of Perth was totally evacuated. They less behind them there 13 pieces of iron cannon, 8 and 12 pounders

It is evident, that this retreat of theirs was made with the utmost hurry and precipitation; and yet it was barely made in time: for on the 4th, by fix in the morning, the bridge of Stirling was repaired, fo that the army passed over it; and the advanced-guard, consisting of the Argyleshire Highlanders, and the dragoons, marched that night as far as Crief; but the foot were cantoned in and about Dumblain, where the duke took up his quarters that evening, and the next day the advanced guards took poffession of Pertb. We may, without danger of incurring the fuspicion of adulation, observe, that scarce any history can shew a more illustrious instance of the effects of a general's reputation than this before us, fince, in the space of a single week, his royal highness quitted the court of the king his father, put himself at the head of the forces in Scotland, and faw the enemy flying with precipitation before him.

The rebels were very sensible, how much the news of this retreat of theirs, which had so much the refemblance of a slight, would alarm their friends both at home and abroad; and therefore they dispersed several papers to assign such reasons for it, as they judged might give it a fair appearance; alledging, that their men were so loaded with booty, that they were constrained to let them carry it home; that, aster so fatiguing a campaign, some recess was necessary; and that, when they had refreshed and recruited their sorces, they would not fail to make a fresh irruption

into the Lowlands in the spring. But whatever reafons they might pretend, the true motives of their conduct were these: they judged, that, by drawing the war into the Highlands, they should make it extremely burdensome and uneasy to the king's forces, obtain frequent opportunities of harraffing and furpriling them, and have a fair chance for rendering them weary of following them through countries, where they thought it impossible for them to have magazines, and other requifites for an army of their force. In the next place, they perfuaded themselves, that the removing the war into the Highlands, and the report they spread of the severities that would be inflicted by the king's troops, must keep their men together, which they now found a very difficult task; and would also contribute to encrease their strength. They had, besides these, another reason; which was, the giving a fair opportunity to their friends the French, of attempting an invasion in the South; which they flattered themselves would afford such a diverfion as would free them from all their difficulties. properly And to all this might be added, that they had formed don was t a project of making themselves matters of the chain or most of line of fortifications, that ran along the North of Scotland from Fort William to Inverness; and thereby fecure the country behind them, and, at the same time, afford means for the French and Spaniards to that impresent the state of the same stat ineffectual performances.

His royal highness the duke of Cumberland, who panies, un penetrated all their views, took the most proper me George, we though the contribution of the defeating them mity. But He gave orders for the army to march by different contributions (but in such bodies as prevented all danger of surprize) to Aberdeen, where he proposed to fix his band quarters to raise marchines. head-quarters, to raise magazines, and to receive such

faccours and supplies, as from time to time might be required, by fea, from the South. As the Heffian troops were now in Scotland, his toyal highness took care to dispose of them, and some other bodies of English troops, at Porth, Dunkeld, the castle of Blair, castle of Menzies, and other places; by which he effectually fecured the paffage into the Lowlands, and put it out of the power of the rebels to return that way into the South. General Campbell, with the Argylesbire men, undertook the security of Fort William, a place at that time of infinite importance, as it fecured another passage through the West of Scotland, by which the rebels might again have made their way into England. These precautions taken, his royal highness set out in person for Aberdeen, where he ar-

rived on the 28th of February.

The rebels, in profecution of their defigns, made it their first care to become masters of Inverness, a town of pretty confiderable trade on the east-fide of the Highlands, with a good part, and a small fortress, fometimes called the castle of Inverness, but more properly Fort George, to defend it. The earl of Loudon was then there with a body of about 1500 men, most of them hastily raised for the service of the government; with whom, upon the approach of the rehels to within a very small distance of the place, he marched out, in order to act offensively; but finding to that impracticable, and that the enemy were much stronger than he expected, he judged it proper to retreat, which he did on the 20th of February, without the loss of a man, leaving two independent comwho panies, under the command of major Grant, in Fort me George, with orders to defend it to the last extremity. But, it feems, these orders were but indiffer-rent ently obeyed; for the place was soon after surren-dered to the rebels; upon which the Chevalier re-his moved his quarters thither, having with him about R 3

4000 men. This fuccefs, and the news of furprifing fome parties of well-affected Highlanders, not far from the castle of Blair, so much raised their spirits, that they were resolved to prosecute their original defign of reducing the Chain; and accordingly they next attacked Fort Augustus, a very small place, and only important by its situation between Inverness and Fort William, in which there was a very small garrison, of no more than three companies of Guise's regiment, under the command of major Wentworth; fo that it was speedily reduced, and as speedily demolished, which was the fame fate that Fort George had met with: a clear demonstration, that they did not think it necessary to have any garrison in that part of the country. But as they were still incommoded by the neighbourhood of the earl of Loudon, who lay at their back, with only the Firth of Murray between them; the duke of Perth, the earl of Cromertie, and some of the rest of their chief commanders, resolved to attempt the furprifing that earl by the help of boats, which they drew together on their fide of the water; and, taking the advantage of a fog, executed their scheme so effectually, that, falling upon the king's forces under the earl's command unexpectedly, they cut off some, made a few officers prisoners, and obliged lord Loudon to retire with the rest out of Satherland. But though these small advantages served to make a noise, and to keep up the spirits of their party, yet they did them little real fervice; and their money beginning to run fhort, and supplies both at home and abroad failing their expectations, caused great divisions and heart burnings amongst them.

Mean time his royal highness the duke, notwith-standing the rigour of the teason, and badness of the roads, took care to distress the rebels as much as was possible; for the very day after he joined the army, he detached the earl of Ancram with 100 dragoons,

On the 16th of March, having intelligence that Ray Stuart, with about 1000 foot, and 60 huffars, was at Strathbagie, his royal highiness ordered major-general Bland to drive them from thence; and, at the fame time, ordered brigadier-general Mordaunt, with four battalions, as many pieces of cannon, to march, and support the major-general, if there should be occafion. On the 17th, the major-general advanced to Strathbogie, and was almost within fight of the place before the rebels had any notice of his approach; which alarmed them to fuch a degree, that they quitted their post, and retired with great precipitation towards Keith. But this fuccess was attended with some little check; for general B and having detached a captain of Highlanders, with 70 of his men, and 30 of King flon's horse, with orders to clear that place, and then rejoin the army, they, contrary to his directions, ventured to quarter there that night; which gave the rebels an opportunity of furprising them, and of cutting in pieces most of the Campbells, who were quartered in the church-yard; but the cornet who commanded King flon's horse, retired, with some of those under his command.

The rebels, being very well apprifed of the great importance of Fort William (the taking of which R 4 would

would have made them mafters of the whole extent of the country from east to west, and from sea to sea, and would, befides, have opened them a paffage into Argyleshire, and the west of Scotland), resolved to leave nothing unattempted, that might contribute to the conquest of this fortress, and therefore ordered brigadier Stapleton, with a large body of their best men, most of them engineers, and as good a train as they could furnish, to attempt it: but, the place being defended by captain Scot, an officer of courage, fidelity, and experience, they were obliged to raife the fiege on the 3d of April, about a month after they had begun to move against it; which they did with great precipitation, bending their march to Inverness. Upon which, captain Scot detached a party of the garrison, who fecured eight pieces of cannon, and feven mortars, which the enemy had lest behind them.

They had before this received a very great difap-

pointment, as follows:

We have already observed, that they were in great distress for money, and other necessaries, and waited impatiently for a supply from France; which they hoped, notwithstanding the miscarriage of so many vessels that had been sent them, would soon arrive on board the Hazard sloop; to which they had given the name of the Prince Charles Snow, and which they had intelligence was at sea, with a considerable quantity of gold on board, and a good number of experienced officers and engineers, who were very much wanted.

On the 25th of March, this long looked-for veffel arrived in Tongue Bay, into which she was followed by his majesty's ship the Sheerness, commanded by captain Obrien, who immediately attacked her. In the engagement the Hazard sloop had a great many men killed, and many more wounded; so that, not being able to maintain the fight, she ran ashore on the shallows,

liam, ti lord Ge caftle of duke of in whice command ther blo precipit shallows, where the Sheerness could not follow her; and there she landed her men and money. The place on which she ran on shore (after being chased 56 leagues) was in the lord Rea's country; and it happened there was then at his lordship's house, his son captain Mackay, Sir Henry Munro, lord Charles Gardon, captain Macleod, and about 80 men of lord Loudon's regiment, who had retired thither, when the rebels attacked them by boats, as has been before related.

These gent'emen, having animated the soldiers to attack, notwithilanding the superiority of numbers, those who landed from the Prince Charles snow, obtained, after a short dispute, a complete victory, with little or no loss on their side. Besides five chests of money, and a confiderable quantity of arms, they took 156 officers, foldiers, and failors, prisoners, with whom they embarked on board the Sheerness man of war, and failed directly for Aberdeen, together with another prize captain Obrien had taken in the The money, befides one cheft that was Orkneys. missing, and what had been taken out of another that was broken, amounted to 12,500 guineas; and amongst the prisoners there were 40 experienced officers, who had been long either in the French or Spani/b service.

At the same time that the rebels employed so confiderable a part of their forces in attacking Fort William, they sent another body, under the command of lord George Murray, to make a like attempt upon the castle of Blair, the principal seat of his grace the duke of Athol, but a place of no great strength, and in which there was only a small garrison, under the command of Sir Andrew Agnew; which siege, or rather blockade, they raised with the same hurry and precipitation, on the approach of the earl of Crawford,

R 5

as they did that of Fort William, upon the very fame

day, and from the fame motives.

His royal highness, having before made the necessary dispositions, marched from Aberdeen on the 8th of April 1746, in order to find out the rebels; who now had united all their forces, being resolved to make a stand at Inverness. He encamped on the 11th at Cullen, where my lord Albemarle joined him; and the whole army the next day marched to the Spey, and passed it with no other loss than of one dragoon, and four women, who were drowned through hurry and indiscretion. Major-general Huske was detached in the morning with 15 companies of grenadiers, the royal Highlanders, and all the cavalry, and two pieces of cannon; and his royal highness went with them himself.

On their first appearance, the rebels retired from the fide of the Spey towards Elgin; whereupon the duke of Kingston's horse immediately forded over, suftained by the grenadiers and the Highlanders; but the rebels were all got out of their reach before they The foot waded over as fast as they arcould pass. rived; and though the water came up to their middles, they went on with great cheerfulness. The rebels on the other fide of the Spey appeared to be between 2 and 3000; but they did not make any opposition, either while the king's troops were passing, or when part of them had passed, and were on the other side of the river; for which conduct of theirs it feems very difficult to affign any reason, unless it were, that their officers, being fentible that the artillery of the king's troops would fecure their paffage, were unwilling to run the risk of dispiriting their men by an unsuccessful attempt of that kind; and therefore chose not to dispute the passage of the Spey; hoping rather to deceive their men into an opinion, that they should be well

The French auxiliaries all furrendered prisoners of war; amongst whom were brigadier Stapleton, the marquis De Guilles, whom the Highlanders called the French ambassador, lord Lewis Drummond, and about 42 more. The loss on the side of the king's army was very inconsiderable; the only persons of note killed, were lord Robert Kerr, captain in Barrel's regiment, captain Grosset, of Price's, captain John Campbell, of Loudon's, and captain Colin Campbell of the militia; besides these, 50 private men killed, and 250 wounded.

The number of all the persons taken in this signal victory were 222 French, and 226 rebels; all their artillery and ammunition, with other military stores, and 12 colours likewise, fell into the hands of the victors. The earl of Kilmarnock was taken in the action; lord Balmerino, at first reported to be killed, was taken soon after; and sour ladies that had been very active in the rebellion, were likewise seized at Inverness, viz. lady Ogitvie, lady Kinlock, lady Gordon, and lady Mackintosh.

Immediately after the battle, brigadier Mordaunt was detached, with the volunteers, to the number of 900, into the Frasers country, in order to reduce all R 6 who

who should be found in arms there; and with the like view other detachments were made into other difaffected parts of the country; which put it entirely out of the power of the rebels ever to affemble afterwards in any body, capable of disturbing the peace of the country, being reduced to the necessity of separating into small parties, in order to shift the better for themselves - About the same time that the whole forces of the rebels were thus vanquished at the battle of Culloden, the earl of Cromertie, his eldest son, a great many officers of diffinction, and about 150 private men, were furprifed in the north, by a very small party of his majefty's loyal, subjects, who fent them prisoners on board his majesty's ship the Hound, captain Dove, from Sutherland to Inverness.

Thus the fiame of the rebellion, which, after being smothered for some time in Scotland, broke out at last with such force, as to spread itself into England, and not without reason alarmed the inhabitants even of the metropolis, was in a thort space totally extinguilhed by him who gave the first check to its force; and who perhaps alone was capable of performing this fervice to his country, to his father, and to his

king.

His royal highness, as he well deserved, had the thanks of both houses of Parliament sent him by their refrective speakers; to which he returned the most obliging answers. The two houses also addressed his majesty, fignifying their readiness to give his royal bighness such distinguishing marks of public gratitude as should be most agreeable to his majesty; who was graciously placed to recommend to them the fetling of an additional revenue upon his royal fon. And accordingly an additional revenue of 25,000%. per annum was fettled upon him, making 40,0001, per annum; his royal highness baving before but 15,000%. per annum. of robio of grounds respect of on While

While these grateful measures were pursuing above, his royal highness the duke took all the necessary precautions for effectually feattering the very embers of the late fire, that they might not be raked together again, or, by the addition of any fresh fuel, blown up into a new flame. With this view he fent detachments of well-affected Highlanders and regular troops, into the wildest countries belonging to the clans that had been in arms, where such as submitted were received to mercy, and such as stood out had their countries burnt; and at the fame time their cattle were driven away, that they might be the less able to fublist, and those cattle fold for the benefit of the foldiers in the king's army. These measures had very great consequences; the burning lord Lovar's and Cameron of Lochiel's houses had a great effect, and flruck much terror; fo that in a very short space of time there were scarce any parties of rebels to be heard of, and most of their chiefs surrendered, were taken, or found means to escape out of the island.

Among the first were the marquis of Tullibardin, who stiled himself duke of Athol, who died afterwards a prisoner in the Tower; Mr. William Murray, a near relation of the earl of Dunmore's, who was pardoned; the earl of Kelly, and the mafter of Lovat. As for lord Lovat his father, Mr. Murray of Broughton, and many more, they were taken at different times; but the duke of Perth, lord John Drummond his brother, lord Elcho eldest son to the earl of Wemys, and several of their affociates, made their escapes by sea in two French privateers, that were fent to carry off those who had been doing the bufiness of France at the expence of their honours and fortunes. Lord Pitfligo, and lord Lewis Gordon, retired the same way; and lord Ogilvie, with 13 or 14 more, shipped themselves in a small vessel for Norway, where, as soon as they arrived, they were feized by orders from the late king

of Denmark, but were afterwards released, retired into Sweden, and found means to get from thence into France. Lord George Murray also made his escape; but whither, or in what manner, we are not able to say.

As for the young Pretender himself, he found it much more difficult to withdraw than any of his adherents; which was the reason that he remained long behind them; and, as it may be expected that a more particular account should be given of his adventures, we shall endeavour it without any mixture of those romantic tales that have been published on that

subject.

He was in the body of referve at the battle of Culloden, where he is faid to have had an horse shot under him; but while the French were treating with the king's troops, in order to be received prisoners of war, he mounted a fresh horse, and made his escape. That very evening, being the 16th of April, he retired to the house of a factor of lord Lovar's, about 10 miles from Inverness; where, meeting with that lord, he Staid supper : after supper was over, he set out for Fort Augustus, and pursued his journey the next day to Invergarry, where he proposed to have dined; but finding no victuals, he fet a boy to fishing, who caught two falmon, on which he made an hearty meal, and continued waiting there for some of his troops, who had promised to rendezvous at that place; but, being disappointed, he resolved to proceed to Locharcige: he arrived there on the 18th at two in the morning, where he went to fleep, which he had not done for five days and nights; he remained there till five o'clock in the afternoon in hopes of obtaining some intelligence; but, gaining none, he fet out from thence on foot, and travelled to the Glen of Morar, where he arrived the 19th at four in the morning.

He fet out about noon the same day for Arrashaig, where he arrived about four in the afternoon. He

where the meeting to got into told a fries remained there about seven days, waiting for captain O'Neil, who joined him on the 27th, and informed him, that there were no hopes of drawing his troops together again in a body; upon which he resolved to go to Stornway, in order to hire a ship to go to France: the person employed for this purpose was one Donald M' Leod, who had an interest there. On the 28th he went on board an eight-oared boat, in company with Sullivan and O'Neil, ordering the people who belonged to the boat to make the best haste they

could to Stornway.

ti

800

k n

e

The night proving very tempestuous, they all begged of him to go back; which he would not do, but, to keep up the spirits of the people, he sung them an Highland fong: but, the weather growing worfe, on the 20th about feven in the morning, they were driven on shore on a point of land called Rushness, in the island of Benbecula, where, when they got on shore, the Pretender helped to make a fire to warm the crew, who were almost starved to death with cold. On the 30th, at fix in the evening, they fet fail again for Stornway; but, meeting with another storm, were obliged to put into the island of Scalp in the Harries, where they all went on shore to a farmer's house, passing for merchants that were shipwrecked in their voyage to the Orkneys; the Pretender and Sullivan going by the names of Sinclair, the latter paffing for the father, and the former for the fon. They thought proper to fend from thence to Donald M. Leod at Stornway, with instructions to freight a ship for the Orkneys. On the third of May they received a meffage from him, that a ship was ready.

On the 4th they fet out on foot for that place, where they arrived on the 5th about noon; and, meeting with Donald McLeod, they found that he had got into company, where, growing drunk, he had told a friend of his for whom he had hired the ship:

upon which there were 200 people in arms at Stornwar, upon a report that the Pretender was landed with 500 men, and was coming to burn the town: fo that they were obliged to lie all night upsn the moor, with no other refreshment than biscuit and brandy. the 6th they resolved to go in the eight-oared boat to the Orkneys; but the crew refused to venture, so that they were obliged to steer fouth along the coast side, where they met with two English thips, and this compelled them to put into a defert island; where they remained till the 10th, without any provision but

some falt fish they found upon the island.

About ten in the morning on that day they embarked for the Harries, and at break of day on the 1 th they were chased by an English ship, but made their escape among the rocks; about four in the afternoon they arrived at the island of Benbecula, where they flaid till the 14th, and then let out for the mountain of Currada in South Uift, where they staid till the militia of the Isle of Skie came to the island of Irasky; and then failed for the island of Uia, where they remained three nights, till, having intelligence that the militia were coming towards Benbecula, they immediately got into their boat, and failed for Lochbufdale; but being met by some ships of war, they were obliged to return to Lochagnart, where they remained all day, and at night failed for Lochbusdale, where they arrived, and staid eight days on a rock, making a tent of the fail of the boat. They found themselves there in a most dreadful situation; for, baving intelligence that captain Scot had landed at Kilbride, the company was obliged to separate, and the Pretender and O'Neil went to the mountains, where they remained all night, and foon after were informed, that general Campbell was at Bernary; fo that now they had forces very near on both fides of them, and were absolutely at a loss which way to move. In their road they met with a young lady, one mis M'Donald, to whom captain O'Neil proposed affifting the Pretender to make his escape, which at first she refused; but, upon his offering to put on woman's cloaths, the confented, and defired them to go to the mountain of Currada till she sent for them, where they accordingly staid two days; but hearing nothing from the young lady, the Pretender concluded she would not keep her word, and therefore resolved to send captain O'Neil to general Campbell, to let him know he was willing to furrender to him: but about five in the evening a message came from the young lady, desiring them to meet her at Rushness: being afraid to pass by the ford because of the militia, they luckily found a boat, which carried them to the other fide of Uia, where they remained part of the day, afraid of being feen by the country-people. In the evening they fet out for Rushness, and arrived there at twelve at night; but not finding the young lady, and being alarmed by a boat full of militia, they were obliged to retire two miles back, where the Pretender remained on a moor till O'Neil went to the young lady, and prevailed upon her to come to the place appointed at nightfal of the next day.

About an hour after, they had an account of general Campbell's arrival at Benbecula; which obliged them to remove to another part of the island, where, as the day broke, they discovered four sail close on the shore, making directly up to the place where they were, so that there was nothing left for them to do but to throw themselves among the heath. When the wherries were gone, they resolved to go to Clantonal's house; but when they were within a mile of it, they heard general Campbell was there, which forced them to retreat again; and soon after O'Neil was

taken.

There were no distinct accounts of what became of the Pretender after this, for the remainder of that month, and the greatest part of the next, except that he shifted about from place to place in woman's cloaths, and on the 28th of June went with the lady whom he attended in a little boat from South Uff to the Isle of Skie; there he refumed his own dress, and was carried by one Mackinnen in a boat to Raga, from whence he returned in a boat to Skie, and, after some Ray there, went back to the Continent. About the middle of July the government had certain intelligence of his croffing the hill of Morar in Lochaber, proceeding from thence to Badenoch; and on the 23d of July he was at Arifuig, and continued wandering about that country, in great diffres, during all the month of August.

On the 6th of September, two French privateers came upon the coast of Moidart, where the Pretender first landed, and made strict enquiry after him. Several of the Camerons, and some of the Macdonalds, repaired to them, and were employed to fearch for the Pretender; but it was the 17th before he came down to them, and was then dreffed in a short coat of black freize, with a plaid over it. He was in a bad state of health, and feemed to be brought very low by the fatigues he had gone through. He embarked the next day about noon, attended by the following persons: Mapher son of Clunie, with others of his clan, Cameron of Lochiel, Dr. Cameron his brother, Lodowick Cameron of Tor-cafile, Allan Cameron, and Macdonald of Lochgary, with many others whose names were not known. Macdonald of Barifdale, and his fon, went on board the ships before his arrival.

The ships on which they embarked were the Happy privateer of 30 guns and 300 men, and the Prince of Conti of 20 guns and 240 men, sitted out from St. Malo's by some of his own adherents. The were

He was so extremely satigued, and in so bad a state of health, that he rested a week before he went to Fontainebleau, where the French court then was, and where (if their gazettes deserve any credit) he met with a very kind reception, had a great sum of money given him, a large pension settled upon him, and mighty promises made him; but all this was only to serve the present turn, and to express the resentment of the French court for our attempt upon Port L' Orient. For, the situation of things changing, the disposition of the French court changed likewise; his pension was sorgotten, the complaints he made little regarded, and at last he was plainly given to understand, that the best thing himself and his brother could do, was to retire to Avignon; which they accordingly did.
